

Information Security Foundation

Duration: 2 Days **Course Code: S-ISF**

Overview:

The Information Security Foundation (ISF) course provides you with a comprehensive introduction to information security management. The course covers a wide range of topics, from fundamental security concepts and terminology to effective information security controls. During the course, you will familiarise yourself with ISO 27001, the most widely used information security standard that provides requirements for implementing and continually improving an information security management system (ISMS). You will understand what focus areas information security needs to address to ensure appropriate protection against information security threats. With the help of ISO 27001 and its supporting code of practice, ISO 27002, you will gain insight into commonly accepted information security controls. At the end of the course, you will communicate with confidence about information security topics. You will have a good understanding of information security risks, and you will be able to link them with best-practice physical, organisational and technical information security measures. ISF gives you a solid grounding in information security management principles. The knowledge you build up in this course enables you to follow our Practitioner training and try your hand at complex implementation tasks, such as performing an information security risk assessment and designing an information security awareness program. **Learn how to use ISO 27001 and 27002 to build an information security management system (ISMS); Get an in-depth overview of information security threats and controls with insights from real-world security experts; Prepare for your certification assessment with a free sample exam.**

Target Audience:

The Information Security Foundation certification (S-ISF) is suitable for anyone in charge of handling information in any capacity. This certification is also suitable for entrepreneurs in small and medium enterprises who need to possess a basic knowledge of information security. This certification is an ideal start for new information security professionals. Should you want to specialize further, you can attain the next levels of certification: S-ISP Information Security Practitioner S-ISME Information Security Management Expert Training and certification for each of these certifications is available through Global Knowledge.

Objectives:

- The Information Security Foundation certification (S-ISF) equips you with the knowledge and skills you need to lay the foundations of your security education and career.
 - Understand the importance of effective information security governance;
 - By passing the ISF certification exam and earning a SECO-Information Security Foundation (S-ISF) certificate, you demonstrate your ability to
 - Understand information security roles and responsibilities;
 - Adopt a holistic approach to information security;
