Security in Google Cloud

Duración: 3 Días **Código del Curso: GO5977** **Version: 2.1.1**

Temario:

This course gives participants broad study of security controls and techniques on Google Cloud. Through lectures, demonstrations, and hands-on labs, participants explore and deploy
the components of a secure GCP solution. Participants also learn mitigation techniques for attacks at many points in a GCP-based infrastructure, including Distributed Denial-of-Service
attacks, phishing attacks, and threats involving content classification and use.

Dirigido a:

This class is intended for the following job roles:
? Cloud information security analysts, architects, and engineers
? Information security/cybersecurity specialists
? Cloud infrastructure architects
? Developers of cloud applications

Objetivos:

- This course teaches participants the following skills:
- ? Understanding the Google approach to security
- ? Managing administrative identities using Cloud Identity.
- ? Implementing least privilege administrative access using Google Cloud Resource
- Manager, Cloud IAM.
- ? Implementing IP traffic controls using VPC firewalls and Cloud Armor
- ? Implementing Identity Aware Proxy
- ? Analyzing changes to the configuration or metadata of resources with GCP audit logs
- ? Scanning for and redact sensitive data with the Data Loss Prevention API
- ? Scanning a GCP deployment with Forseti
- ? Remediating important types of vulnerabilities, especially in public access to data and
- VMs

Prerequisitos:

To get the most out of this course, participants should have:

? Prior completion of Google Cloud Platform Fundamentals: Core Infrastructure or

equivalent experience

? Prior completion of Networking in Google Cloud Platform or equivalent experience

? Knowledge of foundational concepts in information security:

? Fundamental concepts:

¦ vulnerability, threat, attack surface

¦ confidentiality, integrity, availability

Common threat types and their mitigation

strategies

? Public-key cryptography

¦ Public and private key pairs

¦ Certificates

¦ Cipher types

¦ Key width

? Certificate authorities

? Transport Layer Security/Secure Sockets Layer encrypted communication

? Public key infrastructures

? Security policy

? Basic proficiency with command-line tools and Linux operating system environments

? Systems Operations experience, including deploying and managing applications, either

on-premises or in a public cloud environment

? Reading comprehension of code in Python or JavaScript

Contenido:

Module 1

Foundations of GCP

Security

? Understand the GCP shared security responsibility model

? Understand Google Cloud's approach to security

? Understand the kinds of threats mitigated by Google and by GCP

? Define and Understand Access Transparency and Access Approval

(beta)

Module 2

Cloud Identity

? Cloud Identity

? Syncing with Microsoft Active Directory using Google Cloud Directory

Sync

? Using Managed Service for Microsoft Active Directory (beta)

? Choosing between Google authentication and SAML-based SSO

? Best practices, including DNS configuration, super admin accounts

? Lab: Defining Users with Cloud Identity Console

Module 3

Module 5

Securing Compute Engine:

techniques and best

practices

? Compute Engine service accounts, default and customer-defined

? IAM roles for VMs

? API scopes for VMs

? Managing SSH keys for Linux VMs

? Managing RDP logins for Windows VMs

? Organization policy controls: trusted images, public IP address,

disabling serial port

? Encrypting VM images with customer-managed encryption keys and

with customer-supplied encryption keys

? Finding and remediating public access to VMs

? Best practices, including using hardened custom images, custom

service accounts (not the default service account), tailored API

scopes, and the use of application default credentials instead of

user-managed keys

? Lab: Configuring, using, and auditing VM service accounts and scopes

? Cloud Security Scanner

? Lab: Using Cloud Security Scanner to find vulnerabilities in an App

Engine application

? Identity Aware Proxy

? Lab: Configuring Identity Aware Proxy to protect a project

Module 8

Securing Kubernetes:

techniques and best

practices

? Authorization

? Securing Workloads

? Securing Clusters

? Logging and Monitoring

PART III: MITIGATING VULNERABILITIES IN GOOGLE CLOUD

Module 9

Protecting against

Distributed Denial of Service

Attacks

? How DDoS attacks work

? Mitigations: GCLB, Cloud CDN, autoscaling, VPC ingress and egress

Identity, Access, and Key

Management

? GCP Resource Manager: projects, folders, and organizations

? GCP IAM roles, including custom roles

? GCP IAM policies, including organization policies

? GCP IAM Labels

? GCP IAM Recommender

? GCP IAM Troubleshooter

? GCP IAM Audit Logs

? Best practices, including separation of duties and least privilege, the

use of Google groups in policies, and avoiding the use of primitive

roles

? Labs: Configuring Cloud IAM, including custom roles and organization

policies

Module 4

Configuring Google Virtual

Private Cloud for Isolation

and Security

? Configuring VPC firewalls (both ingress and egress rules)

? Load balancing and SSL policies

? Encrypting VM disks with customer-supplied encryption keys

? Lab: Encrypting disks with customer-supplied encryption keys

? Using Shielded VMs to maintain the integrity of virtual machines

Module 6

Securing cloud data:

techniques and best

practices

? Cloud Storage and IAM permissions

? Cloud Storage and ACLs

? Auditing cloud data, including finding and remediating publicly

accessible data

? Signed Cloud Storage URLs

? Signed policy documents

? Encrypting Cloud Storage objects with customer-managed encryption

keys and with customer-supplied encryption keys

? Best practices, including deleting archived versions of objects after

key rotation

? Lab: Using customer-supplied encryption keys with Cloud Storage

? Lab: Using customer-managed encryption

firewalls, Cloud Armor (including its rules language)

? Types of complementary partner products

? Lab: Configuring GCLB, CDN, traffic blacklisting with Cloud Armor

Module 10

Protecting against

content-related

vulnerabilities

? Threat: Ransomware

? Mitigations: Backups, IAM, Data Loss Prevention API

? Threats: Data misuse, privacy violations,

sensitive/restricted/unacceptable content

? Threat: Identity and Oauth phishing

? Mitigations: Classifying content using Cloud ML APIs; scanning and

redacting data using Data Loss Prevention API

? Lab: Redacting Sensitive Data with Data Loss Prevention API

Module 11

Monitoring, Logging,

Auditing, and Scanning

? Security Command Center

? Stackdriver monitoring and logging

? Private Google API access

? SSL proxy use

? Best practices for VPC networks, including peering and shared VPC

use, correct use of subnetworks

? Best security practices for VPNs

? Security considerations for interconnect and peering options

? Available security products from partners

? Defining a service perimeter, including perimeter bridges

? Setting up private connectivity to Google APIs and services

? Lab: Configuring VPC firewalls

PART II: SECURITY BEST PRACTICES ON GOOGLE CLOUD

keys with Cloud Storage

and Cloud KMS

? BigQuery authorized views

? BigQuery IAM roles

? Best practices, including preferring IAM permissions over ACLs

? Lab: Creating a BigQuery authorized view

Module 7

Securing Applications:

techniques and best

practices

? Types of application security vulnerabilities

? DoS protections in App Engine and Cloud Functions

? Lab: Installing Stackdriver agents

? Lab: Configuring and using Stackdriver monitoring and logging

? VPC flow logs

? Lab: Viewing and using VPC flow logs in Stackdriver

? Cloud audit logging

? Lab: Configuring and viewing audit logs in Stackdriver

? Deploying and Using Forseti

? Lab: Inventorying a Deployment with Forseti Inventory (demo)

? Lab: Scanning a Deployment with Forseti Scanner (demo
