

PostgreSQL Basics

Varighed: 2 Days Kursus Kode: GK840202 Leveringsmetode: Virtuel deltagelse

Beskrivelse:

Learn the essentials of PostgreSQL and enhance your database management skills.

PostgreSQL Basics provides a solid foundation in PostgreSQL, a powerful open-source relational database system. You'll learn how to install, configure, and manage PostgreSQL in a development environment. The course covers essential topics such as working with different data types, writing SQL queries, designing efficient database schemas, and optimizing query performance. Additionally, you'll explore transaction management, user and role management, and basic security policies to ensure data integrity and security. By the end of the course, you'll have the skills to effectively manage PostgreSQL databases and perform fundamental backup and restore operations. The course combines theoretical knowledge with practical exercises, ensuring you can apply what you learn in real-world scenarios. Join us to unlock the full potential of PostgreSQL and enhance your database management skills.

Virtuel deltagelse

Et V&C Select kursus indholder nøjagtig det samme som et almindeligt kursus. Før kursusstart modtager man kursusmaterialet. Dernæst logger man på kurset via internettet og ser via sin pc den selvsamme præsentation som de øvrige deltagere, man kommunikerer via chat med underviseren og de øvrige deltagere på kurset. Denne uddannelsesmodel er både tids-og omkostningsbesparende og kan være et oplagt alternativ til almindelig klasseundervisning, hvis man f.eks. har et begrænset rejsebudget.

Målgruppe:

- Software developers

- Data scientists
- System administrators
- Technical professionals.

Agenda:

- | | |
|---|--|
| ■ Install and configure PostgreSQL in a development environment | ■ Manage basic transactions and understand isolation levels |
| ■ Select and implement fundamental data types including numeric, character, and date/time types | ■ Execute concurrent operations safely using proper transaction management |
| ■ Write essential SQL queries using basic joins, filtering, and aggregations | ■ Create and manage users and roles with appropriate privileges using GRANT/REVOKE |
| ■ Design normalized database schemas and implement key constraints for data integrity | ■ Implement basic security policies and access controls |
| ■ Understand and implement B-tree indexes to optimize common query patterns | ■ Perform fundamental backup and restore operations |

Forudsætninger:

- Foundational knowledge of databases, operating systems, networking, and programming
- GK3150 - Understanding Networking Fundamentals
- GK840203 - Introduction to Programming

Indhold:

Module 1: Introduction to PostgreSQL

- Introducing PostgreSQL

Module 2: Installation and Configuration

- Configuring PostgreSQL for optimal performance
- Using two ways to modify PostgreSQL settings
- Locating PostgreSQL configuration files
- Configuring PostgreSQL for remote connections
- Managing client access with pg_hba.conf

Module 3: Data Types and Table Basics

- Tables in PostgreSQL
- Integer data type
- Numeric or Decimal data type
- Character data type
- Date/Time data type
- Boolean data type
- Arrays
- JSON data type
- Special data types
- Using PostgreSQL for vector storage

Module 4: SQL Fundamentals

- Adding, updating, and deleting table data
- SELECT syntax
- WHERE clause and filtering with comparison operators
- Combining conditions with logical operators
- Pattern matching with LIKE and wildcards
- Range filtering in SQL
- Combining BETWEEN with other operators
- Working with NULL values and combining NULL checks with other conditions
- Combining data with JOINS

Module 5: Database Design and Management

- Entities and relationships
- Normalization task
- Trade off from denormalization
- Table relationships
- Constraint types and usage
- Subqueries for querying and data base manipulation
- Removing duplicate rows
- Cartesian product
- Schema organization

Module 6: Indexing and Performance

- Indexing fundamentals
- Optimizing index usage in PostgreSQL
- Query performance analysis
- Using EXPLAIN and EXPLAIN ANALYZE
- Identifying common query issues
- Query optimization techniques
- Auto vacuum and index maintenance

Module 7: Transaction Management

- Common errors in transaction management
- Transaction isolation levels
- Query performance analysis
- Handling concurrent access
- Deadlock prevention and resolution

Module 8: Security Implementation

- Checking current privileges
- Auditing privileges
- Principle of Least Privilege
- Schema permissions
- Object privileges
- Password policies
- Basic backup and recovery
