

Red Hat OpenStack Administration II: Day 2 Operations for Cloud Operators

Duration: 5 Days Course Code: CL210 Delivery Method: Company Event

Overview:

Build advanced skills for performing Red Hat OpenStack Platform day 2 operations and management of hybrid cloud infrastructure
Red Hat OpenStack Administration II: Day 2 Operations for Cloud Operators (CL210) is designed for cloud operators, service administrators, and automation engineers who operate and manage a full-featured hybrid and private cloud-computing environment using Red Hat OpenStack Platform. You will learn how to manage, monitor, troubleshoot, and scale a Red Hat OpenStack Platform infrastructure. This course focuses on using the OpenStack Client command-line user interface to configure metrics, policies, and architecture in order to support enterprise cloud applications and daily operations.

This course is based on Red Hat OpenStack version 16.1 and Red Hat Enterprise Linux version 8.2

Following course completion, you will receive a 45-day extended access to hands-on labs for any course that includes a virtual environment.

Note: This course is offered as a five day virtual class or self-paced. Durations may vary based on the delivery. For full course details, scheduling, and pricing, select your location then “get started” on the right hand menu.

Company Events

These events can be delivered exclusively for your company at our locations or yours, specifically for your delegates and your needs. The Company Events can be tailored or standard course deliveries.

Target Audience:

- Cloud operators responsible for managing daily operations and automation.
- Infrastructure architects interested in or responsible for maintaining a large-scale private or hybrid cloud.

Objectives:

- Managing overcloud service containerization technology.
- Providing metrics for performance tuning and governance.
- Monitoring and troubleshooting Open Virtual Networking (OVN) network flow.
- Configuring Identity service using an external Red Hat IdM store.
- Managing the core control plane, including Pacemaker.
- Customizing images, with techniques for multiple use cases.
- Managing block and object storage back-ends.
- Managing compute nodes, including tuning and hyperconverged.
- Troubleshooting Red Hat OpenStack Platform.

Prerequisites:

- Be a Red Hat Certified Engineer (RHCE), Red Hat Certified Specialist in Ansible Automation, or demonstrate equivalent experience.
- For candidates that have not earned an RHCE or equivalent, confirmation of the correct skill-set knowledge can be obtained by [taking our free assessment](#) to gauge whether this offering is the best fit for your skills.
- CL110 - Red Hat OpenStack Administration I: Core Operations for Domain Operators

Follow-on-Courses:

- CL260 - Red Hat Ceph Storage for OpenStack
- EX210 - Red Hat Certified System Administrator in Red Hat OpenStack exam

Content:

| | | |
|--|--|--|
| Navigate the Red Hat OpenStack Platform architecture | Manage application deployment resources | Monitor Red Hat OpenStack Platform operations |
| Describe the undercloud and overcloud architecture and service components. | Create and manage the common, shared deployment resources including custom images, flavors, and metadata services. | Describe the monitoring framework and architecture to gather, store, and use operational metrics. |
| Operate the control plane | Manage storage | Automate cloud applications |
| Describe and manage the critical core services of the Red Hat OpenStack Platform control plane. | Describe and manage storage architecture and components, with an emphasis on Red Hat Ceph Storage back ends. | Implement and deploy complex and scalable applications using automation technologies. |
| Manage infrastructure security | Manage networking | Troubleshoot operations |
| Protect the Red Hat OpenStack Platform infrastructure by securing service component files and endpoints. | Create, manage, and troubleshoot data center and virtual network infrastructure. | Describe and practice the tools and methods for diagnosing and troubleshooting issues encountered during deployment and management operations. |
| Manage user security | Manage compute node operations | Comprehensive review |
| Configure secure user privileges using domain-based identity management, scoped roles, and project organization. | Describe the architecture and management processes for normal and hyperconverged compute nodes. Perform common operational tasks for compute nodes to support workload uptime and scaling. | Review tasks from Red Hat OpenStack Platform Administration II: Day 2 Operations for Cloud Operators. |

Additional Information:

Technology considerations

- There are no current special requirements or technical considerations.
- No BYOD support.
- No Internet access required.
