

Red Hat Performance Tuning: Linux in Physical, Virtual, and Cloud

Duration: 4 Days **Course Code:** RH442 **Delivery Method:** Company Event

Overview:

Performance tuning and capacity planning for Red Hat Enterprise Linux

Red Hat Performance Tuning: Linux in Physical, Virtual, and Cloud (RH442) teaches senior Linux® system administrators the methodology of performance tuning.

This course is intended to develop the skills needed to improve infrastructure performance, increase system utilization, reduce downtime, and improve responsiveness to system failures.

This course discusses system architecture with an emphasis on understanding its implications on system performance, performance adjustments, open source benchmarking utilities, networking performance, and tuning configurations for specific server use cases and workloads.

As a result of attending this course, you should be able to obtain, analyze, and interpret system performance metrics, then use these metrics to help increase cost effectiveness, maximize application performance, and make better decisions about investment in hardware or cloud resources.

This course is based on Red Hat® Enterprise Linux 8.

Note: Starting January 1, 2026, Red Hat introduces RHLS-Course — a flexible subscription model now included with this catalog offering. This replaces the previous direct virtual class enrollment from Global Knowledge.

When you purchase this item, you'll receive an RHLS subscription at the course level, giving you the freedom to choose the schedule that works best and self-enroll in your selected class.

Your RHLS subscription includes:

- One live, instructor-led virtual session
- 12 months of self-paced learning access
- One certification exam with a free retake

Onsite Classroom-based sessions and closed course options remain unchanged.

Updated Jan2026

Company Events

These events can be delivered exclusively for your company at our locations or yours, specifically for your delegates and your needs. The Company Events can be tailored or standard course deliveries.

Target Audience:

Senior Linux system administrators responsible for maximizing resource utilization through performance tuning

Objectives:

- | | |
|---|---|
| ■ After this course participants should be able to: | ■ Trace and profile system events and activities |
| ■ Analyze and tune for resource-specific scenarios | ■ Tune resource limits and utilization using systemd-integrated cgroups |
| ■ Applying tuning profiles with the tuned tool | ■ Gather performance metrics and benchmarking data |
| ■ Tune in virtual environments (hosts and guests) | |

Prerequisites:

- RHCE certification or equivalent experience is expected
- Take Red Hat free assessment to gauge whether this offering is the best fit for your skills [Red Hat Skills Assessment](#)

Testing and Certification

- Red Hat Certified Specialist in Linux Performance Tuning exam (EX442)

Follow-on-Courses:

None

Content:

Introduce performance tuning <ul style="list-style-type: none">■ Describe performance tuning concepts and goals.	Analyze performance using system tracing tools <ul style="list-style-type: none">■ Diagnose system and application behaviors using a variety of resource-specific tracing tools.	Tune network utilization <ul style="list-style-type: none">■ Manage application efficiency for network utilization.
Select performance monitoring tools <ul style="list-style-type: none">■ Evaluate the large selection of performance monitoring tools that are included with Red Hat Enterprise Linux.	Tune CPU utilization <ul style="list-style-type: none">■ Manage CPU resource sharing and scheduling to control utilization.	Tune in virtualization environments <ul style="list-style-type: none">■ Distinguish the requirements for tuning in virtualized environments.
View hardware resources <ul style="list-style-type: none">■ View and interpret hardware resource listings.	Tune memory utilization <ul style="list-style-type: none">■ Manage settings for efficient memory utilization for different types of workloads.	Perform comprehensive review <ul style="list-style-type: none">■ Demonstrate skills learned in this course by observing system performance using the appropriate tools, evaluating system metrics, and configuring settings to improve performance.
Configure kernel tunables and tuned profiles <ul style="list-style-type: none">■ Configure the operating system to tune for different workload requirements.	Tune storage device I/O <ul style="list-style-type: none">■ Manage settings for efficient disk utilization in various use cases.	
Manage resource limits with control groups <ul style="list-style-type: none">■ Manage resource contention and set limits for resource use on services, applications, and users using cgroup configuration.	Tune file system utilization <ul style="list-style-type: none">■ Manage application efficiency for file system utilization.
