Developing and Deploying AI/ML Applications on Red Hat OpenShift AI with Exam (AI268)

Duration: 4 Days **Course Code: AI268**

Overview:

An introduction to developing and deploying AI/ML applications on Red Hat OpenShift AI.
Developing and Deploying AI/ML Applications on Red Hat OpenShift AI (AI267) provides students with the fundamental knowledge about using Red Hat OpenShift for developing and deploying AI/ML applications.
Organizations collect and store vast amounts of information from multiple sources. With Red Hat OpenShift AI, organizations have a platform ready to analyze data, visualize trends and patterns, and predict future business outcomes by using machine learning and artificial intelligence algorithms.
This course helps students build core skills for using Red Hat OpenShift AI to train, develop and deploy machine learning models through hands-on experience.
You will understand the foundations of the Red Hat OpenShift AI architecture. You will be able to install Red Hat OpenShift AI, manage resource allocations, update components and manage users and their permissions.
You will also be able to train, deploy and serve models, including how to use Red Hat OpenShift AI to apply best practices in machine learning and data science.
Finally you will be able to define and set up data science pipelines with Red Hat OpenShift AI.
This bundle (course + exam) is based on Red Hat OpenShift ® 4.16, and Red Hat OpenShift AI 2.13 and includes an exam voucher.
Note: *Starting January 2026 this bundle (Course + Exam) only exists in CR (classroom) if scheduled or Closed course modalities.*
If you are targeting a virtual class, please consider AI267LS the new RHLS-course subscription which includes as well an exam voucher.

Updated Jan2026

Target Audience:

Data scientists and AI practitioners who want to use Red Hat OpenShift AI to build and train ML models Developers who want to build and integrate AI/ML enabled applicationsMLOps engineers responsible for installing, configuring, deploying, and monitoring AI/ML applications on Red Hat OpenShift AI

Objectives:

- After this course participants should be able to:
- Understand the basis of Red Hat OpenShift AI
- Handle Data Science Projects
- Use Jupyter Notebooks
- Manage Red Hat OpenShift AI Installation
- Handle Users and Resources Management
- Custom Notebook Images
- Get an introduction to Machine Learning
- Use Training Models
- Enhance Model Training with RHOAI
- Get an introduction to Model Serving
- Use Model Serving in Red Hat OpenShift AI
- Get an introduction to Data Science Pipelines
- Work with Pipelines
- Control Pipelines and Experiments

Prerequisites:

- Experience with Git is required
- Experience in Python development is required, or completion of the Python Programming with Red Hat (AD141) course
- Experience in Red Hat OpenShift is required, or completion of the Red Hat OpenShift Developer II: Building and Deploying Cloud-native Applications (DO288) course
- Basic experience in the AI, data science, and machine learning

Testing and Certification

Red Hat Certified Specialist in OpenShift AI Exam (EX267) - exam voucher included

fields is recommended
Take Red Hat free assessment to gauge whether this offering is the best fit for your skills Red Hat Skills Assessment

Follow-on-Courses:

None

Content:

Introduction to Red Hat OpenShift AI

Identify the main features of Red Hat OpenShift AI, and describe the architecture and components of Red Hat AI.

Data Science Projects

Organize code and configuration by using data science projects, workbenches, and data connections

Jupyter Notebooks

Use Jupyter notebooks to execute and test code interactively

Installing Red Hat OpenShift AI

Installing Red Hat OpenShift AI by using the web console and the CLI, and managing Red Hat OpenShift AI components

Managing Users and Resources

Managing Red Hat OpenShift AI users, and resource allocation for Workbenches

Custom Notebook Images

Creating custom notebook images, and importing a custom notebook through the Red Hat OpenShift AI dashboard

Introduction to Machine Learning

Describe basic machine learning concepts, different types of machine learning, and machine learning workflows

Training Models

Train models by using default and custom workbenches

Enhancing Model Training with RHOAI

Use RHOAI to apply best practices in machine learning and data science

Introduction to Model Serving

Describe the concepts and components required to export, share and serve trained machine learning modelsI

Model Serving in Red Hat OpenShift AI

Serve trained machine learning models with OpenShift AI

Custom Model Servers

Deploy and serve machine learning models by using custom model serving runtimes

Introduction to Data Science Pipelines

Create, run, manage, and troubleshoot data science pipelines

Elyra Pipelines

Creating a Data Science Pipeline with Elyra

KubeFlow Pipelines

Creating a Data Science Pipeline with KubeFlow SDK

Additional Information:

Official course book provided to participants
