

Securing Kubernetes Clusters with Red Hat Advanced Cluster Security (DO430)

Varighed: 3 Days Kursus Kode: DO430 Leveringsmetode: Virtuel deltagelse

Beskrivelse:

Address security challenges by applying Red Hat Advanced Cluster Security for Kubernetes in an OpenShift cluster environment.

Customers want to learn how Red Hat Advanced Cluster Security for Kubernetes (RHACS) can help them solve their security challenges. However, their security teams might lack experience with Kubernetes and OpenShift, and so they have challenges with implementation. In particular, their security teams have several needs:

- Integrate RHACS with DevOps practices and know how to use it to automate DevSecOps, to enable their teams to operationalize and secure their supply chain, infrastructure, and workloads
- Assess compliance based on industry-standard benchmarks and get remediation guidance
- Apply vulnerability management, policy enforcement, and network segmentation to secure their workloads

RHACS customers might already be using external image registries and Security Information and Event Management (SIEM) tools. They need to integrate RHACS with their existing set of external components to achieve their security goals.

Note: Starting January 1, 2026, Red Hat introduces RHLS-Course — a flexible subscription model now included with this catalog offering. This replaces the previous direct virtual class enrollment from Global Knowledge.

When you purchase this item, you'll receive an RHLS subscription at the course level, giving you the freedom to choose the schedule that works best and self-enroll in your selected class.

Your RHLS subscription includes:

- One live, instructor-led virtual session
- 12 months of self-paced learning access
- One certification exam with a free retake

Onsite Classroom-based sessions and closed course options remain unchanged.

Updated Jan2026

Virtuel deltagelse

Et V&C Select kursus indholder nøjagtig det samme som et almindeligt kursus. Før kursusstart modtager man kursusmaterialet. Dernæst logger man på kurset via internettet og ser via sin pc den selvsamme præsentation som de øvrige deltagere, man kommunikerer via chat med underviseren og de øvrige deltagere på kurset. Denne uddannelsesmodel er både tids-og omkostningsbesparende og kan være et oplagt alternativ til almindelig klasseundervisning, hvis man f.eks. har et begrænset rejsebudget.

Målgruppe:

Security practitioners who are responsible for identifying, analyzing, and mitigating security threats within Kubernetes environments
Infrastructure administrators who are tasked with managing and securing Kubernetes clusters and ensuring that the infrastructure is robust and compliant with security standards
Platform engineers who follow DevOps and DevSecOps practices, who integrate security into the CI/CD pipeline, to ensure the secure deployment and continuous monitoring of containerized applications

Agenda:

- After this course participants should be able to:
 - Identify and close security gaps in network policies by using Network Graph and apply the generated network policies in a CI/CD pipeline
- Describe and implement the RHACS architecture and its components, follow recommended practices for its installation, and troubleshoot common installation issues
 - Run in-built compliance scans, and install and run the compliance operator to determine cluster compliance with security policies and standards and to produce reports and evidence of compliance
- Interpret vulnerability scanning results, generate vulnerability reports, and evaluate risks to prioritize your security actions
 - Integrate RHACS with external components to provide additional functions, which include centralized alert notification, backup and restore, and identity and permission management
- Implement and enforce RHACS policies across all stages of policy enforcement to secure the CI/CD pipeline and to protect the software supply chain

Forudsætninger:

- Red Hat OpenShift Administration II: Configuring a Production

Test og certificering

- Red Hat Certified Specialist in OpenShift Advanced Cluster Security

Cluster | DO280 is a prerequisite or equivalent knowledge
