## Advanced Developing on AWS (EN)

**Duration: 3 Days**    **Course Code: GK4505**

---

### Overview:

The Advanced Developing on AWS course uses the real-world scenario of taking a legacy, on-premises monolithic application and refactoring it into a serverless microservices architecture. This three-day advanced course covers advanced development topics such as architecting for a cloud-native environment; deconstructing on-premises, legacy applications and repackaging them into cloud-based, cloud-native architectures; and applying the tenets of the Twelve-Factor Application methodology.

---

### Target Audience:

This course is intended for: Experienced software developers who are already familiar with AWS services

---

### Objectives:

- In this course, you will learn how to:
  - Analyze a monolithic application architecture to determine logical or programmatic break points where the application can be broken up across different AWS services.
  - Apply Twelve-Factor Application manifesto concepts and steps while migrating from a monolithic architecture.
  - Recommend the appropriate AWS services to develop a microservices based cloud native application.
  - Use the AWS API, CLI, and SDKs to monitor and manage AWS services.
  - Migrate a monolithic application to a microservices application using the 6 Rs of migration.
  - Explain the SysOps and DevOps interdependencies necessary to deploy a microservices application in AWS.
- 

### Prerequisites:

We recommend that attendees of this course have the following prerequisites:

- In-depth knowledge of at least one high-level programming language
  - Working knowledge of core AWS services and public cloud implementation
  - Completion of the Developing on AWS course (GK4504), and then a minimum of 6 months of application of those concepts in a real world environment.
-
