

## Veeam Backup & Replication: Configure, Manage and Recover (VBRCMR)

**Duration: 3 Days**    **Course Code: VMCE**    **Version: 12.1**    **Delivery Method: Virtual Learning**

### Overview:

The Veeam® Backup & Replication™ v12.1: Configure, Manage and Recover training course is a four-day technical course focused on teaching IT professionals the skills to configure, manage and support a Veeam Backup & Replication v12.1 solution. With extensive hands-on labs, the class promotes situational resiliency in responding to recovery scenarios and enables administrators and engineers to effectively protect and manage data in an ever-changing technical and business environment, bringing tangible benefit to business in the digital world. This course is based on Veeam Backup & Replication v12.1, part of Veeam Data Platform.

### Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

### Target Audience:

This course is suitable for anyone responsible for configuring, managing or supporting a Veeam Backup & Replication v12.1 environment.

### Objectives:

- **After completing this course, attendees will be able to:**
- Describe Veeam security concepts
- Given a scenario, configure a backup job and a backup copy job
- Explain network-attached storage (NAS) backups and configuration
- Describe Veeam's replication capabilities
- Determine appropriate use case for backups, replicas and/or continuous data protection
- Configure backup infrastructure components, including proxy and repository servers
- Given a scenario, evaluate when and how to apply immutability settings
- Given a scenario, recover data from backups

### Prerequisites:

- Students should have fundamental IT experience working with networking, servers, storage, cloud, virtualization and operating systems.
- To get the most out of this course, students should be familiar with the core fundamental concepts of Veeam Backup & Replication through hands-on experience

### Testing and Certification

- Completion of this course satisfies the prerequisite for taking Veeam Certified Engineer (VMCE™) v12 exam.

### Follow-on-Courses:

- VMCA - Veeam Backup & Replication: Architecture and Design

## Content:

Data protection strategies	Backup data optimizations?	Replication
Review of key data protection strategies that ensure the safety of your data.	Analyze features and settings that allow backup storage optimization, faster backups and data consistency	Describe use cases, architectures and features of replication jobs and continuous data protection (CDP) policies.?
Risk scenarios	Immutability and hardened repositories	Verifying recoverability
Explore different risk scenarios, what risks do we face daily within our environment?	Describe backup data protection mechanisms to avoid premature deletion and unwanted modifications. Identify characteristics and deployment steps of Linux Hardened Repositories to achieve backup data immutability.?	Create automated tests to ensure recoverability from backups and replicas.
Core components	Object storage?	Veeam Backup Enterprise Manager?
Review of Veeam Backup ; Replication components required in most deployments, their purpose and key system requirements.?	Review why backing up to object storage, which object storage solutions are supported and considerations when using this type of repositories.?	Describe the use cases for Veeam Backup Enterprise Manager.?
Initial security considerations	Transport modes?	Incident Response Planning?
Describe strategies and tools to secure the Veeam backup server to avoid unauthorized access and data leaks.	Analyze different ways data can be read from the production environment and their benefits and considerations.?	Integrating Veeam Backup and Replication into your incident response plan.?
Virtual machine backup	Backup copies	Recovery scenarios and features?
Efficiently protect VMware and Hyper-V virtual machines based on well-defined SLAs through the creation of backup jobs.	Ensure recoverability and adhere to the 3-2-1 Rule with backup copy jobs.	What are the implications of different recovery methods and selecting the correct recovery method.
Agent backup	Scale-out Backup Repository™	Enacting a recovery?
Identify the use of protection groups to automate the installation of Veeam Agents and protecting workloads with agent backup jobs.	Describe architecture, placement policies, data tiers and management of Scale-out Backup Repositories.	Get practice in recovering different recovery types with a variety of data types.?
Unstructured data backup	Moving or copying backups	Veeam Data Platform
List required components and features available to protect unstructured data.	Identify use cases for workload and backup migrations with VeeamMover.?	Identify and explain the purpose of each core product within the Veeam Data Platform and articulate potential use cases for them.?
