
Risk Management

Duration: 3 Days Course Code: GK2811

Overview:

Why be reactive, when you can be proactive? If you are tired of having to pull your team off critical path activities to deal with the crisis of the day, effective risk management is the solution. Risk management, as an integrated component of successful project management, allows you to understand the uncertainty that is part of all project work and plan how to effectively manage that uncertainty. Go from leading your team through crisis after crisis, to effectively planning so you and your team can easily handle any surprise that might arise. Without risk management, projects are subject to surprising, sometimes devastating, events.

This course focuses on the concepts and building blocks of creating successful risk management within a project. Project managers must be aware of common risk traps and know how to identify, assess, and manage risks without jeopardizing the project success. Students pursuing a university-recognized and/or accredited certificate in Canada or continuing education units in the US must attend at least 90% of class time, participate in class exercises and section-knowledge checks, and score at least 70% on an end-of-class, multiple-choice assessment.

Target Audience:

Associate project managers, project managers, IT project managers, project coordinators, project analysts, project leaders, senior project managers, team leaders, product managers, and program managers

Objectives:

- | | |
|---|--|
| ■ Understand what qualifies as a risk | ■ Understand the most common risk sources |
