

Red Hat OpenShift Administration III: Scaling Deployments in the Enterprise

Duración: 4 Días Código del Curso: DO380 Método de Impartición: Curso Remoto (Virtual)

Temario:

Plan, implement, and manage OpenShift clusters at scale

Red Hat OpenShift Administration III: Scaling Kubernetes Deployments in the Enterprise (DO380) expands upon the skills required to plan, implement, and manage OpenShift® clusters in the enterprise. You will learn how to configure and manage OpenShift clusters at scale to address increasing and special demands from applications and ensure reliability, performance, and availability. This course builds upon the essential skills required to configure and manage an OpenShift 4.x cluster, teaching the enhanced skills needed to operate production environments at scale.

This course is based on Red Hat® OpenShift Container Platform 4.14.

Note : Starting January 1, 2026, Red Hat introduces RHLS-Course — a flexible subscription model now included with this catalog offering. This replaces the previous direct virtual class enrollment from Global Knowledge.

When you purchase this item, you'll receive an RHLS subscription at the course level, giving you the freedom to choose the schedule that works best and self-enroll in your selected class.

Your RHLS subscription includes:

- One live, instructor-led virtual session
- 12 months of self-paced learning access
- One certification exam with a free retake

Onsite Classroom-based sessions and closed course options remain unchanged.

Updated Jan2026

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Dirigido a:

Primary: Platform Engineers, System Administrators, Cloud Administrators, and other infrastructure-related IT roles who are responsible for implementing and managing infrastructure for applications. Secondary: Enterprise Architects, Site Reliability Engineers (SRE), DevOps Engineers, and other application-related IT roles who are responsible for designing infrastructure for applications.

Objetivos:

- After this course participants should be able to:
- Manage OpenShift cluster operators and add operators.
- Implement GitOps workflows using OpenShift GitOps operator.
- Integrate OpenShift with enterprise authentication.
- Query and visualize cluster-wide logs, metrics, and alerts.
- Backup and restore application settings and data with OpenShift APIs for Data Protection (OADP).
- Manage machine pools and machine configurations.

Prerrequisitos:

This course is an advanced course so prerequisite knowledge is required

- Complete Red Hat OpenShift Administration II: Operating a Production Kubernetes Cluster(DO280) and become a Red Hat Certified Specialist in OpenShift Administration or equivalent practice knowledge
- Complete Red Hat System Administration II (RH134) and become a Red Hat Certified System Administrator or equivalent practice knowledge.

Exámenes y certificación

- Red Hat Certified Specialist in OpenShift Automation and Integration (EX380)

Recommended, but not required:

- Become a Red Hat Certified Systems Engineer or a Red Hat Certified Specialist in Ansible Automation.
- Basic knowledge about writing and running Ansible playbooks is desired.

Take Red Hat free assessment to gauge whether this offering is the best fit for your skills [Red Hat Skills Assessment](#)

Siguientes cursos recomendados:

- Red Hat OpenShift Installation Lab (DO322)
- Multicluster Management with Red Hat OpenShift Platform Plus (DO480)
- Enterprise Kubernetes Storage with Red Hat OpenShift Data Foundation (DO370)
- Managing Virtual Machines with Red Hat OpenShift Virtualization (DO316)

Contenido:

Authentication and Identity Management

- Configure OpenShift clusters to authenticate by using LDAP and OIDC enterprise identity systems and to recognize groups that those systems define.

Backup, Restore, and Migration of Applications with OADP

- Backup and restore application settings and data with OpenShift APIs for Data Protection (OADP).

Cluster Partitioning

- Configure a subset of cluster nodes to be dedicated to a type of workload.

Pod Scheduling

- Configure workloads to run on a dedicated set of cluster nodes and prevent other workloads from using those cluster nodes.

OpenShift GitOps

- Deploy OpenShift GitOps for managing clusters and applications.

OpenShift Monitoring

- Troubleshoot performance and availability issues with applications and clusters.

OpenShift Logging

- Deploy OpenShift logging and query log entries from workloads and cluster nodes.

Información Adicional:

Official course book provided to participants.
