

Junos MPLS and VPNs

Duration: 5 Days Course Code: JMV

Overview:

The Junos MPLS and VPNs (JMV) course is designed to provide students with MPLS-based virtual private network (VPN) knowledge and configuration examples. The course includes an overview of MPLS concepts such as control and forwarding plane, RSVP Traffic Engineering, LDP, Layer 3 VPNs, next-generation multicast virtual private networks (MVPNs), BGP Layer 2 VPNs, LDP Layer 2 Circuits, and virtual private LAN service (VPLS). This course also covers Junos operating system-specific implementations of Layer 2 control instances and active interface for VPLS.

Target Audience:

This course is designed for:Individuals responsible for configuring and monitoring devices running the Junos OS

Objectives:

- Upon completing this course, the learner will be able to meet these overall objectives:
- Explain common terms relating to MPLS.
- Explain routers and the way they forward MPLS packets.
- Explain packet flow and handling through a label-switched path (LSP).
- Describe the configuration and verification of MPLS forwarding.
- Understand the information in the Label Information Base.
- Explain the two label distribution protocols used by the Junos OS.
- Configure and troubleshoot RSVP-signaled and LDP-signaled LSPs.
- Explain the constraints of both RSVP and LDP.
- Explain the path selection process of RSVP without the use of the Constrained Shortest Path First (CSPF) algorithm.
- Explain the Interior Gateway Protocol (IGP) extensions used to build the Traffic Engineering Database (TED).
- Describe the CSPF algorithm and its path selection process.
- Describe administrative groups and how they can be used to influence path selection.
- Describe the default traffic protection behavior of RSVP-Signaled LSPs.
- Explain the use of primary and secondary LSPs.
- Explain LSP priority and preemption.
- Describe the operation and configuration of fast reroute.
- Describe the operation and configuration of link and node

- Use operational commands to view Layer 3 VPN control exchanges.
- Use operational commands to display Layer 3 VPN VRF tables.
- Monitor and troubleshoot PE-CE routing protocols.
- Describe the four ways to improve Layer 3 VPN scaling.
- Describe the three methods for providing Layer 3 VPN customers with Internet access.
- Describe how the auto-export command and routing table groups can be used to support communications between sites attached to a common PE router.
- Describe the flow of control and data traffic in a hub-and-spoke topology.
- Describe the various Layer 3 VPN class-of-service (CoS) mechanisms supported by the Junos OS.
- Explain the Junos OS support for generic routing encapsulation (GRE) and IP Security (IPsec) tunnels in Layer 3 VPNs.
- Describe the flow of control traffic and data traffic in a next-generation MVPN.
- Describe the configuration steps for establishing a next-generation MVPN.
- Monitor and verify the operation of next-generation MVPNs.
- Describe the purpose and features of a BGP Layer 2 VPN.
- Describe the roles of a CE device, PE router, and P router in a BGP Layer 2 VPN.
- Explain the flow of control traffic and data traffic for a BGP Layer 2 VPN.
- Configure a BGP Layer 2 VPN and describe the benefits and requirements of over-provisioning.

protection.

- Describe the LSP optimization options.
- Explain the purpose of several miscellaneous MPLS features.
- Explain the definition of the term "Virtual Private Network".
- Describe the differences between provider-provisioned and customer-provisioned VPNs.
- Describe the differences between Layer 2 VPNs and Layer 3 VPNs.
- Explain the features of provider-provisioned VPNs supported by the Junos OS.
- Explain the roles of Provider (P) routers, Provider Edge (PE) routers, and Customer Edge (CE) routers.
- Describe the VPN-IPv4 address formats.
- Describe the route distinguisher use and formats.
- Explain the RFC 4364 control flow.
- Create a routing instance, assign interfaces, create routes, and import and export routes within the routing instance using route distinguishers and route targets.
- Explain the purpose of BGP extended communities and how to configure and use these communities.
- Describe the steps necessary for proper operation of a PE to CE dynamic routing protocol.
- Configure a simple Layer 3 VPN using a dynamic CE-PE routing protocol.
- Describe the routing-instance switch.
- Explain the issues with the support of traffic originating on multiaccess VPN routing and forwarding table (VRF table) interfaces.

- Monitor and troubleshoot a BGP Layer 2 VPN.
- Explain the BGP Layer 2 VPN scaling mechanisms and route reflection.
- Describe the Junos OS BGP Layer 2 VPN CoS support.
- Describe the flow of control and data traffic for an LDP Layer 2 circuit.
- Configure an LDP Layer 2 circuit.
- Monitor and troubleshoot an LDP Layer 2 circuit.
- Describe and configure circuit cross-connect (CCC) MPLS interface tunneling.
- Describe the difference between Layer 2 MPLS VPNs and VPLS.
- Explain the purpose of the PE device, the CE device, and the P device.
- Explain the provisioning of CE and PE routers.
- Describe the signaling process of VPLS.
- Describe the learning and forwarding process of VPLS.
- Describe the potential loops in a VPLS environment.
- Configure BGP and LDP VPLS.
- Troubleshoot VPLS.
- Describe the Junos OS support for carrier of carriers.
- Describe the Junos OS support for interprovider VPNs.

Prerequisites:

The knowledge and skills that a learner must have before attending this course are as follows:

- Intermediate-level networking knowledge
- An understanding of the Open Systems Interconnection (OSI) model and the TCP/IP protocol suite
- Familiarity with the Protocol Independent Multicast-Sparse Mode (PIM-SM) protocol

To gain the prerequisite skills and knowledge, Juniper strongly recommends the knowledge of the following courses:

- Introduction to the Junos Operating System (IJOS)
- Junos Routing Essentials (JRE)
- Junos Service Provider Switching (JSPX)
- Junos Intermediate Routing (JIR)

Testing and Certification

Recommended as preparation for:

 JN0-360 - Juniper Networks Certified Internet Specialist - Service Provider (JNCIS-SP)

JMV is one of the courses required for the Juniper Networks Certified Internet Specialist - Service Provider (JNCIS-SP) Certification

Content:

MPLS Fundamentals

- MPLS Foundation
- Terminology
- MPLS Configuration
- MPLS Packet Forwarding

Label Distribution Protocols

- Label Distribution Protocols
- RSVP
- LDP

Constrained Shortest Path First

- RSVP Behavior Without CSPF
- CSPF Algorithm
- CSPF Tie Breaking
- Administrative Groups

Traffic Protection and Optimization

- Default Traffic Protection Behavior
- Primary and Secondary LSPs
- Fast Reroute
- Bypass LSPs
- LSP Optimization

Miscellaneous MPLS Features

- Routing Table Integration
- Forwarding Adjacencies
- Policy Control over LSP Selection
- LSP Metrics
- Automatic Bandwidth
- TTL Handling
- Explicit Null Configuration
- MPLS Pings

VPN Review

- Overview of VPNs
- CPE-Based VPNs
- Provider-Provisioned

Layer 3 VPNs

- Layer 3 VPN Terminology
- VPN-IPv4 Address Structure
- Operational Characteristics

Basic Layer 3VPN Configuration

- Preliminary Steps
- PE Router Configuration

Troubleshooting Layer 3 VPNs

- A Layered Approach
- The routing-instance Switch
- PE-Based and CE-Based Traceroutes
- Viewing VRF Tables and PE-PE Signaling Flow
- Monitoring PE-CE Routing Protocols

Layer 3 VPN Scaling and Internet Access

- Scaling Layer 3 VPNs
- Public Internet Access Options

Layer 3 VPNs—Advanced Topics

- Exchanging Routes Between VRF Tables
- Hub-and-Spoke Topologies
- Layer 3 VPN CoS Options
- Layer 3 VPN and GRE Tunneling Integration
- Layer 3 VPN and IPsec Integration

Multicast VPNs

- Multicast VPN Overview
- Next-Generation MVPN Operation
- Configuration
- Monitoring

BGP Layer 2 VPNs

- Overview of Layer 2 Provider-Provisioned VPNs
- BGP Layer 2 VPN Operational Model: Control Plane
- BGP Layer 2 VPN Operational Model: Data Plane
- Preliminary BGP Layer 2 VPN Configuration
- BGP Layer 2 Configuration
- Monitoring and Troubleshooting BGP Layer 2 VPNs

Layer 2 VPN Scaling and CoS

- Review of VPN Scaling Mechanisms
- Layer 2 VPNs and CoS

LDP Layer 2 Circuits

- LDP Layer 2 Circuit Operation
- LDP Layer 2 Circuit Configuration
- LDP Layer 2 Circuit Monitoring and Troubleshooting
- Circuit Cross-Connect

Virtual Private LAN Services

- Layer 2 MPLS VPNs Versus VPLS
- BGP VPLS Control Plane
- BGP VPLS Data Plane
- Learning and Forwarding Process
- Loops

VPLS Configuration

- VPLS Configuration
- VPLS Troubleshooting

Interprovider VPNs

- Hierarchical VPN Models
- Junos Support of Carrier-of-Carriers Model
- Junos Support of Carrier-of-Carrier VPN Applications
