

## Architecting with Google Cloud: Design and Process

**Duración: 2 Días**    **Código del Curso: GO5974**    **Método de Impartición: Curso Cerrado (In-Company)**

### Temario:

**Use Google Cloud to create new solutions or to integrate existing systems, application environments, and infrastructure.**

This course features a combination of lectures, design activities, and hands-on labs to show you how to use proven design patterns on Google Cloud to build highly reliable and efficient solutions and operate deployments that are highly available and cost-effective.

This course was created for those who have already completed the Architecting with Google Compute Engine or Architecting with Google Kubernetes Engine course.

*Updated 6/3/2026*

### Curso Cerrado (In-Company)

Debido a que nuestra formación es modular, nuestros responsables de formación e instructores pueden trabajar con usted y su equipo para detectar las necesidades formativas y adaptar un temario de forma rápida y rentable. Durante una formación cerrada, usted recibirá una formación de expertos en un curriculum adaptado a sus necesidades.

### Dirigido a:

This course is recommended to anyone looking to create new solutions or to integrate existing systems, application environments, and infrastructure with Google Cloud:

- Cloud solutions architects
- Systems operations professionals
- DevOps engineers
- IT managers

### Objetivos:

- **After this course participants should be able to:**
- Apply a tool set of questions, techniques and design considerations.
- Define application requirements and express them objectively as KPIs, SLOs and SLIs.
- Decompose application requirements to find the right microservice boundaries.
- Leverage Google Cloud developer tools to set up modern, automated deployment pipelines.
- Choose the appropriate Google Cloud Storage services based on application requirements.
- Discuss Google Cloud network architectures, including hybrid architectures.
- Implement reliable, scalable, resilient applications balancing key performance metrics with cost.
- Choose the right Google Cloud deployment services for your applications.
- Secure cloud applications, data and infrastructure.
- Monitor service level objectives and costs using Cloud Monitoring.

### Prerequisites:

- Have completed Architecting with Google Compute Engine (GO5973), Architecting with Google Kubernetes Engine (GO6594), or have equivalent experience.
- Have basic proficiency with command-line tools and Linux operating system environments.
- Have systems operations experience, including deploying and

### Exámenes y certificación

This course is part of the Learning Paths towards Associate Cloud Engineer and Professional Cloud Architect certification.

## Siguientes cursos recomendados:

Depends on the profile of the participants.

## Contenido:

### Module 1: Defining the expected Service

- Describe users in terms of roles and personas.
- Evaluate KPIs using SLOs and SLIs.
- Determine the quality of application requirements using SMART criteria.

### Module 2: Microservices design and architecture

- Decompose monolithic applications into microservices.
- Recognize appropriate microservice boundaries.
- Design consistent, standard RESTful service APIs.
- Identify the 12-factor best practices for implementing services.

### Module 3: DevOps Automation

- Discuss the automation of service deployment using CI/CD pipelines.
- Explain how to leverage Cloud Source Repositories for source and version control.
- Automate builds with Cloud Build and build triggers.
- Manage container images with Container Registry.

### Module 4: Choosing Storage solutions

- Identify the use cases for :
  - Spanner.
  - Cloud SQL.
  - Firestore.
  - Memorystore.

### Module 5: Google Cloud and hybrid network architecture

- Discuss the design of VPC networks to optimize for cost, security, and performance.
- Describe how global and regional load balancers provide access to services.
- Connect networks using peering and VPNs.
- Define hybrid networks between Google Cloud and on-premises data centers using Cloud Interconnect.

### Module 6: Deploying applications to Google Cloud

- Choose the appropriate Google Cloud deployment service for your applications.
- Configure scalable, resilient infrastructure using Instance Templates and Groups.
- Orchestrate microservice deployments using Kubernetes and GKE.
- Leverage App Engine for a completely automated platform as a service (PaaS).

### Module 7: Designing reliable systems

- Discuss the design of services to meet requirements for availability, durability, and scalability.
- Identify the failures to be avoided to implement a fault-tolerant system.

### Module 8: Security

- Identify the best practices for designing secure systems.
- Discuss the use of organizational policies and folders to simplify cloud governance.
- Identify Google Cloud services that can be leveraged for access management.
- Identify Google Cloud services that can be leveraged to mitigate DDoS attacks.

### Module 9: Maintenance and Monitoring

- Discuss different ways to manage new service versions.
- Describe how to forecast, monitor, and optimize service costs.
- Observe if your services are meeting their SLOs using Cloud Monitoring and Dashboards.
- Use Uptime Checks to determine service availability.

Respond to service outages using Cloud Monitoring Alerts.

## Información Adicional:

Official course book provided to participants.
