VMware vRealize Operations for Operators

Varighed: 2 Days   Kursus Kode: VMVROMO   Version: 6.x

Beskrivelse:

This two-day course is designed for data center operators who are responsible for the day-to-day management of a VMware vSphere® environment using VMware vRealize® Operations™. This course will teach you how to use vRealize Operations as a forensic and predictive tool. The course is based on VMware ESXi™ 6.5, VMware vCenter Server® 6.5, and vRealize Operations 6.6.

Note: If you have taken the VMware vRealize Operations Manager: Install, Configure, Manage course, duplicate content makes this course unsuitable for you.

Product Alignment:

- vRealize Operations 6.6
- ESXi 6.5
- vCenter Server 6.5

Målgruppe:

Operators responsible for the day-to-day operation of a vSphere environment.

Agenda:

- By the end of the course, you should be able to meet the following objectives:

- • Navigate the VMware vRealize® Operations Manager™ user interface

- • Use views and reports to gather information about the environment

- • Use alerts and analysis badges to troubleshoot common and complex vSphere operational issues

- • Monitor capacity risk and infrastructure utilization, and perform capacity planning and what-if analyses

- • Use tags and groups to logically organize objects, for example, by application, by organization, or by

- location

- • Configure policies to meet the operational needs of your environment

Forudsætninger:

- • VMware vSphere: Install, Configure, Manage [V6.5]

- • VMware vSphere: Optimize and Scale [V6.5]

Indhold:

Course Introduction

- Introductions and course logistics

- Course objectives
- Describe the features and benefits of vRealize Operations
- Explain the importance of inventory trees
- View widgets and dashboards on the Home page
- View inventory trees and objects on the Environment page
- Create reports about the environment
- Explain how data is collected and analyzed by vRealize Operations
- List the functions of the analytics component
- Discuss key indicators in the user interface that provide warnings about potential problems
- Use alerts to identify root causes for performance, capacity, and utilization problems
- Use symptoms to indicate a potential problem
- Use badges to visually analyze your environment to identify good or bad conditions for the entire environment
- Troubleshoot system health alerts
- Troubleshoot a user's performance problem
- Use health weather maps and heat maps to monitor system health
- Discuss capacity planning models
- Monitor for capacity risk in the environment
- Troubleshoot risk issues
- Troubleshoot efficiency issues
- Identify ways to optimize resource use
- Use projects to perform what-if scenarios
- Create custom object groups in the environment
- Import and export content
- Create policies for various types of workloads

- Course objectives
- Describe the features and benefits of vRealize Operations
- Explain the importance of inventory trees
- View widgets and dashboards on the Home page
- View inventory trees and objects on the Environment page
- Create reports about the environment
- Explain how data is collected and analyzed by vRealize Operations
- List the functions of the analytics component
- Discuss key indicators in the user interface that provide warnings about potential problems
- Use alerts to identify root causes for performance, capacity, and utilization

(Column 2)

- Course objectives
- Describe the features and benefits of vRealize Operations
- Explain the importance of inventory trees
- View widgets and dashboards on the Home page
- View inventory trees and objects on the Environment page
- Create reports about the environment
- Explain how data is collected and analyzed by vRealize Operations
- List the functions of the analytics component
- Discuss key indicators in the user interface that provide warnings about potential problems
- Use alerts to identify root causes for performance, capacity, and utilization problems
- Use symptoms to indicate a potential problem
- Use badges to visually analyze your environment to identify good or bad conditions for the entire environment
- Troubleshoot system health alerts
- Troubleshoot a user's performance problem
- Use health weather maps and heat maps to monitor system health
- Discuss capacity planning models
- Monitor for capacity risk in the environment
- Troubleshoot risk issues
- Troubleshoot efficiency issues
- Identify ways to optimize resource use
- Use projects to perform what-if scenarios
- Create custom object groups in the environment
- Import and export content
- Create policies for various types of workloads

- Course objectives
- Describe the features and benefits of vRealize Operations
- Explain the importance of inventory trees
- View widgets and dashboards on the Home page
- View inventory trees and objects on the Environment page
- Create reports about the environment
- Explain how data is collected and analyzed by vRealize Operations
- List the functions of the analytics component
- Discuss key indicators in the user interface that provide warnings about potential problems
- Use alerts to identify root causes for performance, capacity, and utilization

(Column 3)

- Course objectives
- Describe the features and benefits of vRealize Operations
- Explain the importance of inventory trees
- View widgets and dashboards on the Home page
- View inventory trees and objects on the Environment page
- Create reports about the environment
- Explain how data is collected and analyzed by vRealize Operations
- List the functions of the analytics component
- Discuss key indicators in the user interface that provide warnings about potential problems
- Use alerts to identify root causes for performance, capacity, and utilization problems
- Use symptoms to indicate a potential problem
- Use badges to visually analyze your environment to identify good or bad conditions for the entire environment
- Troubleshoot system health alerts
- Troubleshoot a user's performance problem
- Use health weather maps and heat maps to monitor system health
- Discuss capacity planning models
- Monitor for capacity risk in the environment
- Troubleshoot risk issues
- Troubleshoot efficiency issues
- Identify ways to optimize resource use
- Use projects to perform what-if scenarios
- Create custom object groups in the environment
- Import and export content
- Create policies for various types of workloads

- Course objectives
- Describe the features and benefits of vRealize Operations
- Explain the importance of inventory trees
- View widgets and dashboards on the Home page
- View inventory trees and objects on the Environment page
- Create reports about the environment
- Explain how data is collected and analyzed by vRealize Operations
- List the functions of the analytics component
- Discuss key indicators in the user interface that provide warnings about potential problems
- Use alerts to identify root causes for performance, capacity, and utilization problems

problems
- Use symptoms to indicate a potential problem
- Use badges to visually analyze your environment to identify good or bad conditions for the entire environment
- Troubleshoot system health alerts
- Troubleshoot a user's performance problem
- Use health weather maps and heat maps to monitor system health
- Discuss capacity planning models
- Monitor for capacity risk in the environment
- Troubleshoot risk issues
- Troubleshoot efficiency issues
- Identify ways to optimize resource use
- Use projects to perform what-if scenarios
- Create custom object groups in the environment
- Import and export content
- Create policies for various types of workloads

Introduction to vRealize Operations

- Describe how vRealize Operations is used to manage the software-defined data center

- Course objectives
- Describe the features and benefits of vRealize Operations
- Explain the importance of inventory trees
- View widgets and dashboards on the Home page
- View inventory trees and objects on the Environment page
- Create reports about the environment
- Explain how data is collected and analyzed by vRealize Operations
- List the functions of the analytics component
- Discuss key indicators in the user interface that provide warnings about potential problems
- Use alerts to identify root causes for performance, capacity, and utilization problems
- Use symptoms to indicate a potential problem
- Use badges to visually analyze your environment to identify good or bad conditions for the entire environment
- Troubleshoot system health alerts
- Troubleshoot a user's performance problem
- Use health weather maps and heat maps to monitor system health
- Discuss capacity planning models
- Monitor for capacity risk in the environment
- Troubleshoot risk issues
- Troubleshoot efficiency issues
- Identify ways to optimize resource use
- Use projects to perform what-if scenarios
- Create custom object groups in the environment
- Import and export content
- Create policies for various types of

problems
- Use symptoms to indicate a potential problem
- Use badges to visually analyze your environment to identify good or bad conditions for the entire environment
- Troubleshoot system health alerts
- Troubleshoot a user's performance problem
- Use health weather maps and heat maps to monitor system health
- Discuss capacity planning models
- Monitor for capacity risk in the environment
- Troubleshoot risk issues
- Troubleshoot efficiency issues
- Identify ways to optimize resource use
- Use projects to perform what-if scenarios
- Create custom object groups in the environment
- Import and export content
- Create policies for various types of workloads

- Course objectives
- Describe the features and benefits of vRealize Operations
- Explain the importance of inventory trees
- View widgets and dashboards on the Home page
- View inventory trees and objects on the Environment page
- Create reports about the environment
- Explain how data is collected and analyzed by vRealize Operations
- List the functions of the analytics component
- Discuss key indicators in the user interface that provide warnings about potential problems
- Use alerts to identify root causes for performance, capacity, and utilization problems
- Use symptoms to indicate a potential problem
- Use badges to visually analyze your environment to identify good or bad conditions for the entire environment
- Troubleshoot system health alerts
- Troubleshoot a user's performance problem
- Use health weather maps and heat maps to monitor system health
- Discuss capacity planning models
- Monitor for capacity risk in the environment
- Troubleshoot risk issues
- Troubleshoot efficiency issues
- Identify ways to optimize resource use
- Use projects to perform what-if scenarios
- Create custom object groups in the environment
- Import and export content
- Create policies for various types of

- Use symptoms to indicate a potential problem

- Discuss key indicators in the user interface that provide warnings about potential problems
- Use alerts to identify root causes for performance, capacity, and utilization problems
- Use symptoms to indicate a potential problem
- Use badges to visually analyze your environment to identify good or bad conditions for the entire environment
- Troubleshoot system health alerts
- Troubleshoot a user's performance problem

workloads

Troubleshooting System Health Issues

- Discuss the process for troubleshooting system health problems

- Course objectives
- Describe the features and benefits of vRealize Operations
- Explain the importance of inventory trees
- View widgets and dashboards on the Home page
- View inventory trees and objects on the Environment page
- Create reports about the environment
- Explain how data is collected and analyzed by vRealize Operations
- List the functions of the analytics component
- Discuss key indicators in the user interface that provide warnings about potential problems
- Use alerts to identify root causes for performance, capacity, and utilization problems
- Use symptoms to indicate a potential problem
- Use badges to visually analyze your environment to identify good or bad conditions for the entire environment
- Troubleshoot system health alerts
- Troubleshoot a user's performance problem
- Use health weather maps and heat maps to monitor system health
- Discuss capacity planning models
- Monitor for capacity risk in the environment
- Troubleshoot risk issues
- Troubleshoot efficiency issues
- Identify ways to optimize resource use
- Use projects to perform what-if scenarios
- Create custom object groups in the environment
- Import and export content
- Create policies for various types of workloads

- Course objectives
- Describe the features and benefits of vRealize Operations
- Explain the importance of inventory trees
- View widgets and dashboards on the Home page
- View inventory trees and objects on the Environment page
- Create reports about the environment
- Explain how data is collected and analyzed by vRealize Operations
- List the functions of the analytics component
- Discuss key indicators in the user interface that provide warnings about potential problems
- Use alerts to identify root causes for performance, capacity, and utilization problems
- Use symptoms to indicate a potential problem
- Use badges to visually analyze your environment to identify good or bad conditions for the entire environment
- Troubleshoot system health alerts
- Troubleshoot a user's performance problem

- Course objectives
- Describe the features and benefits of vRealize Operations
- Explain the importance of inventory trees
- View widgets and dashboards on the Home page
- View inventory trees and objects on the Environment page
- Create reports about the environment
- Explain how data is collected and analyzed by vRealize Operations
- List the functions of the analytics component

Policies

- List guidelines for customizing vRealize Operations

- Course objectives
- Describe the features and benefits of vRealize Operations
- Explain the importance of inventory trees
- View widgets and dashboards on the Home page
- View inventory trees and objects on the Environment page
- Create reports about the environment
- Explain how data is collected and analyzed by vRealize Operations

Capacity Planning

- Define capacity planning terminology

- Course objectives
- Describe the features and benefits of vRealize Operations
- Explain the importance of inventory trees
- View widgets and dashboards on the Home page
- View inventory trees and objects on the Environment page
- Create reports about the environment

- Create policies for various types of workloads

- Course objectives
- Describe the features and benefits of vRealize Operations
- Explain the importance of inventory trees
- View widgets and dashboards on the Home page
- View inventory trees and objects on the Environment page
- Create reports about the environment
- Explain how data is collected and analyzed by vRealize Operations
- List the functions of the analytics component
- Discuss key indicators in the user interface that provide warnings about potential problems
- Use alerts to identify root causes for performance, capacity, and utilization problems
- Use symptoms to indicate a potential problem
- Use badges to visually analyze your environment to identify good or bad conditions for the entire environment
- Troubleshoot system health alerts
- Troubleshoot a user's performance problem
- Use health weather maps and heat maps to monitor system health
- Discuss capacity planning models
- Monitor for capacity risk in the environment
- Troubleshoot risk issues
- Troubleshoot efficiency issues
- Identify ways to optimize resource use
- Use projects to perform what-if scenarios
- Create custom object groups in the environment
- Import and export content
- Create policies for various types of workloads

Explain how policy inheritance works

- Explain how data is collected and analyzed by vRealize Operations
- List the functions of the analytics component
- Discuss key indicators in the user interface that provide warnings about potential problems
- Use alerts to identify root causes for performance, capacity, and utilization problems
- Use symptoms to indicate a potential problem
- Use badges to visually analyze your environment to identify good or bad conditions for the entire environment
- Troubleshoot system health alerts
- Troubleshoot a user's performance problem
- Use health weather maps and heat maps to monitor system health
- Discuss capacity planning models
- Monitor for capacity risk in the environment
- Troubleshoot risk issues
- Troubleshoot efficiency issues
- Identify ways to optimize resource use
- Use projects to perform what-if scenarios
- Create custom object groups in the environment
- Import and export content
- Create policies for various types of workloads

- Course objectives
- Describe the features and benefits of vRealize Operations
- Explain the importance of inventory trees
- View widgets and dashboards on the Home page
- View inventory trees and objects on the Environment page
- Create reports about the environment
- Explain how data is collected and analyzed by vRealize Operations
- List the functions of the analytics component
- Discuss key indicators in the user interface that provide warnings about potential problems
- Use alerts to identify root causes for performance, capacity, and utilization problems
- Use symptoms to indicate a potential problem
- Use badges to visually analyze your environment to identify good or bad conditions for the entire environment
- Troubleshoot system health alerts
- Troubleshoot a user's performance problem
- Use health weather maps and heat maps to monitor system health
- Discuss capacity planning models
- Monitor for capacity risk in the

- environment
- Troubleshoot risk issues
- Troubleshoot efficiency issues
- Identify ways to optimize resource use
- Use projects to perform what-if scenarios
- Create custom object groups in the environment
- Import and export content
- Create policies for various types of workloads
