

IBM Cognos Analytics: Modeling with Data Modules (v11.2)

Varighed: 1 Day Kursus Kode: B6320G Leveringsmetode: Virtuel deltagelse

Beskrivelse:

This course provides a high-level overview of the IBM Cognos Analytics Data Module tool and its underlying architecture to provide learners with the skills necessary to master data modeling using the web-based, self-service capabilities of IBM Cognos Analytics Data Modules. Learners will explore the essential steps in building data modules, from understanding the purpose and workflow of data modeling to creating, refining, and optimizing data structures. The course covers various topics, including relationship joins, data enrichment with calculations and filters, creating navigation paths, and managing data security.

Learners will gain hands-on experience through exercises that enhance their ability to create and customize data modules, ensuring consistency and usability for reporting, dashboarding, and exploration purposes.

By the end of this course, learners should be proficient in developing data modules that integrate multiple data sources, support business analysis, and facilitate informed decision[1]making within the IBM Cognos environment.

Virtuel deltagelse

Et V&C Select kursus indholder nøjagtig det samme som et almindeligt kursus. Før kursusstart modtager man kursusmaterialet. Dernæst logger man på kurset via internettet og ser via sin pc den selvsamme præsentation som de øvrige deltagere, man kommunikerer via chat med underviseren og de øvrige deltagere på kurset. Denne uddannelsesmodel er både tids-og omkostningsbesparende og kan være et oplagt alternativ til almindelig klasseundervisning, hvis man f.eks. har et begrænset rejsebudget.

Målgruppe:

This course is intended for data professionals, business analysts, and technical users who are involved in data preparation, reporting, and business intelligence within their organization.

Agenda:

- After completing this course, learners should be able to:
- List several options for data modeling in Cognos Analytics
- Explain the data modeling workflow
- Explain how to use AI to discover related tables
- Describe relationships and relationship joins
- Create and manage custom tables
- Describe how to create calculations and filters
- Describe how to create Navigation Paths
- Explain how to relink a Data Module
- Create and use column dependencies

Forudsætninger:

Participants should have the following skills:

- An understanding of your organizations business intelligence process and reporting needs
- Experience using basic Windows functionality
- An understanding of Cognos reporting

Indhold:

Course Introduction

Unit 1. Data Modeling in Cognos Analytics

Unit 2. Create a Data Module

Unit 3. Modify and Refine a Data Module

Unit 4. Create Relationship Joins

Unit 5. Customize Data Modules using Filters and Calculations

Unit 6. Group Data and Create Navigation Paths

Unit 7. Share a Data Module

Unit 8. Advanced Functionality in Data Modules
