IMS Database Application Programming

Duration: 3 Days   Course Code: CM17G

Overview:

Learn how to write application programs that use Data Language One (DL/I) to process Information Management System (IMS) databases.

Target Audience:

This is an intermediate course for individuals who write programs in Common Business Oriented Language (COBOL), or Programming Language One (PL/I), or Assembler language using DL/I to navigate through an process IMS databases.

Objectives:

- Describe the basic differences between files and IMS databases as they relate to application program coding and logic

- Describe the terms and processing characteristics of IMS hierarchic data structures

- Construct DL/I calls for either COBOL or PL/I language programs

- Write, test and debug a batch application program that uses the DL/I call functions

- Use the IMS Test Program to prototype application program calls, and to perform ad-hoc read and update access to an IMS database

- Describe the applications and uses of other DL/I features

- Program for recovery and restart using DL/I calls to establish synchronization points

- Describe the functions provided by High Availability Large Database (HALDB), and any program differences when accessing a Full Function database or a HALDB

Prerequisites:

You should complete:

- IMS Fundamentals (CM010) or IMS Fundamentals - Web - ILO(CMW01)
and a COBOL or PL/I language course, or be able to:

- List the basic components of the IMS database system
- Construct a non-DL/I application program in COBOL or PL/I
