IBM Business Automation Workflow 23.0.2: Controlling Process Flow using Data and Services and Coaches

Varighed: 2 Days   Kursus Kode: WB876G   Leveringsmetode: Virtuel deltagelse

Beskrivelse:

This two-day intermediate-level course covers the modeling of process flow, sequence flow, tokens, gateways, and intermediate events using IBM Business Automation Workflow (BAW)
Using the core requirements for an HR recruitment process, you determine and create all the necessary assets to support a coach in the Hiring Request Process. You use complex business objects to organize your data, and pass data into and out of a linked process. You implement a service for an activity, and map variables between a nested service and an activity. You also create a toolkit to enable sharing of your assets. The course concludes with conducting a Playback session. You demonstrate the process, following various paths that flow from the exclusive gateways in the process and demonstrate tasks that are assigned.

Virtuel deltagelse

Et V&C Select kursus indholder nøjagtig det samme som et almindeligt kursus. Før kursusstart modtager man kursusmaterialet. Dernæst logger man på kurset via internettet og ser via sin pc den selvsamme præsentation som de øvrige deltagere, man kommunikerer via chat med underviseren og de øvrige deltagere på kurset. Denne uddannelsesmodel er både tids-og omkostningsbesparende og kan være et oplagt alternativ til almindelig klasseundervisning, hvis man f.eks. har et begrænset rejsebudget.

Målgruppe:

This course is designed for project members who design and implement detailed logic, data models, and external system integrations for an executable business process. These roles include process owners, process analysts, workflow authors, workflow developers, process server administrators, and BPM project managers.

Agenda:

- After completing this course, you should be able to:

- Model conditional sequence flows in a process model by adding gateways.

- Model a business process escalation path with an attached timer intermediate event.

- Implement an activity by attaching a service and mapping data.

- Add variables and business objects to a process application.

- Perform a playback to demonstrate that the process follows the various paths modeled.

- Use coaches to define and implement guided user interactions.

- Create a client-side human service.

Forudsætninger:

Before taking this course, you should have:

- Practical knowledge of data structures
- Understanding of SQL syntax and JavaScript
- Basic understanding of web services
- Experience with modern programming techniques

WB877G IBM Business Automation Workflow 23.0.2: Advanced Routing, Integrations, and Error Handling

Indhold:

- Course introduction
- Unit 1: Controlling process flow
- Exercise 1: Controlling process flow
- Unit 2: Controlling process flow with business data
- Exercise 2: Controlling process flow with business data
- Unit 3: Business data, services, and coaches
- Exercise 3: Business data, services, and coaches
- Unit 4: Enhancing coaches
- Exercise 4: User interface design and implementation
- Exercise 5: Conducting the Playback session
- Course summary
