

## Red Hat Certified System Administrator (RHCSA) Rapid Track course (RH199)

**Duration: 5 Days**    **Course Code: RH199**    **Delivery Method: Virtual Learning**

### Overview:

**Learn essential Red Hat Enterprise Linux configuration, administration, and maintenance in a condensed format designed for experienced Linux system administrators.**

The RHCSA Rapid Track course (RH199) features Red Hat® Enterprise Linux® 10 and is designed for those who already have significant experience with Linux administration.

This course will lay the foundation for Linux system administrators to efficiently and securely resolve configuration issues, integrate Red Hat Enterprise Linux with other existing systems, manage user and group administration, and use available storage solutions. The rapid pace can quickly turn a computer professional with basic knowledge of Linux into a fully capable Linux administrator.

This accelerated course combines essential content from Red Hat System Administration I (RH124) and Red Hat System Administration II (RH134) to help students operate, manage, and maintain a Red Hat Enterprise Linux system.

This course is based on Red Hat Enterprise Linux 10.

**Note:** Starting January 1, 2026, Red Hat introduces RHLS-Course — a flexible subscription model now included with this catalog offering. This replaces the previous direct virtual class enrollment from Global Knowledge.

When you purchase this item, you'll receive an RHLS subscription at the course level, giving you the freedom to choose the schedule that works best and self-enroll in your selected class.

Your RHLS subscription includes:

- One live, instructor-led virtual session
- 12 months of self-paced learning access
- One certification exam with a free retake

Onsite Classroom-based sessions and closed course options remain unchanged.

Updated Jan2026

### Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

### Target Audience:

System administrators, platform engineers, developers, and other IT professionals who have a foundational understanding of the Linux command line, and are seeking to learn key tasks to administer a Red Hat Enterprise Linux system.

### Objectives:

- |   |   |
|---|---|
| ■ After this course participants should be able to:                     | ■ Configure network services and security   |
| ■ Manage users, groups, and authentication                              | ■ Create storage devices, volumes, and file systems, including Stratis storage management |
| ■ Manage packages with a new repository structure and AppStream modules | ■ Perform server management with the Cockpit web management utility                       |
| ■ Use and manage desktop software by using Flatpak                      | ■ Troubleshoot problems and obtain support  |
| ■ Manage processes, scheduling, and tuning                              |   |

### Prerequisites:

- Familiarity with fundamental Linux computing concepts, experience as a Linux user, and readiness to perform system administration tasks.
- Significant field experience working with Linux as a system administrator is recommended.

### Testing and Certification

- Red Hat Certified System Administrator (RHCSA) exam (EX200)

■ If you do not have experience with fundamental Linux computer concepts, Red Hat recommends that you start by taking the Red Hat System Administration I (RH124) course instead. Take Red Hat free assessment to gauge whether this offering is the best fit for your skills [Red Hat Skills Assessment](#)

---

#### Follow-on-Courses:

■ Red Hat Enterprise Linux Automation with Ansible (RH294 - AU294)

---

## Content:

Registering Systems for Red Hat Support	Accessing Removable Media	Managing Basic Storage
Register a system by using your Red Hat account to get support services and software that Red Hat provides.	Access file systems on removable media devices by mounting them on a directory in the file-system hierarchy.	Manage storage devices by creating partitions, file systems, and swap spaces from the command line.
Managing Files from the Command Line	Monitoring and Managing Linux Processes	Managing Storage with Logical Volume Manager
Copy, move, create, delete, and organize files from the command line.	Investigate, control, and terminate processes that run on a Red Hat Enterprise Linux System.	Use Logical Volume Manager (LVM) to manage logical volumes that can contain file systems and swap spaces.
Editing Text Files	Controlling Services and Daemons	Controlling and Troubleshooting the Boot Process
Create, view, and edit text files from the command line.	Control and monitor the system services and daemons that systemd starts.	Manage how the system boots to control which services start and to troubleshoot and repair boot-time problems.
Managing Local Users and Groups	Managing Network Configuration	Recovering Superuser Access
Obtain superuser access to a system; create, manage, and delete local users and groups; and administer local password policies.	Configure network interfaces and settings on Red Hat Enterprise Linux servers.	Gain administrative access to a system when the superuser password is unknown or is locked.
Controlling Access to Files	Scheduling System Tasks	Managing Network Security
Set standard permissions on files and interpret the security effects of different permission settings.	Schedule system programs that must run on a recurring basis to support daemons or operating system functions.	Control network connections to services by using the system firewall, and network services that can bind to particular ports by using SELinux.
Installing and Updating Software with RPM	Analyzing and Storing Logs	Accessing Network-attached Storage
Download, install, update, and manage software packages from Red Hat and DNF package repositories.	Locate and interpret system logs for troubleshooting purposes, and ensure accurate timestamps for log events.	Access network-attached storage that is provided by using the Network File System (NFS) protocol, either manually or by using the automounter.
Installing and Updating Applications by using Flatpak	Managing Security with SELinux	Comprehensive Review
Install, upgrade, and use desktop software from the Red Hat Ecosystem Catalog by using Flatpak.	Protect systems and manage security by using SELinux.	Practice skills learned in <i>RHCSA Repaid Track Course</i> .
