

Learning DAX

Varighed: 1 Day Kursus Kode: M-DAX Leveringsmetode: Virtuel deltagelse

Beskrivelse:

Every Power BI user who needs to add analytical power to a Power BI model not available in the data as-is requires DAX skills. DAX is not a language that can be learned by just starting in practice and building from there; theoretical knowledge is a requirement! That is why this 1 day training is offered. Questions like "when do I use a calculated column, when do I use a measure?", "how does row- and filter context work exactly?", "How do I create a table in DAX", and much more. All parts of the DAX language that are required to be able to write DAX will be covered, including sufficient exercises in order to obtain hands-on experience.

Virtuel deltagelse

Et V&C Select kursus indholder nøjagtig det samme som et almindeligt kursus. Før kursusstart modtager man kursusmaterialet. Dernæst logger man på kurset via internettet og ser via sin pc den selvsamme præsentation som de øvrige deltagere, man kommunikerer via chat med underviseren og de øvrige deltagere på kurset. Denne uddannelsesmodel er både tids-og omkostningsbesparende og kan være et oplagt alternativ til almindelig klasseundervisning, hvis man f.eks. har et begrænset rejsebudget.

Målgruppe:

Everyone who performs data analysis, including: Risk Managers, Financials, Analysts, Controllers, HR-Advisors, Customer Journey Experts, etc

Agenda:

- Learn to:
 - Understand the difference between row- and filter context
- Decide when to use a measure and when to use a calculated column
 - Ignore filter context using ALL
- Aggregate a column in a measure
 - Use variables in order to make DAX code easier to read
- Aggregate an expression in a measure
 - Use variables in order to use the correct evaluation context
- Use the different groups of functions within DAX
 - Use CALCULATE in order to manipulate the filter context
- Create relationships between tables
 - Use CALCULATE in order to trigger evaluation context transition
- Filter a table by another table
 - Use Semi-Additive measures to adjust the summative filter context
- Use normal -and bidirectional filtering
 - Use Time Intelligence functions
- Apply table functions
 - Set up and Use Row-Level-Security to ensure the highest level of security on your data

Forudsætninger:

Basic knowledge of Power BI. The M-DA100 would fulfill the basic requirements. Some previous DAX experience is nice-to-have but not a requirement.

Test og certificering
