

Advanced Junos Security

Duration: 5 Days Course Code: AJSEC Version: 20.1R **Delivery Method: Virtual Learning**

Overview:

This four-day course, which is designed to build off the current Juniper Security (JSEC) offering, delves deeper into Junos security, next-generation security features, and ATP supporting software. Through demonstrations and hands-on labs, you will gain experience in configuring and monitoring the advanced Junos OS security features with advanced coverage of advanced logging and reporting, next generation Layer 2 security, next generation advanced anti-malware with Juniper ATP On-Prem and SecIntel. This course uses Juniper Networks SRX Series Services Gateways for the hands-on component. This course is based on Junos OS Release 20.1R1.11, Junos Space Security Director 19.4, Juniper ATP On-Prem version 5.0.7.

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Target Audience:

This course benefits individuals responsible for implementing, monitoring, and troubleshooting Juniper security components.

Objectives:

- Demonstrate understanding of concepts covered in the prerequisite Juniper Security courses.
- Describe the various forms of security supported by the Junos OS.
- Describe the Juniper Connected Security model.
- Describe Junos security handling at Layer 2 versus Layer 3.
- Implement next generation Layer 2 security features.
- Demonstrate understanding of Logical Systems (LSYS).
- Demonstrate understanding of Tenant Systems (TSYS).
- Implement virtual routing instances in a security setting.
- Describe and configure route sharing between routing instances using logical tunnel interfaces.
- Describe and discuss Juniper ATP and its function in the network.
- Describe and implement Juniper Connected Security with Policy Enforcer in a network.
- Describe firewall filters use on a security device.
- Implement firewall filters to route traffic.
- Explain how to troubleshoot zone problems.
- Describe the tools available to troubleshoot SRX Series devices.

- Describe and implement IPsec VPN in a hub-and-spoke model.
- Describe the PKI infrastructure.
- Implement certificates to build an ADVPN network.
- Describe using NAT, CoS and routing protocols over IPsec VPNs.
- Implement NAT and routing protocols over an IPsec VPN.
- Describe the logs and troubleshooting methodologies to fix IPsec
- Implement working IPsec VPNs when given configuration that are
- Describe Incident Reporting with Juniper ATP On-Prem device.
- Configure mitigation response to prevent spread of malware.
- Explain SecIntel uses and when to use them.
- Describe the systems that work with SecIntel.
- Describe and implement advanced NAT options on the SRX Series devices.
- Explain DNS doctoring and when to use it.

training@globalknowledge.com.eg

Describe NAT troubleshooting logs and techniques.

Prerequisites:

- Strong level of TCP/IP networking and security knowledge
 Complete the Juniper Security (JSEC) course prior to attending this class
- IJSEC Introduction to Junos Security

 JSEC Junos Security

Content:

6 Advanced NAT Day 4 Day 1 Configuring Persistent NAT 1 COURSE INTRODUCTION Demonstrate DNS Doctoring 11 Juniper Connected Security Configure IPv6 NAT Operations Troubleshooting NAT Security Models 2 Junos Layer 2 Packet Handling and Security ■ Enforcement on Every Network Device Features LAB: 5: Implementing Advanced NAT Features 12 SecIntel Transparent Mode Security Security Feed Secure Wire Layer 2 Next Generation Ethernet Switching 7 Logical and Tenant Systems Encrypted Traffic Analysis MACsec Use Cases for SecIntel Overview LAB 1: Implementing Layer 2 Security Administrative Roles LAB 10: Implementing SecIntel ■ Differences Between LSYS and TSYS Configuring LSYS 3 Firewall Filters 13 Advanced Juniper ATP On-Prem Configuring TSYS Using Firewall Filters to Troubleshoot Collectors LAB 6: Implementing TSYS Routing Instances Private Mode Filter-Based Forwarding Incident Response Day 3 Deployment Models LAB 2: Implementing Firewall Filters LAB 11: Implementing Advanced ATP 8 PKI and ADVPNs On-Prem 4 Troubleshooting Zones and Policies PKI Overview General Troubleshooting for Junos Devices ■ PKI Configuration 14 Automated Threat Mitigation Troubleshooting Tools ADVPN Overview ■ Troubleshooting Zones and Policies ADVPN Configuration and Monitoring Identify and Mitigate Malware Threats Zone and Policy Case Studies Automate Security Mitigation LAB 7: Implementing ADVPNs LAB 3: Troubleshooting Zones and Policies LAB 12: Identifying and Mitigating Threats 9 Advanced IPsec Day 2 A Group VPNs NAT with IPsec Class of Service with IPsec Overview 5 Hub-and-Spoke VPN Best Practices Implementing Group VPNs Routing OSPF over VPNs Overview LAB 8: Implementing Advanced IPsec Configuration and Monitoring Solutions LAB 4: Implementing Hub-and-Spoke VPNs 10 Troubleshooting IPsec ■ IPsec Troubleshooting Overview Troubleshooting IKE Phase 1 and 2 ■ IPsec Logging

LAB 9: Troubleshooting IPsec
