

EXIN BCS Practitioner Certificate in Requirements Engineering – Including Exam

Duration: 3 Days Course Code: BCS-RE Delivery Method: Virtual Learning

Overview:

This 3-day BCS Requirements Engineering Practice training + exam covers the range of concepts, approaches and techniques that are applicable to the Practitioner Certificate in Requirements Engineering. It is relevant to anyone working within a business or information systems domain, who requires an understanding of the nature, definition and use of good quality requirements.

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Target Audience:

This Practitioner Certificate is designed for people who want to elicit, analyse, validate, document and manage requirements Suitable for business analysts, business managers and members of their team, business change managers and project managers

Objectives:

- You'll learn how to take a systematic approach to eliciting, analysing, validating, documenting and managing requirements. The certificate includes:
 - An introduction to the requirements engineering process
 - The hierarchy of requirements
 - How to identify stakeholders in the requirements process
 - How to elicit requirements
 - Modelling, designing and analysing requirements
 - Requirements management
-

Testing and Certification

- Type: Multiple choice
 - Duration: 60 minutes
 - Supervised: Yes
 - Open Book: No
 - Pass Mark: 25/40
 - Calculators: Calculators cannot be used during this examination.
-

Content:

1. Introduction to Requirements Engineering 5%	4.3.11 Activity sampling.	6.3.13 Related requirements.
Candidates will be able to:	4.4 Describe the principles and application of the elicitation techniques (listed in 4.3).	6.3.14 Related documents.
1.1 Define the term 'requirements' and the characteristics of a requirement.	4.5 List the advantages and disadvantages of the elicitation techniques (listed in 4.3).	6.3.15 Comments.
1.2 Explain the rationale for Requirements Engineering and the application of the	4.6 Discuss the suitability of the elicitation techniques (listed in 4.3) for Agile and linear	6.3.16 Rationale.
Requirements Engineering framework.	development approaches.	6.3.17 Resolution.
1.3 Explain the rationale of requirements planning and estimating.	5 Use of Models in Requirements Engineering 10%	6.3.18 Version history.
1.4 Describe the elements that should be considered as the contents of a project	Candidates will be able to:	6.4 Describe the structure and contents of the requirements document:
initiation document, terms of reference or project charter:	5.1 Explain the rationale for modelling the functional requirements (processing and data)	6.4.1 Introduction and background.
1.4.1 Business objectives.	of an information system and describe how models help the analyst to:	6.4.2 Business process models.
1.4.2 Project objectives.	5.1.1 Generate questions in order to clarify a requirement and remove ambiguity.	6.4.3 Function model (use case diagram) of defined requirements.
1.4.3 Scope.	5.1.2 Define business rules.	6.4.4 Data model (class model) of defined requirements.
1.4.4 Constraints (budget, timescale, standards).	5.1.3 Cross-check requirements for consistency and completeness.	6.4.5 Requirements (defined using the selected documentation style).
1.4.5 Authority or sponsor.	5.2 Interpret a given scenario to develop a context diagram.	6.4.6 Glossary.
1.4.6 Resources.	5.3 Interpret a given scenario to identify the different types of event that can initiate	7 Requirements Analysis 20%
1.4.7 Assumptions.	processing (external, time based, internal).	Candidates will be able to:
2 Hierarchy of Requirements 10%	5.4 Understand how to construct a UML use case diagram for a given scenario to	7.1 Explain the rationale for prioritising requirements, using the MoSCoW prioritisation
Candidates will be able to:	represent the functional requirements for an information system, including the	technique.
2.1 Show understanding of the rationale for the requirements hierarchy and describe how		7.2 Interpret a given scenario and apply the MoSCoW prioritisation technique.
it is applied in Requirements Engineering.		7.3 Examine individual requirements; apply filters and quality criteria to assess that they

	following notational elements:	
2.2 Explain the categories within the hierarchy:	5.4.1 System boundary.	are well defined.
2.2.1 Business policy (general) requirements.	5.4.2 Actors (user role, another system and time).	7.4 Use requirements for a given scenario to check for technical, business and financial
2.2.2 Technical policy requirements.	5.4.3 Use cases.	feasibility.
2.2.3 Functional requirements.	5.4.4 Communication relationships (associations) between actors and use cases.	7.5 Assign a requirement type to an individual requirement.
2.2.4 Non-functional requirements.		
3 Stakeholders in the Requirements Process 5%	- It should be noted that there is no requirement to understand include and extend	7.6 Organise the requirements for a given scenario by requirement type and functional
Candidates will be able to:	constructs.	area.
3.1 Define the term stakeholder.	5.5 Interpret a UML Class diagram (comprising of classes, attributes, associations and	7.7 Within a given requirement set:
3.2 Explain the key roles of the following project stakeholders during Requirements Engineering:	multiplicities) that represents the data requirements for a given scenario, and	7.7.1 Identify and resolve duplicate requirements.
3.2.1 Project Manager.	describe the business rules that are represented.	7.7.2 Identify and reconcile overlapping requirements.
3.2.2 Developer.	- It should be noted that there is no requirement to understand operations,	7.7.3 Identify conflicting requirements and explain how requirements negotiation
3.2.3 Tester.	association classes, generalisation (and associated concepts of inheritance and	could be applied to resolve these conflicts.
3.2.4 Solution Architect.	polymorphism), aggregation and composition.	7.7.4 Identify ambiguous requirements and aspects to be defined to remove
3.3 Explain the key roles of the following business stakeholders during Requirements Engineering:	5.6 Explain the benefits to be derived from cross-referencing models and illustrate how	7.8 Explain the use of prototyping to elaborate requirements.
3.3.1 Project Sponsor.	this can be achieved by using a CRUD matrix (of function or event against data).	8 Requirements Validation 5%
3.3.2 Subject Matter Expert.	6 Requirements Documentation 15%	Candidates will be able to:
3.3.3 End User.	Candidates will be able to:	8.1 Describe the rationale for the following approaches to requirements validation:
3.3.4 Business Manager.	6.1 Explain the rationale for creating a requirements document and for documenting	8.1.1 Informal reviews.

3.4 Interpret a given scenario, identify stakeholders and describe their contribution to Requirements Engineering.	requirements at different levels of definition, relating to:	8.1.2 Formal reviews:
4 Requirements Elicitation 20%	6.1.1 The nature of the solution.	8.1.2.1 Structured walkthrough.
Candidates will be able to:	6.1.2 The level of priority.	8.1.2.2 Prototype reviews.
4.1 Explain different knowledge types:	6.1.3 The delivery approach.	8.2 Explain the steps to be followed in the validation process for requirements artefacts:
4.1.1 Tacit / Non-tacit (explicit).	6.2 Understand how to construct requirements documentation for a given scenario, using	8.2.1 Plan review.
4.1.2 Individual / Corporate.	the following specified styles:	8.2.2 Conduct review of artefacts.
4.2 Interpret a given scenario to identify different knowledge types.	6.2.1 User story.	8.2.3 Collect comments.
4.3 Interpret a given scenario to identify relevant elicitation techniques from the following	6.2.2 Use case.	8.2.4 Undertake actions.
list:	6.2.3 Requirements list.	8.2.5 Revise artefacts.
4.3.1 Interviews.	6.2.4 Requirements catalogue.	8.2.6 Obtain approval.
4.3.2 Workshops.	6.3 Describe a requirement in terms of its characteristics or attributes and explain why	9 Requirements Management 10%
4.3.3 Observation.	each of the following may be needed:	Candidates will be able to:
4.3.4 Focus groups.	6.3.1 Identifier.	9.1 Explain the rationale for requirements management.
4.3.5 Prototyping.	6.3.2 Name.	9.2 Define the elements of requirements management and the links between them.
4.3.6 Scenario analysis.	6.3.3 Description.	9.3 Explain the structure and elements of a change control process.
4.3.7 Document analysis.	6.3.4 Source.	9.4 Explain the structure and elements of version control.
4.3.8 Surveys.	6.3.5 Owner.	9.5 Define two forms of traceability and how projects benefit from each of them:
4.3.9 Record searching.	6.3.6 Author.	9.5.1 Horizontal (forwards from origin to delivery and backwards from delivery to origin).
4.3.10 Special purpose records.	6.3.7 Type (general, technical, functional, non-functional).	9.5.2 Vertical (to business objectives).
	6.3.8 Priority.	

6.3.9 Business area.

6.3.10 Stakeholders.

6.3.11 Associated non-functional requirements.

6.3.12 Acceptance criteria.

9.6 Explain the rationale and the approach to achieving requirements traceability..
