

## Red Hat Security: Identity Management and Authentication

**Duración: 4 Días    Código del Curso: RH362    Método de Impartición: Curso Remoto (Virtual)**

### Temario:

**Provide help to secure, centralized identity management services to coordinate user authentication and authorization with client systems, network services, and Windows domains.**

Red Hat Security: Identity Management and Authentication (RH362) provides the skills to configure and manage Identity Management (IdM), the comprehensive identity management component bundled with Red Hat Enterprise Linux.

This course helps students to gain the skills with this technology most requested by customers.

Businesses will be able to integrate and centralize lifecycle management and security policy implementation and enforcement, and extend that consolidated management to additional enterprise configuration management products from the Red Hat portfolio, including Red Hat Ansible Automation Platform and Red Hat Satellite Server.

Some topics covered in this course are: central management and provisioning of user accounts, design and installation of IdM server topologies, operation of the integrated DNS and TLS Certificate Authority services, management of two-factor authentication, smart card authentication, and operation as a single-sign on provider, integration and management of two-way trusts with Active Directory, troubleshooting and disaster recovery planning. Registration of Linux clients to IdM and operation in enterprise environments that use both Linux and Microsoft Windows clients and servers is discussed.

**Note:** Starting January 1, 2026, Red Hat introduces RHLS-Course — a flexible subscription model now included with this catalog offering. This replaces the previous direct virtual class enrollment from Global Knowledge.

When you purchase this item, you'll receive an RHLS subscription at the course level, giving you the freedom to choose the schedule that works best and self-enroll in your selected class.

Your RHLS subscription includes:

- One live, instructor-led virtual session
- 12 months of self-paced learning access
- One certification exam with a free retake

*Onsite Classroom-based sessions and closed course options remain unchanged.*

*Updated Jan2026*

### Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

### Dirigido a:

Red Hat Certified System Engineers (RHCE) who wish to learn how to provision and configure centralized identity management solutions for Linux clients and how to integrate them with other network services and identity management systems. Identity Management specialists or engineers, Access Management specialists or engineers.

### Objetivos:

- |   |   |
|---|---|
| ■ After this course participants should be able to:   | ■ Create and manage a trust relationship with Microsoft Active Directory.                               |
| ■ Design an Identity Management topology for scale and resiliency.                          | ■ Configure to help secure user authentication, including two-factor authentication and single sign-on. |
| ■ Describe key technologies used by IdM, including SSSD, PAM, Kerberos, and PKI.            | ■ Configure and manage Sudo, HBAC, and RBAC policies.   |
| ■ Install Identity Management (IdM) servers, replicas, and clients using Ansible Playbooks. | ■ Manage secrets, vaults, certificates, and keys.   |
| ■ Manage IdM services, including integrated DNS and CA.                                     | ■ Troubleshoot identity management.   |
| ■ Configure and manage Kerberos authentication and secure                                   | ■ Integrate Satellite 6 and Red Hat Ansible Automation Platform with                                    |

services.

- Configure and manage TLS certificates.

IdM.

- Configure IdM backup and recovery.

## Prerequisites:

- An RHCE certification or equivalent skill is a prerequisite to this course.  
Take Red Hat free assessment to gauge whether this offering is the best fit for your skills [Red Hat Skills Assessment](#)

## Exámenes y certificación

- Red Hat Certified Specialist in Identity Management exam (EX362)

## Siguientes cursos recomendados:

None

## Contenido:

Identity Management in Red Hat Enterprise Linux

- Introduce Identity Management in Red Hat Enterprise Linux (IdM) and its high-level architecture.

Identity Management Core Technologies

- Review the core technologies of Identity Management (IdM) in Red Hat Enterprise Linux.

Installing Identity Management in Red Hat Enterprise Linux

- Install Identity Management servers, replicas, and clients on Red Hat Enterprise Linux 9.

Implementing an Identity Management Topology

- Implement continuous functionality and high availability of IdM services in single-site and geographically distributed topologies.

Managing the CA and DNS Integrated Services

- Manage the Certificate Authority (CA) and the Domain Name System (DNS) services that are integrated with Identity Management.

Managing Users and Controlling User Access

- Configure users for authorized access to services and resources.

Configuring Alternative Authentication Services

- Configure and manage smart card authentication, secrets, and two-factor authentication.

Integrating Identity Management with Active Directory

- Implement a cross-forest trust between Identity Management and Active Directory, and configure ID views to map POSIX attributes to Active Directory users.

Integrating Identity Management with Red Hat Utilities

- Integrate an Identity Management deployment with Red Hat Satellite and Red Hat Ansible Automation Platform.

Troubleshooting and Disaster Recovery Planning for IdM

- Troubleshooting and preparing for disaster recovery with Identity Management.

Comprehensive Review

- Build a small, resilient Identity Management topology to include multiple replicas and clients, populated with multiple users, credentials, policies, and access rights.
