

## Db2 12 for z/OS SQL Performance and Tuning

Varighed: 3 Days    Kursus Kode: CV964G    Leveringsmetode: Virtuel deltagelse

### Beskrivelse:

This course is designed to teach the students how to prevent SQL performance problems and how to improve the performance of existing SQL.

Virtuel deltagelse

Et V&C Select kursus indholder nøjagtig det samme som et almindeligt kursus. Før kursusstart modtager man kursusmaterialet. Dernæst logger man på kurset via internettet og ser via sin pc den selvsamme præsentation som de øvrige deltagere, man kommunikerer via chat med underviseren og de øvrige deltagere på kurset. Denne uddannelsesmodel er både tids-og omkostningsbesparende og kan være et oplagt alternativ til almindelig klasseundervisning, hvis man f.eks. har et begrænset rejsebudget.

### Målgruppe:

This course is for Db2 12 for z/OS application developers, Db2 12 for z/OS DBAs, and anyone else with a responsibility for SQL performance and tuning in a Db2 12 for z/OS environment.

### Agenda:

- |                                                                               |                                                                                                 |
|-------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|
| ■ After completing this course, students will be able to:                     | ■ Work with subqueries                                                                          |
| ■ Understand and design better indexes                                        | ■ Avoid locking problems                                                                        |
| ■ Determine how to work with the optimizer (avoid pitfalls, provide guidance) | ■ Use accounting traces and other tools to locate performance problems in existing SQL and more |
| ■ Optimize multi-table access                                                 |                                                                                                 |

### Forudsætninger:

- Familiarity with SQL
- Familiarity with Db2 12 for z/OS
- Familiarity with Db2 12 for z/OS application programming

## Indhold:

- |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
