Developing Event-Driven Applications with Apache Kafka and Red Hat AMQ Streams with exam (AD483)

Duración: 4 Días   Código del Curso: AD483   Método de Impartición: Curso Cerrado (In-Company)

Temario:

Develop, scale, and troubleshoot event-driven microservice applications.
Learn to use Kafka and AMQ Streams to design, develop, and test event-driven applications. Event-driven microservices scale globally, store and stream process data, and provide low-latency feedback to customers.
With event-driven applications using Kafka and AMQ Streams, organizations can expect to be able to globally scale their applications, store and stream process data, and provide feedback to customers with extremely low latency.
Students will understand the architecture of Kafka and AMQ Streams and will be able to identify proper use cases for event-driven applications. In addition to learning the fundamental principles and features of Kafka and AMQ Streams, Students will learn how to design, develop, and test event-driven applications.
This bundle (course + exam) is for application developers and is based on Red Hat AMQ Streams 1.8 and Red Hat OpenShift Container Platform 4.6. It includes an exam voucher with a free retake.
Note : *Starting January 2026 this bundle (Course + Exam) only exists in CR (classroom) if scheduled or Closed course modalities.*
If you are targeting a virtual class, please consider AD482LS the new RHLS-course subscription which includes an exam voucher.

Updated Jan2026

Curso Cerrado (In-Company)

Debido a que nuestra formación es modular, nuestros responsables de formación e instructores pueden trabajar con usted y su equipo para detectar las necesidades formativas y adaptar un temario de forma rápida y rentable. Durante una formación cerrada, usted recibirá una formación de expertos en un curriculum adaptado a sus necesidades.

Dirigido a:

Application developers with microservice development experience.

Objetivos:

- After this course participants should be able to:

- Describe the basics of Kafka and its architecture.

- Develop applications with the Kafka Streams API.

- Integrate applications with Kafka Connect.

- Capture data change with Debezium.

- Troubleshoot common application streaming issues.

Prerequisitos:

- Experience with microservice application development and design, such as Red Hat Cloud-native Microservices Development with Quarkus (DO378) or equivalent experience.
- OpenShift experience is recommended, but not required.
Take Red Hat free assessment to gauge whether this offering is the best fit for your skills Red Hat Skills Assessment

Exámenes y certificación

- Red Hat Certified Specialist in Event-Driven Application Development exam (EX482) - exam voucher included

Siguientes cursos recomendados:

None

Contenido:

Designing Event-Driven Applications	Building Applications with the Streams API	Integrating Data Systems with Kafka Connect
Describe the principles of event-driven applications.	Leverage the Streams API to create data streaming applications.	Connect data systems and react to data changes using Kafka Connect and Debezium.
Introducing Kafka and AMQ Streams Concepts	Creating Asynchronous Services with Event Collaboration	Troubleshooting AMQ Streams Applications
Build applications with basic read-and-write messaging capabilities.	Create and migrate to asynchronous services using the event collaboration pattern.	Handle common problems in Kafka and AMQ Streams applications.

Información Adicional:

Official course book provided to participants
