IAPP Certified Information Privacy Professional and Technologist prep course + Exam

Duration: 4 Days **Course Code: CIPPE-CIPT** **Delivery Method: Virtual Learning**

Overview:

Are you GDPR-ready?
The General Data Protection Regulation (GDPR) takes effect in 2018, are you ready for it? Among its mandates is the requirement to appoint a knowledgeable Data Protection Officer (DPO) tasked with monitoring compliance, managing internal data protection activities, training data processing staff, conducting internal audits and more. There's a lot to know, there's a lot at stake and there's a lot of opportunity for data protection professionals with the right training and education.
Achieving a CIPP/E and CIPT credential shows you have the comprehensive GDPR knowledge, perspective and understanding to ensure compliance and data protection success in Europe—and to take advantage of the career opportunity this sweeping legislation represents.
The CIPP/E part of this training encompasses pan-European and national data protection laws, key data protection terminology and practical concepts concerning the protection of personal data and trans-border data flows. The CIPT part of this training gives you knowledge how to build your organisation's data protection structures from the ground up. With regulators worldwide calling for tech professionals to factor data protection into their products and services, the job market for privacy-trained IT pros has never been stronger.
Whether you work in the public or private sector, data privacy skills are quickly becoming a must-have—and that's a great opportunity for you.
This four-day programme covering the principals of information privacy, principles of data protection in Europe and principles of privacy in technology includes:Official IAPP CIPP/E and CIPT Participant GuidesOfficial IAPP CIPP/E and CIPT Textbooks (via MyIAPP account under My Purchase then scroll down to My Ebooks)Official IAPP CIPP/E and CIPT Practice TestsIAPP CIPP/E and CIPT Certification Exam VouchersOne-Year IAPP Membership

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Target Audience:

- Data Protection Officers
- IT Managers and Administrators
- Records Managers
- System Developers
- IT Security specialist
- Anyone who builds and develops IT systems

Objectives:

- Define key concepts of European data protection.
- Describe EU data protection laws and regulatory bodies.
- Explain the application of the GDPR and other compliance obligations to European and international entities.
- Identify the risks to privacy that are inherent throughout the data life cycle and explain how software security helps to mitigate privacy threats. ?
- Outline how technical measures and privacy-enhancing technologies may be used to enhance privacy throughout all steps of the data life cycle.
- Explain the role of privacy engineering in an organization.
- Describe the process and methodology of the privacy-by-design model.
- Examine the unique challenges that come from online privacy issues.

Prerequisites:

While there are no prerequisites, However, participants are recommended to have:

- Familiarity with legal or regulatory environments related to privacy
- A basic understanding of IT, cybersecurity, or software development concepts
- Familiarity with data protection and privacy principles

Testing and Certification

Certified Information Privacy Professional – Europe (CIPP/E):

Achieving a CIPP/E credential shows you have the comprehensive GDPR knowledge, perspective and understanding to ensure compliance and data protection success in Europe—and to take advantage of the career opportunity this sweeping legislation represents.

Certified Information Privacy Technologist (CIPT):

Achieving the CIPT credential shows you've got the knowledge to build your organisation's data protection structures from the ground up. With regulators worldwide calling for tech professionals to factor data protection into their products and services, the job market for privacy-trained IT pros has never been stronger.

Content:

Days 1 ; 2

Module 1: Data Protection Laws

Introduces key European data protection laws and regulatory bodies, describing the evolution toward a harmonized legislative framework.

Module 2: Personal Data

Defines and differentiates between types of data as defined by the EU General Data Protection Regulation, including personal, anonymous, pseudonymous and special categories.

Module 3: Controllers and Processors

Describes the roles and relationships of controllers and processors as defined by the GDPR.

Module 4: Processing Personal Data

Defines data processing and GDPR-processing principles, explains the application of the GDPR, and outlines the legal grounds for processing personal data.

Module 5: Data Subject Rights

Describes data subject rights, applications of rights, and controller and processor obligations as set out in the GDPR.

Module 6: Information Provision Obligations

Explains controller obligations for providing information about data-processing activities to data subjects and supervisory authorities as set out in the GDPR.

Module 7: International Data Transfers

Outlines options and obligations under the GDPR for transferring data outside the European Economic Area, including adequacy decisions and appropriate safeguards and derogations.

Module 8: Compliance Considerations

Discusses the applications of European data protection laws, legal bases and compliance requirements for processing personal data in practice, including employers processing employee data, surveillance, direct marketing, and internet technology and communications.

Module 9: Security of Processing

Discusses considerations and duties of controllers and processors for ensuring personal data security and GDPR specifications for providing notification of data breaches.

Module 10: Accountability

Investigates accountability requirements, including data protection management systems, data protection impact assessments, data protection policies and the role of the data protection officer.

Module 11: Supervision and Enforcement

Describes the role, powers and procedures of supervisory authorities; composition and tasks of the European Data Protection Board; role of the European Data Protection Supervisor; and remedies, liabilities and penalties for noncompliance outlined in the GDPR.

Days 3 ; 4

Module 1: Foundational Principles of Privacy in Technology

Summarizes the foundational elements for embedding privacy in technology through privacy by design and value-sensitive design.

Module 2: Role of the Technology Professional in Privacy

Reviews the fundamentals of privacy as they relate to the privacy technologist. Describes the privacy technologist's role in ensuring compliance with privacy requirements and meeting stakeholder privacy expectations. Explores the relationship between privacy and security.

Module 3: Privacy Threats and Violations

Identifies inherent risks throughout the data life cycle stages and explores how software security helps mitigate privacy threats. Examines the impacts that behavioral advertising, cyberbullying and social engineering have on privacy within the technological environment.

Module 4: Technical Measures and Privacy-Enhancing Technologies

Outlines the strategies and techniques for enhancing privacy throughout the data life cycle, including identity and access management; authentication, encryption and aggregation; and personal information collection and use.

Module 5: Privacy-by-Design Methodology

Illustrates the process and methodology of the PbD model. Explores practices to ensure ongoing vigilance when implementing PbD.

Module 6: Privacy Engineering

Explores the role of privacy engineering within an organization, including the objectives of privacy engineering, privacy-design patterns and software-privacy risks.

Module 7: Technology Challenges for Privacy

Examines the unique challenges that come from online privacy issues, including automated decision-making, tracking and surveillance technologies, anthropomorphism, ubiquitous computing and mobile social computing.

Reviews the data life cycle and common privacy risk models and frameworks.
