

Implementing Cisco Service Provider Advanced Routing Solutions

Duration: 5 Days **Course Code: SPRI** **Version: 1.1** **Delivery Method: Virtual Learning**

Overview:

The Implementing Cisco Service Provider Advanced Routing Solutions (SPRI) course expands a student's knowledge and skills in service provider core networking. You will cover the theories and practical knowledge of advanced routing technologies including routing protocols, policy language, Multiprotocol Label Switching (MPLS), and segment routing.

This course is worth 40 Continuing Education (CE) Credits.

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Target Audience:

Engineers who maintain and operate advanced Service Provider core networks.

Objectives:

- **After completing this course you should be able to:**
- Implement advanced features of multiarea Open Shortest Path First (OSPFv2) running in Service Provider networks
- Implement advanced features of multilevel Intermediate System to Intermediate System (ISIS) running in Service Provider networks
- Describe the main characteristics of routing protocols that are used in service provider environments
- Configure route redistribution
- Configure Border Gateway Protocol (BGP) in order to successfully connect the Service Provider network to the customer or upstream Service Provider
- Configure BGP scalability in Service Provider networks
- Implement BGP security options
- Implement advanced features in order to improve convergence in BGP networks
- Troubleshoot OSPF, ISIS, and BGP
- Implement and verify MPLS
- Implement and troubleshoot MPLS Traffic engineering
- Implement and verify segment routing technology within an interior gateway protocol
- Describe how traffic engineering is used in segment routing networks
- Implement IPv6 tunneling mechanisms
- Describe and compare core multicast concepts
- Implement and verify the PIM-SM protocol
- Implement enhanced Protocol-Independent Multicast - Sparse Mode (PIM-SM) features
- Implement Multicast Source Discovery Protocol (MSDP) in the interdomain environment
- Implement mechanisms for dynamic Rendezvous Point (RP) distribution

Prerequisites:

Attendees should meet the following prerequisites:

- Intermediate to advanced knowledge of Cisco Internetwork Operating System (Cisco IOS®) or IOS XE and Cisco IOS XR

Testing and Certification

Recommended as preparation for the following exams:

- **300-510** - Implementing Cisco Service Provider Advanced Routing Solutions (SPRI) exam

- Software configuration
- Knowledge of IPv4 and IPv6 TCP/IP networking
- Intermediate knowledge of BGP, OSPF, and ISIS routing protocols
- Understanding of MPLS technologies
- Understanding of multicast technologies
- Familiarity with segment routing
- SPCOR - Implementing and Operating Cisco Service Provider Network Core Technologies
- SPFNDU - Understanding Cisco Service Provider Network Foundations

Passing the **300-510** SPRI exam earns you the Cisco Certified Specialist - Service Provider Advanced Routing Implementation certification, and satisfies the concentration exam requirement for the [CCNP Service Provider](#) certification.

Content:

Implementing and Verifying Open Shortest Path First Multiarea Networks	Improving BGP Convergence and Implementing Advanced Operations	Implementing IP Multicast Concepts and Technologies
Implementing and Verifying Intermediate System to Intermediate System Multilevel Networks	Troubleshooting Routing Protocols	Implementing PIM-SM Protocol
Introducing Routing Protocol Tools, Route Maps, and Routing Policy Language	Implementing and Verifying MPLS	Implementing PIM-SM Enhancements
Implementing Route Redistribution	Implementing Cisco MPLS Traffic Engineering	Implementing Interdomain IP Multicast
Influencing Border Gateway Protocol Route Selection	Implementing Segment Routing	Implementing Distributed Rendezvous Point Solution in Multicast Network
Scaling BGP in Service Provider Networks	Describing Segment Routing Traffic Engineering (SR TE)	Labs
Securing BGP in Service Provider Networks	Deploying IPv6 Tunneling Mechanisms	<ul style="list-style-type: none"> ■ Implement OSPF Special Area Types (IPv4 and IPv6) ■ Implement Multiarea IS-IS ■ Implement Route Redistribution ■ Influence BGP Route Selection ■ Implement BGP Route Reflectors ■ Implement BGP Security Options ■ Troubleshoot Routing Protocols ■ Implement MPLS in the Service Provider Core ■ Implement Cisco MPLS TE ■ Configure and Verify Interior Gateway Protocol (IGP) Segment Routing ■ Implement Tunnels for IPv6 ■ Enable and Optimize PIM-SM ■ Implement PIM-SM Enhancements ■ Implement Rendezvous Point Distribution
