

Red Hat Container Adoption Boot Camp for Developers

Varighed: 10 Days Kursus Kode: DO720 Leveringsmetode: Virtuel deltagelse

Beskrivelse:

Supporting the adoption of container technology through the development of container-native applications

The Container Adoption Boot Camp for Developers (DO720) immerses you in intensive, hands-on development of container-native applications deployed on Red Hat's implementation of Kubernetes, Red Hat® OpenShift® Container Platform. As part of enrollment, you will receive one year of Red Hat Learning Subscription Standard, which gives you unlimited access to all of our courses online, plus up to five certification exams and two retakes. This boot camp is for those seeking to make a quantum leap in their journey toward digital transformation. Making this shift involves developing software in tight iterations so that business value can be realized sooner. In order to accomplish this goal, this offering can facilitate the adoption of container-native applications, including microservices.

This collection of courses is based on Red Hat OpenShift Container Platform 4.10.

Note: This course is five days. Durations may vary based on the delivery. For full course details, scheduling, and pricing, select your location then "get started" on the right hand menu.

Course content summary

- Introduction to containers, Kubernetes, and Red Hat OpenShift
- Deploy and manage applications on an OpenShift cluster
- Build and design containerized applications for OpenShift
- Create microservice-based applications with Quarkus
- Deploy microservices to an OpenShift cluster
- Build resilient services with Red Hat OpenShift Service Mesh
- Secure an OpenShift service mesh

Virtuel deltagelse

Et V&C Select kursus indholder nøjagtig det samme som et almindeligt kursus. Før kursusstart modtager man kursusmaterialet. Dernæst logger man på kurset via internettet og ser via sin pc den selvsamme præsentation som de øvrige deltagere, man kommunikerer via chat med underviseren og de øvrige deltagere på kurset. Denne uddannelsesmodel er både tids- og omkostningsbesparende og kan være et oplagt alternativ til almindelig klasseundervisning, hvis man f.eks. har et begrænset rejsebudget.

Målgruppe:

Developers interested in adopting container technology and developing microservices.

Agenda:

- | | |
|---|---|
| ■ You should be able to demonstrate these skills: | ■ Create a multi-container application template. |
| ■ Create and manage custom container images. | ■ Implement health checks to improve system reliability. |
| ■ Deploy applications to OpenShift Container Platform. | ■ Implement unit and integration tests for microservices. |
| ■ Develop microservices using Quarkus. | ■ Use the Config specification to inject data into a microservice. |
| ■ Design container images to containerize applications. | ■ Implement fault tolerance in a microservice using OpenShift Service Mesh. |
| ■ Customize application builds and implement post-commit build hooks. | ■ Secure an OpenShift Service Mesh. |

Forudsætninger:

- Become a Red Hat Certified System Administrator (RHCSA), or demonstrate equivalent experience
- Red Hat Application Development I: Programming in Java EE (AD183), or experience with Java EE development
- DO283 - Red Hat Application Development: Building

Yderligere Kurser:

■ EX288 - Red Hat Certified Specialist in OpenShift Application Development Exam

Indhold:

Introduction to container technology	Publish enterprise container images	Test microservices
Describe how software can run in containers orchestrated by OpenShift Container Platform.	Create an enterprise registry and publish container images to it.	Implement unit and integration tests for microservices.
Create containerized services	Build applications	Secure microservices
Provision a service using container technology.	Describe the OpenShift build process, build triggers, and manage builds.	Secure a microservice using OAuth.
Manage containers	Create applications from OpenShift templates	Monitor microservices
Modify prebuilt container images to create and manage containerized services.	Describe the elements of a template and create a multi-container application template.	Monitor the operation of a microservice using metrics, distributed tracing, and log aggregation.
Manage container images	Manage application deployments	Introduction to Red Hat OpenShift Service Mesh
Manage the life cycle of a container image from creation to deletion.	Monitor application health and implement various deployment methods for cloud-native applications.	Describe the basic concepts of microservice architecture and OpenShift Service Mesh.
Create custom container images	Implement continuous integration and continuous deployment pipelines in OpenShift	Observe a service mesh
Design and code a Dockerfile to build a custom container image.	Create and deploy Jenkins pipelines to facilitate continuous integration and deployment with OpenShift.	Trace and visualize an OpenShift Service Mesh with Jaeger and Kiali.
Deploy containerized applications	Describe microservice architectures	Control service traffic
Deploy applications on OpenShift Container Platform.	Describe components and patterns of microservice-based application architectures.	Manage and route traffic with OpenShift Service Mesh
Deploy multi-container applications	Implement a microservice with Quarkus	Release applications with OpenShift Service Mesh
Deploy applications that are containerized using multiple container images.	Deploy Red Hat OpenShift Service Mesh on OpenShift Container Platform.	Release applications with canary and mirroring release strategies.
Troubleshoot containerized applications	Test microservices	Test service resilience with chaos testing
Troubleshoot a containerized application deployed on OpenShift.	Implement unit and integration tests for microservices.	Test the resiliency of an OpenShift Service Mesh with chaos testing.
Deploy and manage applications on an OpenShift cluster	Deploy microservice-based applications	Build resilient services
Deploy applications using various application packaging methods to an OpenShift cluster and manage their resources.	Deploy Quarkus microservice applications to	Use OpenShift Service Mesh strategies to create resilient services.

Design containerized applications for OpenShift	an OpenShift cluster.	
Select a containerization method for an application and create a container to run on an OpenShift cluster.	Build microservice applications with Quarkus	Secure an OpenShift Service Mesh
	Build a persistent and configurable distributed quarkus microservices application.	Secure and encrypt services in your application with OpenShift Service Mesh.

Additional Information:

Technology considerations

Internet access is required for this course in order to access the OpenShift shared and dedicated clusters.

Impact on the organization

This boot camp is intended to provide developers who have basic to intermediate knowledge of containers with the foundational and advanced skills needed to develop, deploy, and troubleshoot microservices applications with Red Hat OpenShift Container Platform. Red Hat OpenShift Container Platform enables rapid application development and deployment, as well as portability of an application across environments. The platform also offers simplified application scaling, administration, and maintenance of adaptive or cloud-native applications.

Impact on the individual

As a result of attending this course, you should be able to install, configure, and manage a Red Hat OpenShift Container Platform cluster and deploy applications on it.
