

## Red Hat Enterprise Linux Automation with Ansible and exam

Duration: 5 Days Course Code: RH295

### Overview:

Learn how to automate Linux system administration tasks with Red Hat Ansible Automation Platform

Red Hat Enterprise Linux Automation with Ansible and exam (RH295) is designed for Linux system administrators and developers who need to automate provisioning, configuration, application deployment, and orchestration.

The Red Hat Certified Engineer (RHCE) exam (EX294) is included in this offering. This offering is based on Red Hat® Enterprise Linux 9 and Red Hat Ansible Automation Platform 2.2.

Course content summary

- Install Red Hat Ansible Automation Platform on control nodes.
- Create and update inventories of managed hosts and manage connections to them.
- Automate administration tasks with Ansible Playbooks and ad hoc commands.
- Write effective playbooks at scale.
- Protect sensitive data used by Ansible Automation Platform with Ansible Vault.
- Reuse code and simplifying playbook development with Ansible Roles and Ansible Content Collections.

### Target Audience:

This course is geared toward Linux system administrators, DevOps engineers, infrastructure automation engineers, and systems design engineers who are responsible for these tasks:

- Automate configuration management
- Ensure consistent and repeatable application deployment
- Provision and deployment of development, testing, and production servers
- Integrate with DevOps continuous integration/continuous delivery workflows

### Objectives:

#### Impact on the organization

- Bring operational efficiency by removing manual processes through automation.
- Easily scale the organization's dynamic IT infrastructure.
- Accelerate application time to value.

- Rapidly adapt and implement needed innovation through DevOps practices.

- Red Hat has created this course in a way intended to benefit our customers, but each company and infrastructure is unique, and actual results or benefits may vary.

#### Impact on the individual

- You will be able to apply automation first principles to solve real-world Linux system and services problems through the effective creation of Ansible playbooks and application of Red Hat Ansible Automation Platform. You will gain the skills to automate your workflows, build the foundation for DevOps practices, and learn how to leverage Ansible Automation Platform for developmental efficiencies.

### Prerequisites:

Pass the Red Hat Certified System Administrator (RHCSA) exam (EX200), or demonstrate equivalent Red Hat Enterprise Linux knowledge and experience.

## Content:

Introduce Ansible	Implement task control	Simplify playbooks with roles
Describe the fundamental concepts of Red Hat Ansible Automation Platform and how it is used, and install Red Hat Ansible Automation Platform	Manage task control, handlers, and task errors in Ansible Playbooks.	Use Ansible roles to develop playbooks more quickly and to reuse Ansible code.
Implement an Ansible playbook	Deploy files to managed hosts	Troubleshoot Ansible
Create an inventory of managed hosts, write a simple Ansible playbook, and run the playbook to automate tasks on those hosts.	Manage task control, handlers, and task errors in Ansible playbooks.	Troubleshoot playbooks and managed hosts.
Manage variables and facts	Managing complex plays and playbooks	Automate Linux administration tasks
Write playbooks that use variables to simplify management of the playbook and facts to reference information about managed hosts.	Write playbooks for larger, more complex plays and playbooks.	Automate common Linux system administration tasks with Ansible.

---
