
Getting Started with Kubernetes and Google Container Engine

Varighed: 1 Day Kursus Kode: GO6591 Leveringsmetode: Virtuel deltagelse

Beskrivelse:

This five-hour class equips you to containerize workloads in Docker containers, deploy them to Kubernetes clusters provided by Google Kubernetes Engine, and scale those workloads to handle increased traffic. Students also learn how to continuously deploy new code in a Kubernetes cluster to provide application updates. Learn to containerize workloads in Docker containers, deploy them to Kubernetes clusters provided by Google Kubernetes Engine, and scale those workloads to handle increased traffic. You also learn how to continuously deploy new code in a Kubernetes cluster to provide application updates.

Virtuel deltagelse

Et V&C Select kursus indholder nøjagtig det samme som et almindeligt kursus. Før kursusstart modtager man kursusmaterialet. Dernæst logger man på kurset via internettet og ser via sin pc den selvsamme præsentation som de øvrige deltagere, man kommunikerer via chat med underviseren og de øvrige deltagere på kurset. Denne uddannelsesmodel er både tids-og omkostningsbesparende og kan være et oplagt alternativ til almindelig klasseundervisning, hvis man f.eks. har et begrænset rejsebudget.

Målgruppe:

This class is intended for the following participants: Application developers, Cloud Solutions Architects, DevOps Engineers, IT managers. Individuals using Google Cloud Platform to create new solutions or to integrate existing systems, application environments, and infrastructure with the Google Cloud Platform.

Agenda:

- | | |
|--|---|
| ■ At the end of the course, you will be able to: | ■ Understand Kubernetes concepts and principles. |
| ■ Understand container basics. | ■ Deploy applications to Kubernetes using the CLI. |
| ■ Containerize an existing application. | ■ Set up a continuous delivery pipeline using Jenkins |
-

Forudsætninger:

To get the most out of this course, participants should have:

- Basic proficiency with command-line tools and Linux operating system environments, as well as Web server
 - Systems Operations experience including deploying and managing applications, either on-premises or in a public cloud environment.
-

Indhold:

This course includes presentations and

Acquaint yourself with containers, Docker, and the Google Container Registry.

- Create a container.
- Package a container using Docker.
- Store a container image in Google Container Registry.
- Launch a Docker container. Module 2: Kubernetes Basics

Deploy an application with microservices in a Kubernetes cluster.

- Provision a complete Kubernetes cluster using Kubernetes Engine.
- Deploy and manage Docker containers using kubectl.
- Break an application into microservices using Kubernetes' Deployments and Services. Module 3: Deploying to Kubernetes

Create and manage Kubernetes deployments.

- Create a Kubernetes deployment.
- Trigger, pause, resume, and rollback updates.
- Understand and build canary deployments. Module 4: Continuous Deployment with Jenkins

Build a continuous delivery pipeline.

- Provision Jenkins in your Kubernetes cluster.
- Create a Jenkins pipeline.
- Implement a canary deployment using Jenkins.
