

Developing Decision Services in IBM Operational Decision Manager?

Varighed: 2 Days Kursus Kode: WB406G Leveringsmetode: Virtuel deltagelse

Beskrivelse:

This course teaches developers how to design and develop decision services with IBM Operational Decision Manager 8.11.1. The course begins with an overview of Operational Decision Manager, which is composed of two main environments: Decision Server for technical users and Decision Center for business users. The course outlines the collaboration between development and business teams during project development. Through hands-on exercises, you learn how to design decision services and implement object models in Rule Designer. You learn how to support business users by setting up the rule authoring environment. And you enable rule testing and simulation so business users can ensure that their rulesets produce the correct outcome. The lab environment for this course uses Windows Server 2019 Standard.

Virtuel deltagelse

Et V&C Select kursus indholder nøjagtigt det samme som et almindeligt kursus. Før kursusstart modtager man kursusmaterialet. Dernæst logger man på kurset via internettet og ser via sin pc den selvsamme præsentation som de øvrige deltagere, man kommunikerer via chat med underviseren og de øvrige deltagere på kurset. Denne uddannelsesmodel er både tids-og omkostningsbesparende og kan være et oplagt alternativ til almindelig klasseundervisning, hvis man f.eks. har et begrænset rejsebudget.

Målgruppe:

This course is designed for developers.

Agenda:

- | | |
|--|--|
| ■ After completing this course, you should be able to: | ■ Exercise 1. Operational Decision Manager in action |
| ■ Describe the benefits of implementing a decision management solution with Operational Decision Manager | ■ Exercise 2. Setting up decision services |
| ■ Identify the key user roles that are involved in designing and developing a decision management solution, and the tasks that are associated with each role | ■ Exercise 3. Working with ruleflows |
| ■ Describe the development process of building a business rule application and the collaboration between business and development teams | ■ Exercise 4. Working with the BOM |
| ■ Set up the Business Object Model (BOM) and vocabulary for rule authoring | ■ Exercise 5. Refactoring |
| ■ Implement the Execution Object Model (XOM) that enables rule execution | ■ Exercise 6. Exploring action rules |
| ■ Orchestrate rule execution through ruleflows | ■ Exercise 7. Authoring action rules |
| ■ Author rule artifacts to implement business policies | ■ Exercise 8. Authoring decision tables |
| ■ Set up and customize rule validation for business users to ensure | ■ Exercise 9. Enabling rule validation |

Forudsætninger:

Before taking this course, you should have:

- Experience with the Java programming language and object-oriented concepts
 - Basic knowledge of Extensible Markup Language (XML)
-
