

## Implementing Cisco Service Provider Advanced Routing Solutions

**Duration: 5 Days**    **Course Code: SPRI**    **Version: 1.1**    **Delivery Method: Company Event**

### Overview:

The Implementing Cisco Service Provider Advanced Routing Solutions (SPRI) course expands a student's knowledge and skills in service provider core networking. You will cover the theories and practical knowledge of advanced routing technologies including routing protocols, policy language, Multiprotocol Label Switching (MPLS), and segment routing.

**This course is worth 40 Continuing Education (CE) Credits.**

#### Company Events

These events can be delivered exclusively for your company at our locations or yours, specifically for your delegates and your needs. The Company Events can be tailored or standard course deliveries.

### Target Audience:

Engineers who maintain and operate advanced Service Provider core networks.

### Objectives:

- After completing this course you should be able to:**
- Implement advanced features of multiarea Open Shortest Path First (OSPFv2) running in Service Provider networks
  - Implement advanced features of multilevel Intermediate System to Intermediate System (ISIS) running in Service Provider networks
  - Describe the main characteristics of routing protocols that are used in service provider environments
  - Configure route redistribution
  - Configure Border Gateway Protocol (BGP) in order to successfully connect the Service Provider network to the customer or upstream Service Provider
  - Configure BGP scalability in Service Provider networks
  - Implement BGP security options
  - Implement advanced features in order to improve convergence in BGP networks
  - Troubleshoot OSPF, ISIS, and BGP
  - Implement and verify MPLS
  - Implement and troubleshoot MPLS Traffic engineering
  - Implement and verify segment routing technology within an interior gateway protocol
  - Describe how traffic engineering is used in segment routing networks
  - Implement IPv6 tunneling mechanisms
  - Describe and compare core multicast concepts
  - Implement and verify the PIM-SM protocol
  - Implement enhanced Protocol-Independent Multicast - Sparse Mode (PIM-SM) features
  - Implement Multicast Source Discovery Protocol (MSDP) in the interdomain environment
  - Implement mechanisms for dynamic Rendezvous Point (RP) distribution

### Prerequisites:

**Attendees should meet the following prerequisites:**

- Intermediate to advanced knowledge of Cisco Internetwork Operating System (Cisco IOS®) or IOS XE and Cisco IOS XR Software configuration

### Testing and Certification

**Recommended as preparation for the following exams:**

- **300-510** - Implementing Cisco Service Provider Advanced Routing Solutions (SPRI) exam
- Passing the **300-510** SPRI exam earns you the Cisco Certified

- Knowledge of IPv4 and IPv6 TCP/IP networking
- Intermediate knowledge of BGP, OSPF, and ISIS routing protocols
- Understanding of MPLS technologies
- Understanding of multicast technologies
- Familiarity with segment routing
- SPCOR - Implementing and Operating Cisco Service Provider Network Core Technologies
- SPFNDU - Understanding Cisco Service Provider Network Foundations

Specialist - Service Provider Advanced Routing Implementation certification, and satisfies the concentration exam requirement for the [CCNP Service Provider](#) certification.

## Content:

Implementing and Verifying Open Shortest Path First Multiarea Networks	Improving BGP Convergence and Implementing Advanced Operations	Implementing IP Multicast Concepts and Technologies
Implementing and Verifying Intermediate System to Intermediate System Multilevel Networks	Troubleshooting Routing Protocols	Implementing PIM-SM Protocol
Introducing Routing Protocol Tools, Route Maps, and Routing Policy Language	Implementing and Verifying MPLS	Implementing PIM-SM Enhancements
Implementing Route Redistribution	Implementing Cisco MPLS Traffic Engineering	Implementing Interdomain IP Multicast
Influencing Border Gateway Protocol Route Selection	Implementing Segment Routing	Implementing Distributed Rendezvous Point Solution in Multicast Network
Scaling BGP in Service Provider Networks	Describing Segment Routing Traffic Engineering (SR TE)	Labs
Securing BGP in Service Provider Networks	Deploying IPv6 Tunneling Mechanisms	<ul style="list-style-type: none"> <li>■ Implement OSPF Special Area Types (IPv4 and IPv6)</li> <li>■ Implement Multiarea IS-IS</li> <li>■ Implement Route Redistribution</li> <li>■ Influence BGP Route Selection</li> <li>■ Implement BGP Route Reflectors</li> <li>■ Implement BGP Security Options</li> <li>■ Troubleshoot Routing Protocols</li> <li>■ Implement MPLS in the Service Provider Core</li> <li>■ Implement Cisco MPLS TE</li> <li>■ Configure and Verify Interior Gateway Protocol (IGP) Segment Routing</li> <li>■ Implement Tunnels for IPv6</li> <li>■ Enable and Optimize PIM-SM</li> <li>■ Implement PIM-SM Enhancements</li> <li>■ Implement Rendezvous Point Distribution</li> </ul>
