

Veeam Backup & Replication: Configure, Manage and Recover (VBRCMR)

Duration: 4 Days Course Code: VBRCMR Version: 13.0 Delivery Method: Company Event

Overview:

The Veeam® Backup & Replication™ v13: Configure, Manage and Recover training course is a four-day technical course focused on teaching IT professionals the skills to configure, manage and support a Veeam Backup & Replication v13 solution. With extensive hands-on labs, the class promotes situational resiliency in responding to recovery scenarios and enables administrators and engineers to effectively protect and manage data in an ever-changing technical and business environment, bringing tangible benefit to business in the digital world. This course is based on Veeam Backup & Replication v13, part of Veeam Data Platform.

Company Events

These events can be delivered exclusively for your company at our locations or yours, specifically for your delegates and your needs. The Company Events can be tailored or standard course deliveries.

Target Audience:

This course is suitable for anyone responsible for configuring, managing, or supporting a Veeam Backup & Replication v12.3 environment. It is also ideal for IT professionals across various roles, including backup administrators, disaster recovery specialists, system engineers, technical support staff, IT administrators, cloud administrators, cybersecurity professionals, compliance officers, monitoring specialists, reporting analysts, and security teams — reflecting the broad applicability of Veeam University PRO trainings.

Objectives:

- After completing this course, students will be able to:
- Articulate Veeam's data protection strategy
- Explain the role of each of Veeam's core components
- Configure and manage the Veeam Software Appliance
- Given a scenario, configure a backup job and backup copy job
- Protect physical servers with Veeam agents
- Configure unstructured data backup jobs (NAS/SMB shares, etc)
- Describe Veeam's replication capabilities
- Determine appropriate use case for backups, replicas and continuous data protection
- Ensure backup recoverability by leveraging SureBackup and immutable repositories
- Describe Veeam security concepts and how to implement within the product
- Configure malware detection and explain how to remediate
- Given a scenario, recover data from backups for VMs, agents and applications
- Articulate the enterprise products Veeam has developed plug-ins for
- Describe how to monitoring, reporting and alerting function
- Implement the enterprise manager
- Explain how to perform basic troubleshooting procedures and how to work with support

Prerequisites:

- Students should have fundamental IT experience working with networking, servers, storage, cloud, virtualization and operating systems.
- To get the most out of this course, students should be familiar

Testing and Certification

- VMCE is the foundational training required to qualify for the upcoming VMCE-E certification.
- To progress to this next-level Veeam certification, candidates must complete the designated courses in Veeam Backup & Replication,

with the core fundamental concepts of Veeam Backup & Replication through hands-on experience.

Veeam Data Platform: Monitor, Manage, Analyze (Veeam ONE), and Veeam Data Platform: Scale, Automate, Secure (Veeam Recovery Orchestrator).

Content:

Data Protection Strategies	Describe backup data protection mechanisms to avoid premature deletion and unwanted	Advanced recovery features
Review of key data protection strategies that ensure the safety of your data.	modifications. Identify characteristics and deployment steps of Linux Hardened Repositories	Explore some more in-depth recovery features of Veeam Backup and Replication.
Analysis of risks to data	to achieve backup data immutability.	Selecting the ideal recovery method
Explore different risk scenarios. What risks do we face daily within our environment?	Backup infrastructure optimization	What are the implications of different recovery methods and selecting the correct recovery method.
What is protected?	List deployment options and additional settings to improve general backup solution performance.	Enacting a recovery
Review of Veeam Data Platform and introduction to the class scenario.	Replication	Get practice in recovering different recovery types with a variety of data types.
Security and protection considerations	Describe use cases, architectures and features of replication jobs and continuous data protection (CDP) policies.	Malware Detection
Describe strategies and tools to secure the Veeam backup server to avoid unauthorized access and data leaks.	Long-term retention	Using Veeam's malware detection capabilities.
Protecting workloads	List different mechanisms for data archiving, including grandfather-father-son retention policies.	Post-incident processes
Efficiently protect VMware and Hyper-V virtual machines based on well-defined SLAs through the creation of backup jobs.	Scale-out Backup Repository™	Investigate post-incident activities.
Deploying agents	Describe architecture, placement policies, data tiers and management of Scale-out Backup Repositories.	Enterprise Plugins
Identify the use of protection groups to automate the installation of Veeam Agents and protect workloads with agent backup jobs.	Move and copy backups with VeeamMover	Learn which plug-ins Veeam currently supports and how they work
Unstructured data backup	Identify use cases for virtual machine and backup migrations with VeeamMover.	Monitoring, alerting and reporting
List required components and features available to protect unstructured data.	Recovery verification	Discover how to run reports and understand backup job status summaries
Optimizing your backups	Create automated tests to ensure recoverability from backups and replicas.	Troubleshooting
Analyze features and settings that allow backup storage optimization, faster backups and data consistency.	Veeam Backup Enterprise Manager	Understand the basics of troubleshooting Veeam issues and how to resolve with support
Backup copy jobs	Describe the use cases for Veeam Backup Enterprise Manager.	Veeam Calculators
		Where to find them and an intro on how to utilize

Ensure recoverability and adhere to the 3-2-1 Rule with backup copy jobs.

Immutability and hardened repositories

Incident Response Planning

Integrating Veeam Backup and Replication into your incident response plan.
