

Red Hat Satellite 6 Administration with exam (RH404)

Varighed: 5 Days Kursus Kode: RH404 Leveringsmetode: Virtuel deltagelse

Beskrivelse:

Learn how to configure Red Hat Satellite 6 to deploy and manage Red Hat Enterprise Linux systems and software. Red Hat Satellite 6 Administration with exam (RH404) explores and validates the concepts and methods necessary for successful large-scale management of Red Hat® Enterprise Linux® systems. You will learn and demonstrate your ability to configure Red Hat Satellite 6 on a server and populate it with software packages. You will use Red Hat Satellite to manage the software development life cycle of a subscribed host and its configuration, and learn how to provision hosts integrated with software and Ansible® configuration management upon deployment. This offering includes the Red Hat Certified Specialist in Deployment and Systems Management exam (EX403) and is based on Red Hat Enterprise Linux 8 and Red Hat Satellite 6.11.

Virtuel deltagelse

Et V&C Select kursus indholder nøjagtigt det samme som et almindeligt kursus. Før kursusstart modtager man kursusmaterialet. Dernæst logger man på kurset via internettet og ser via sin pc den selvsamme præsentation som de øvrige deltagere, man kommunikerer via chat med underviseren og de øvrige deltagere på kurset. Denne uddannelsesmodel er både tids-og omkostningsbesparende og kan være et oplagt alternativ til almindelig klasseundervisning, hvis man f.eks. har et begrænset rejsebudget.

Målgruppe:

Senior Red Hat Enterprise Linux system administrators responsible for the management of multiple servers

Agenda:

- Verify a Red Hat Satellite 6.11 installation.
- Regulate Red Hat Satellite with organizations, locations, users, and roles.
- Manage software with Red Hat Satellite environments and content views.
- Use Red Hat Satellite to configure hosts with Ansible playbooks and roles.
- Provision hosts with integrated software and configuration management.
- Implement Metal-as-a-Service (MaaS) with Satellite discovery and provisioning of unprovisioned hosts.

Forudsætninger:

Recommended for this offering

- Be a Red Hat Certified Engineer (RHCE®) or demonstrate equivalent experience
- Achieve Red Hat Certified Engineer (RHCE) certification, or equivalent experience.
- Have experience with Red Hat Satellite 6

Indhold:

Plan and deploy Red Hat Satellite	Deploy custom software	Plan a Red Hat Satellite deployment on a cloud platform
Plan a Red Hat Satellite deployment, then perform installation and initial configuration of Red Hat Satellite servers.	Create, manage, and deploy custom software products and repositories.	Plan a Red Hat Satellite deployment, installation, and initial configuration on a cloud platform.
Manage software life cycles	Deploy Satellite capsule servers	Perform Red Hat Satellite server maintenance
Create and manage Red Hat software deployment life cycle environments.	Perform installation and initial configuration of Red Hat Satellite capsule servers as components of a deployment plan.	Manage Red Hat Satellite for security, recoverability, and growth.
Register hosts	Provision hosts	Comprehensive review
Register and configure your Red Hat Enterprise Linux systems to use Red Hat Satellite, then organize those systems into groups for easier management.	Configure Satellite server for host deployment and perform host provisioning.	Install and configure Red Hat Satellite Server, then provision content hosts.
Deploy software to hosts	Manage Red Hat Satellite using the API	Note: Course outline is subject to change with technology advances and as the nature of the underlying job evolves.
Manage software deployment to registered hosts of your Red Hat Satellite infrastructure and practice managing environment paths, life cycle environments, and content views.	Integrate Red Hat Satellite functionality with custom scripts or external applications that access the API over HTTP.	

Additional Information:

Impact on the organization

This offering develops and validates the skills needed to more efficiently design, configure, test, and deploy computer systems within an organization. The ability to apply these skills will reduce unexpected downtime of systems and facilitate more efficient deployment of new systems, applications, and features.

Red Hat has created this offering in a way intended to benefit our customers, but each company and infrastructure is unique, and actual results or benefits may vary.

Impact on the individual

As a result of completing this offering, you should be able to employ the software development life cycle process to plan, create, test, and provision host systems within an organization.

Recommended next course or exam

[Red Hat Security: Linux in Physical, Virtual, and Cloud \(RH415\)](#)

Manage the secure operation of servers running Red Hat® Enterprise Linux®, whether deployed on physical hardware, as virtual machines, or as cloud instances

[Red Hat Certified Specialist in Deployment and Systems Management exam \(EX403\)](#)

Demonstrate your knowledge, skills, and ability to use Red Hat products, including Red Hat® Enterprise Linux® and Red Hat Satellite Server, to deploy and manage systems in an efficient, scalable, replicable, and reliable manner.

[Developing Advanced Automation with Red Hat Ansible Automation Platform \(DO374\)](#)

Advance your Ansible skills and develop automation that scales by applying recommended practices with the new, container focused tools from Red Hat Ansible Automation Platform.
