

SAP Data Modelling in ABAP Dictionary and ABAP Core Data Services

Duration: 4 Days Course Code: S4D430 Delivery Method: Virtual Learning

Overview:

This course extends the skills that you acquired in the Basic and Intermediate ABAP programming courses with the ability to analyze and define data models. You will define database tables in the ABAP dictionary, and views in ABAP core data services (CDS). You will model relations, add SQL logic, and enrich your views with metadata. In the end, you will protect your data against unauthorized read access and learn how to extend foreign data models. The course is held on SAP BTP, ABAP environment. However, the content is equally suitable for SAP S/4HANA Cloud, ABAP Environment and SAP S/4HANA 2020 or later.

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Target Audience:

Developer/Development Consultant

Objectives:

- This course will prepare you to:
 - Define view entities in ABAP core data services
- Define database tables in the ABAP dictionary

Prerequisites:

- S4D400 - Basic ABAP Programming
- S4D401 - Intermediate ABAP Programming
- BC400 - ABAP Workbench Foundations

Content:

- Data modeling in ABAP
- Creating database tables
- Defining global types
- Defining CDS views
- Defining relationships and associations between objects
- Using code pushdown in CDS views
- Defining meta objects for ABAP dictionary objects and CDS views

Additional Information:

Official course book provided to participants
Course based on software release:
SAP BTP, ABAP Environment equally suitable for
SAP S/4HANA Cloud, ABAP Environment
SAP S/4HANA 2020 or later
