Red Hat Security: Identity Management and Authentication with Exam (EX362)

Duration: 5 Days   Course Code: RH363   Delivery Method: Company Event

Overview:

Provide help to secure, centralized identity management services to coordinate user authentication and authorization with client systems, network services, and Windows domains.
Red Hat Security: Identity Management and Authentication (RH362) provides the skills to configure and manage Identity Management (IdM), the comprehensive identity management component bundled with Red Hat Enterprise Linux.
Businesses will be able to integrate and centralize lifecycle management and security policy implementation and enforcement, and extend that consolidated management to additional enterprise configuration management products from the Red Hat portfolio, including Red Hat Ansible Automation Platform and Red Hat Satellite Server.

Some topics covered in this course are: central management and provisioning of user accountsdesign and installation of IdM server topologiesoperation of the integrated DNS and TLS Certificate Authority services management of two-factor authentication, smart card authentication, and operation as a single-sign on providerintegration and management of two-way trusts with Active Directorytroubleshooting and disaster recovery planning. Registration of Linux clients to IdM and operation in enterprise environments that use both Linux and Microsoft Windows clients and servers is discussed.

This package (course + exam) helps students to gain the skills with this technology most requested by customers and includes an exam voucher.
Note: *Starting January 2026 this bundle (Course + Exam) only exists in CR (classroom) if scheduled or Closed course modalities.*
If you are targeting a virtual class, please consider RH362LS the new RHLS-course subscription which includes as well an exam voucher.
Updated Jan2026

Company Events

These events can be delivered exclusively for your company at our locations or yours, specifically for your delegates and your needs. The Company Events can be tailored or standard course deliveries.

Target Audience:

Red Hat Certified System Engineers (RHCE) who wish to learn how to provision and configure centralized identity management solutions for Linux clients and how to integrate them with other network services and identity management systems. Identity Management specialists or engineersAccess Management specialists or engineers

Objectives:

- After this course participants should be able to:

- Design an Identity Management topology for scale and resiliency.

- Describe key technologies used by IdM, including SSSD, PAM, Kerberos, and PKI.

- Install Identity Management (IdM) servers, replicas, and clients using Ansible Playbooks.

- Manage IdM services, including integrated DNS and CA.

- Configure and manage Kerberos authentication and secure services.

- Configure and manage TLS certificates.

- Create and manage a trust relationship with Microsoft Active Directory.

- Configure to help secure user authentication, including two-factor authentication and single sign-on.

- Configure and manage Sudo, HBAC, and RBAC policies.

- Manage secrets, vaults, certificates, and keys.

- Troubleshoot identity management.

- Integrate Satellite 6 and Red Hat Ansible Automation Platform with IdM.

- Configure IdM backup and recovery.

Prerequisites:

- An RHCE certification or equivalent skill is a prerequisite to this course.
Take Red Hat free assessment to gauge whether this offering is the best fit for your skills Red Hat Skills Assessment

Testing and Certification

- Red Hat Certified Specialist in Identity Management exam (EX362) - exam voucher included

Follow-on-Courses:

None

Content:

Identity Management in Red Hat Enterprise Linux

- Introduce Identity Management in Red Hat Enterprise Linux (IdM) and its high-level architecture.

Identity Management Core Technologies

- Review the core technologies of Identity Management (IdM) in Red Hat Enterprise Linux.

Installing Identity Management in Red Hat Enterprise Linux

- Install Identity Management servers, replicas, and clients on Red Hat Enterprise Linux 9.

Implementing an Identity Management Topology

- Implement continuous functionality and high availability of IdM services in single-site and geographically distributed topologies.

Managing the CA and DNS Integrated Services

- Manage the Certificate Authority (CA) and the Domain Name System (DNS) services that are integrated with Identity Management.

Managing Users and Controlling User Access

- Configure users for authorized access to services and resources.

Configuring Alternative Authentication Services

- Configure and manage smart card authentication, secrets, and two-factor authentication.

Integrating Identity Management with Active Directory

- Implement a cross-forest trust between Identity Management and Active Directory, and configure ID views to map POSIX attributes to Active Directory users.

Integrating Identity Management with Red Hat Utilities

- Integrate an Identity Management deployment with Red Hat Satellite and Red Hat Ansible Automation Platform.

Troubleshooting and Disaster Recovery Planning for IdM

- Troubleshooting and preparing for disaster recovery with Identity Management.

Comprehensive Review

- Build a small, resilient Identity Management topology to include multiple replicas and clients, populated with multiple users, credentials, policies, and access rights.
