
Junos Multicast Routing

Duration: 2 Days Course Code: JMR Version: 16.a

Overview:

This two-day course is designed to provide students with detailed coverage of multicast protocols including Internet Group Management Protocol (IGMP), Protocol Independent Multicast–Dense Mode (PIM-DM), Protocol Independent Multicast–Sparse Mode (PIM-SM), and Multicast Source Discovery Protocol (MSDP). Through demonstrations and hands-on labs, students will gain experience in configuring and monitoring the Junos operating system and monitoring device and protocol operations. This course uses Juniper Networks MX Series 3D Universal Edge Routers for the hands-on component, but the lab environment does not preclude the course from being applicable to other Juniper hardware platforms running the Junos OS.

The Juniper Networks vMX Series devices run Junos OS Release 16.2R1.6.

Target Audience:

This course benefits individuals responsible for implementing, monitoring, and troubleshooting multicast components in a service provider's network.

Objectives:

After successfully completing this course, you should be able to:

- | | |
|--|--|
| ■ Describe IP multicast traffic flow . | ■ Configure and monitor MSDP. |
| ■ Identify the components of IP multicast. | ■ Compare the any-source multicast (ASM) and source-specific multicast (SSM) service models. |
| ■ Explain how IP multicast addressing works. | ■ Describe the basic requirements, benefits, and caveats of SSM. |
| ■ Describe the need for reverse path forwarding (RPF) in multicast. | ■ List the address ranges used for SSM. |
| ■ Explain the role of IGMP and describe the available IGMP versions. | ■ Illustrate the role of IGMPv3 and PIM-SM in an SSM implementation. |
| ■ Configure and monitor IGMP. | ■ Configure and monitor SSM. |
| ■ Identify common multicast routing protocols. | ■ Describe the default PIM sparse mode information distribution. |
| ■ Explain the differences between dense-mode and sparse-mode protocols. | ■ Explain how routing policies control IGMP joins. |
| ■ Describe rendezvous point (RP) discovery options. | ■ Explain how routing policies alter PIM protocol message flow. |
| ■ Configure and monitor PIM dense mode and PIM sparse mode. | ■ Identify the role of a policy in controlling MSDP message advertisement. |
| ■ Configure and monitor rendezvous point discovery mechanisms. | ■ Explain how you can use a policy to scope multicast groups. |
| ■ Explain the purpose and operation of MSDP. | ■ Describe IPv6 multicast addresses. |
| ■ Describe the usage of MSDP within a single PIM domain with anycast-RP. | ■ Describe IPv6 multicast scoping. |
| ■ Describe the usage of MSDP across multiple PIM domains. | ■ Compare IPv6 Multicast Listener Discovery (MLD) versions with IPv4's IGMP protocol versions. |
| | ■ Describe IPv6 SSM. |
-

Prerequisites:

Students should have basic networking knowledge and an understanding of the Open Systems Interconnection (OSI) model and the TCP/IP protocol suite. Students should also have working knowledge of security policies.

Students should also attend the Introduction to the Junos Operating System (IJOS), Junos Routing Essentials (JRE), and Junos Intermediate Routing (JIR) courses prior to attending this class.

Content:

Chapter 1: Course Introduction

Chapter 2: Introduction to Multicast

- Overview of Multicast
- Multicast Addresses
- Reverse Path Forwarding
- Internet Group Management Protocol
- Lab: Implementing a Baseline Network

Chapter 3: Multicast Routing Protocols

- Overview of Multicast Routing Protocols
- PIM Message Types

Chapter 4: PIM Sparse Mode

- PIM Sparse Mode Operation
- Bidirectional PIM Operation
- Configuring Sparse Mode
- Configuring Bidirectional PIM
- Monitoring Sparse Mode
- Lab: PIM Sparse Mode and RP Discovery

Chapter 5: MSDP

- MSDP
- Anycast-RP
- Lab: Implementing MSDP and Anycast-RP

Chapter 6: Source-Specific Multicast

- Overview of SSM Operation
- SSM Addresses
- IGMPv3 and SSM
- PIM-SM and SSM
- SSM Case Study
- Lab: Source-Specific Multicast

Chapter 7: Multicast and Policy

- Multicast and Policy Overview
- Controlling PIM Join and Register Messages
- Controlling BSR Messages
- Controlling MSDP SA Messages
- Implementing Multicast Scoping
- Lab: Multicast and Policy

Appendix A: PIM Dense Mode

- Monitoring Sparse Mode
- Configuring Dense Mode
- Monitoring Dense Mode
- Lab: PIM Dense Mode (Optional)

Appendix B: IPv6 Multicast

- IPv6 Multicast Addresses
- IPv6 MLD
- IPv6 ASM Options
- IPv6 SSM Addresses
