

## Workshop: Useful Hacking Techniques for Administrators

**Duration: 5 Days    Course Code: HTA**

---

### Overview:

You will enjoy it! The training teaches infrastructure security concepts, including the techniques how to attack and how to respond with an appropriate countermeasure implementation. Everyone has heard about hackers. It is commonly known that their jobs differ from system administrator jobs. However, things they do in their darkened rooms are definitely interesting and worth knowing. Many of the techniques they use are very useful in everyday administration tasks. A Hackers' knowledge is considered to be valuable, both by system creators and common users. Administrators do not have to be taught how to be a hacker; it is often enough to show them one simple, but very interesting tool or technique, to change the point of view on their own IT environment. Topics covered in this seminar help you to feel for the hacker's role and evaluate your network from their point of view. Seminar is based on Windows 7 and Windows 8, Windows Server 2008 R2 and Windows Server 2012.

---

### Target Audience:

Network administrators, infrastructure architects, security professionals, systems engineers, network administrators, IT professionals, security consultants and other people responsible for implementing network and perimeter security.
