

AIX Jumpstart for UNIX Professionals

Duration: 5 Days Course Code: AN14G

Overview:

Provide focused training for experienced UNIX administrators on how to install, customize and administer the AIX operating system in a multiuser POWER (System p) partitioned environment. The course is based on AIX 6.1 running on a Power system managed by Hardware Management Console version 7 and provides practical discussions that are appropriate to earlier AIX releases. Learn to install, customize and administer the AIX operating system in a multi-user POWER (System p) partitioned environment. The course is based on AIX 6.1 running on a Power system managed by Hardware Management Console version 7 and provides practical discussions that are appropriate to earlier AIX releases.

Target Audience:

This intermediate course is appropriate for experienced UNIX system administrators who want to support AIX running on POWER processor based systems in a multi-user POWER (System p) partitioned environment.

Objectives:

- Install the AIX operating system, filesets, and RedHat Package Manager (RPM) packages
- Perform logical volume and file system management
- Perform system startup and shutdown
- Perform and restore system backups
- Discuss and use system management tools such as System Management Interface Tool (SMIT) and IBM systems director console for AIX
- Use the AIX error log as a tool in problem determination
- Manage physical and logical devices
- Configure TCP/IP networking
- Discuss the purpose of the logical volume manager

Prerequisites:

Students should be able to use basic UNIX commands including:

- Execute basic AIX commands
- Manage files and directories
- Use the vi editor
- Use redirection, pipes, and tees
- Use the utilities find and grep
- Use command and variable substitution
- Set and change Korn shell variables
- Write simple shell scripts

These skills can be acquired by attending AIX Basics (AU13) or through equivalent AIX/UNIX knowledge.

Students should also have experience administering a UNIX operating system (such as Solaris, HP/UX, and others) including:

- User management and system security
 - Storage
 - Networking
 - System shutdown and restart
 - Backup and recovery
 - System task scheduling
-
