Implementing and Operating Cisco Data Center Core Technologies

Duration: 5 Days Course Code: DCCOR Version: 1.0

Overview:

The Implementing and Operating Cisco Data Center Core Technologies course helps you prepare for the Cisco CCNP Data Center and CCIE Data Center certifications and for advanced-level data center roles. Learn to master the skills and technologies you need to implement data center compute, LAN and SAN infrastructure. Understand the essentials of automation and security in data centers. Gain hands-on experience with deploying, securing, operating, and maintaining Cisco data center infrastructure including: Cisco MDS Switches and Cisco Nexus Switches; Cisco Unified Computing System™ (Cisco UCS®) B-Series Blade Servers, and Cisco UCS C-Series Rack Servers.

This course, including the self-paced material, helps you prepare to take the exam, Implementing Cisco Data Center Core Technologies (300-601 DCCOR), this leads to the new CCNP Data Center, CCIE Data Center, and the Cisco Certified Specialist - Data Center Core certifications. The exam will be available beginning February 24, 2020.

Target Audience:

Individuals looking for the knowledge and skills required to implement, secure and automate network, compute and storage infrastructures.

Objectives:

- After completing this course you should be able to:
  - Implement security features in data center
  - Implement routing and switching protocols in Data Center environment
  - Implement overlay networks in data center
  - Introduce high-level Cisco Application Centric Infrastructure (Cisco ACI™) concepts and Cisco Virtual Machine manager (VMM) domain integration
  - Describe Cisco Cloud Service and deployment models
  - Implement Fibre Channel fabric
  - Implement Fibre Channel over Ethernet (FCoE) unified fabric
  - Implement software management and infrastructure monitoring
  - Implement Cisco UCS Fabric Interconnect and Server abstraction
  - Implement SAN connectivity for Cisco Unified Computing System™ (Cisco UCS®)
  - Describe Cisco HyperFlex™ infrastructure concepts and benefits
  - Implement Cisco automation and scripting tools in data center
  - Evaluate automation and orchestration technologies
  - Implement Fibre Channel over Ethernet (FCoE) unified fabric

Prerequisites:

Attendees should meet the following prerequisites:

- Familiarity with Ethernet and TCP/IP networking
- Familiarity with SANs
- Familiarity with Fibre Channel protocol
- Identify products in the Cisco Data Center Nexus and Cisco MDS families
- Understanding of Cisco Enterprise Data Center architecture
- Understanding of server system design and architecture
- Familiarity with hypervisor technologies (such as VMware)

Testing and Certification

Recommended as preparation for the following exam:

- 300-601 - DCCOR - Implementing Cisco Data Center Core Technologies

Passing this exam will provide you with the Cisco Certified Specialist - Data Center Core Certification and count towards the New CCNP Data Center Certification - To achieve the new CCNP Data Center Certification you will also need a CCNP Data Center concentration.
Follow-on-Courses:

In order to achieve the new CCNP Data Center Certification you will also need to pass a concentration exam the available concentrations are:

- DCID - Designing Cisco Data Center Infrastructure
- DCIT - Troubleshooting Cisco Data Center Infrastructure
- DCAC9K - Configuring Cisco Nexus 9000 Series Switches in ACI Mode
- DCMDS - Configuring Cisco MDS 9000 Series Switches
- DCAUI - Implementing Automation for Cisco Data Center Solutions
Content:

Implementing Data Center Switching Protocols*
- Spanning Tree Protocol
- Port Channels Overview
- Virtual Port Channels Overview

Implementing First-Hop Redundancy Protocols*
- Hot Standby Router Protocol (HSRP) Overview
- Virtual Router Redundancy Protocol (VRRP) Overview
- First Hop Redundancy Protocol (FHRP) for IPv6

Implementing Routing in Data Center*
- Open Shortest Path First (OSPF) v2 and Open Settlement Protocol (OSP) v3
- Border Gateway Protocol

Implementing Multicast in Data Center*
- IP Multicast in Data Center Networks
- Internet Group Management Protocol (IGMP) and Multicast Listener Discovery (MLD)
- Multicast Distribution Trees and Routing Protocols
- IP Multicast on Cisco Nexus Switches

Implementing Data Center Overlay Protocols
- Cisco Overlay Transport Virtualization
- Virtual Extensible LAN

Implementing Network Infrastructure Security*
- User Accounts and Role Based Access Control (RBAC)
- Authentication, Authorization, and Accounting (AAA) and SSH on Cisco NX-OS
- Keychain Authentication
- First Hop Security
- Media Access Control Security
- Control Plane Policing

Describing Cisco Application-Centric Infrastructure
- Cisco ACI Overview, Initialization, and Discovery
- Cisco ACI Management
- Cisco ACI Fabric Access Policies

Describing Cisco ACI Building Blocks and VMM Domain Integration
- Tenant-Based Components
- Cisco ACI Endpoints and Endpoint Groups (EPG)
- Controlling Traffic Flow with Contracts
- Virtual Switches and Cisco ACI VMM

Describing Data Center Network Infrastructure Management, Maintenance, and Operations*
- Time Synchronization
- Network Configuration Management
- Software Updates
- Network Infrastructure Monitoring

Explaining Cisco Network Assurance Concepts*
- Need for Network Assurance
- Cisco Streaming Telemetry Overview

Implementing Fibre Channel Fabric
- Fibre Channel Basics
- Virtual Storage Area Network (VSAN) Overview
- SAN Port Channels Overview
- Fibre Channel Domain Configuration Process

Implementing Storage Infrastructure Services
- Distributed Device Aliases
- Zoning
- N-Port Identifier Virtualization (NPIV) and N-Port Virtualization (NPV)
- Fibre Channel over IP
- Network Access Server (NAS) Concepts
- Storage Area Network (SAN) Design Options

Implementing FCoE Unified Fabric
- Fibre Channel over Ethernet
- Describing FCoE
- FCoE Topology Options
- FCoE Implementation

Implementing Storage Infrastructure Security*
- User Accounts and RBAC
- Authentication, Authorization, and Accounting
- Fibre Channel Port Security and Fabric Binding

Describing Data Center Storage Infrastructure Maintenance and Operations*
- Time Synchronization
- Software Installation and Upgrade
- Storage Infrastructure Monitoring

Describing Cisco UCS Server Form Factors*
- Cisco UCS B-Series Blade Servers
- Cisco UCS C-Series Rack Servers

Implementing Cisco Unified Computing
- Implementing Cisco Unified Computing SAN Connectivity
- iSCSI Overview
- Fibre Channel Overview
- Implement FCoE

Implementing Unified Computing Security
- User Accounts and RBAC
- Options for Authentication
- Key Management

Introducing Cisco HyperFlex Systems*
- Hyperconverged and Integrated Systems Overview
- Cisco HyperFlex Solution
- Cisco HyperFlex Scalability and Robustness

Describing Data Center Unified Computing Management, Maintenance, and Operations*
- Compute Configuration Management
- Software Updates
- Infrastructure Monitoring
- Cisco Intersight™

Implementing Cisco Data Center Automation and Scripting Tools*
- Cisco NX-OS Programmability
- Scheduler Overview
- Cisco Embedded Event Manager Overview
- Bash Shell and Guest Shell for Cisco NX-OS
- Cisco Nexus API

Describing Cisco Integration with Automation and Orchestration Software Platforms
- Cisco and Ansible Integration Overview
- Cisco and Puppet Integration Overview
- Python in Cisco NX-OS and Cisco UCS

Describing Cisco Data Center Automation and Orchestration Technologies*
- Power On Auto Provisioning
- Cisco Data Center Network Manager Overview
- Cisco UCS Director Fundamentals
- Cisco UCS PowerTool

* This section is self-study material that can be done at your own pace after the instructor-led portion of the course.

Labs
- Configure Overlay Transport Visualization
### Domains
- VMM Domain EPG Association
- Cisco ACI Integration with Hypervisor
- Solutions

### Describing Packet Flow in Data Center Network
- Network Connectivity
  - Cisco UCS Fabric Interconnect
  - Cisco UCS B-Series Connectivity
  - Cisco UCS C-Series Integration
- Implementing Cisco Unified Computing
- Server Abstraction
- Identity Abstraction
- Service Profile Templates

### Data Center Traffic Flows
- Packet Flow in Cisco Nexus Switches
- Packet Flow in Cisco ACI Fabric

### Describing Cisco Cloud Service and Deployment Models
- Cisco UCS B-Series Connectivity
- Implement Cisco ACI Access Policies and
- Cisco UCS C-Series Integration
- Out-of-Band Management
- Implement Cisco ACI Tenant Policies
- Integrate Cisco ACI with VMware
- Cisco ACI Fabric Integration with Hypervisor
- Cisco UCS Fabric Interconnect
- Explore the Cisco ACI Fabric
- Implement Cisco ACI Access Policies and
- Out-of-Band Management
- Implement Cisco ACI Tenant Policies
- Integrate Cisco ACI with VMware
- Cisco ACI Fabric Integration with Hypervisor
- Cisco UCS Fabric Interconnect
- Explore the Cisco ACI Fabric
- Implement Cisco ACI Access Policies and
- Out-of-Band Management
- Implement Cisco ACI Tenant Policies
- Integrate Cisco ACI with VMware

### Cloud Architectures
- Implement Cisco ACI Access Policies and
- Out-of-Band Management
- Implement Cisco ACI Tenant Policies
- Integrate Cisco ACI with VMware

### Cloud Deployment Models
- Describing Packet Flow in Data Center Network
- Packet Flow in Cisco Nexus Switches
- Packet Flow in Cisco ACI Fabric
