

VMware Cloud Foundation: Build, Manage, and Secure

Duration: 5 Days **Course Code: VMCFBMS** **Version: 9.0** **Delivery Method: Virtual Learning**

Overview:

This five-day course provides you with the knowledge, skills, and abilities to achieve competence in deploying, managing, operating and securing private cloud using VMware Cloud Foundation® (VCF). You will learn about the architecture of VCF, storage and network management, licensing, and certificates. In addition to workload domains, availability, and life cycle management, the course also covers upgrade scenarios.

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Target Audience:

System Administrators, Solution Engineers, Consultants, Architects, and Support Personnel

Objectives:

■ After completing this course you should be able to:

- | | |
|---|--|
| ■ Define VCF and its key features | ■ Import vCenter as a workload domain using VCF Operations |
| ■ Describe the use cases of VCF | ■ Describe the process for configuring Fibre Channel storage |
| ■ Explain the architecture of the VCF private cloud | ■ Identify the components of an iSCSI storage system |
| ■ Recognize the components of the VCF private cloud | ■ Outline the process of provisioning NFS storage to VMware® ESX hosts |
| ■ Outline the sequence for deploying the VCF private cloud | ■ Identify and use built-in tools to validate a successful VMware® vSAN deployment |
| ■ Describe the deployment configuration of VCF instance core components | ■ Compare the various tools used to monitor a vSAN cluster |
| ■ Explain the deployment configuration of VCF fleet management components | ■ Explain the types of vSAN reports available in VMware Cloud Foundation® Operations |
| ■ Deploy VMware Cloud Foundation® Operations for networks, VMware Cloud Foundation® Operations for logs, and VMware Cloud Foundation® Identity Broker | ■ Explain Virtual Private Cloud concepts and constructs |
| ■ Describe the VCF licensing model | ■ Differentiate between Centralized and Distributed Network Connectivity |
| ■ Describe the single sign-on architecture in VCF | ■ Identify the steps to configure virtual private cloud |
| ■ Identify the steps to configure single sign-on in VCF | ■ Manage certificates in VCF |
| ■ Manage users and user groups in VCF | ■ Explain the life cycle management of VCF components |
| ■ Outline the steps to manage passwords in VCF | ■ Identify the supported upgrade paths to VCF 9.0 |
| ■ Outline the steps to create a workload domain | ■ Define security, compliance and resilience in VCF |
| ■ Configure VMware® vCenter® linked groups | ■ Describe the integrated security features across all layers in VCF |
| | ■ Discuss and perform VCF upgrade paths |

Prerequisites:

Attendees should meet the following prerequisites:

- Implement Learning Path Stage-1 Training
- Working experience and knowledge of VMware vSphere®, VMware NSX®, and vSAN environments
- VMNSXICM - VMware NSX: Install, Configure, Manage
- VMVSANICM - VMware vSAN: Install, Configure, Manage
- VSICM - VMware vSphere: Install, Configure, Manage

Testing and Certification

Recommended as preparation for the following exams:

- **2V0-16.25** - VMware Certified Professional - VMware vSphere Foundation Administrator
- **2V0-17.25** - VMware Certified Professional - VMware Cloud Foundation Administrator

Follow-on-Courses:

-
- VMCFAO - VMware Cloud Foundation: Automate and Operate

Content:

1. Course Introduction

- Introduction and course logistics
- Course objectives

2. VCF Private Cloud: Overview and Architecture

- Define VCF and its key features
- Describe the use cases of VCF
- Explain the capabilities of VCF
- Describe the integrated security across all layers in VCF
- Explain the advanced services of VCF
- Explain the architecture of the VCF private cloud
- Recognize the components of the VCF private cloud
- Distinguish between VCF fleet-level components and VCF instance-level components
- Describe the various roles in VCF private cloud

3. VCF Private Cloud Deployment

- Identify the VCF fleet deployment considerations
- Describe the process for planning and preparing a VCF deployment
- Identify the information required for the Planning and Preparation Workbook
- Explain the high-level steps to deploy VCF private cloud
- Outline the sequence for deploying the VCF private cloud
- Describe the deployment configuration of VCF instance core components
- Explain the deployment configuration of VCF fleet management components
- Use the VCF Installer deployment wizard to deploy a new VCF fleet
- Use a deployment specification JSON file to deploy a new VCF fleet

4. VCF Post-deployment Tasks

- Navigate the VCF Operations user interface
- Navigate the VMware Cloud Foundation® Automation user interface
- Navigate the vSphere Client user interface
- Explain VCF Operations for networks, VCF Operations for logs, and VCF Identity Broker
- Deploy VCF Operations for networks, VCF Operations for logs, and VCF Identity Broker

5. VCF Fleet Management

- Describe the VCF licensing model
- Assign and manage VCF licenses
- Identify key log files to troubleshoot licensing issues
- Discuss single sign-on in VCF
- Describe the single sign-on architecture in VCF
- Discuss VCF Identity Broker in VCF
- Identify the steps to configure single sign-on in VCF
- List the supported directories and IDPs in VCF
- Configure SSO and enablement for all components in a VCF Instance
- Manage users and user groups in VCF
- Outline the steps to manage passwords

6. VCF Workload Domain

- Explain VCF domains
- Describe the management of the workload domains
- List design considerations for workload domains
- Describe design prerequisites for a workload domain
- Outline the steps to create a workload domain
- Describe vCenter Groups
- Configure vCenter linked groups
- Import vCenter as a workload domain using VCF Operations

7. VCF Networking

- Describe the role of VMware NSX in VCF
- Describe the default NSX objects that are created during the VCF deployment
- Discuss the Workload domain networking options
- Describe the networking constructs in NSX
- Explain Virtual Private Cloud concepts and constructs
- Differentiate between Centralized and Distributed Network Connectivity
- Configure Distributed Network Connectivity
