

## Power Systems Running Linux: Ubuntu Storage Management (PowerVM base)

**Duración: 2 Días**    **Código del Curso: LX042G**

### Temario:

This course is designed to teach the management of attached storage to Ubuntu Linux server on POWER8 systems. Class activities include interpreting storage configuration data, modifying device attributes, and troubleshooting Ubuntu storage issues in an IBM Power environment.

### Dirigido a:

The audiences for this training include Power systems support personnel, Ubuntu technical support individuals, Ubuntu developers, Ubuntu system administrators, system architects and engineers that may deal with Ubuntu running on an IBM Power system. This course provides students with an opportunity to work with Power Systems storage devices.

### Objetivos:

- On completion of this course, the student should be able to:
- Describe storage options for Ubuntu v16.04 running in a Power environment
- Interpret storage configuration data
- Implement storage devices with PowerVM
- VIOS
- Fibre Channel
- iSCSI
- Differentiate native Linux and hardware RAID solutions
- Validate configuration options
- Design solutions for attaching storage resources to a Ubuntu host

### Prerequisitos:

Students attending this course should have a basic background in Ubuntu systems administration and / or troubleshooting. These are skills taught in the course Power Systems Running Linux: Ubuntu Server Administration (PowerVM Base) (LX041G)

### Siguientes cursos recomendados:

- Essentials of PowerVM (LX024G)
- Power Systems Running Linux: Ubuntu Server Administration (PowerVM Base) (LX041G)
- Power Systems Running Linux: Performance Management (PowerVM Base) (LX034G)

### Contenido:

Day 1

- Unit 1 – Power Systems storage options

Exercise 1 – Navigating lab environment

- Unit 2 – Device naming and file system management

Exercise 2 – Managing devices

Day 2

- Unit 3 – SAN attached devices and Multipath IO

Exercise 3 – Multipath IO

- Unit 4 – Logical Volume Management

Exercise 4 – LVM Operations

---
