

Implementing and Operating Cisco Service Provider Network Core Technologies

Durée: 5 Jours Réf de cours: SPCOR Version: 1.1

Résumé:

The Implementing and Operating Cisco Service Provider Network Core Technologies (SPCOR) course teaches you how to configure, verify, troubleshoot, and optimize next-generation, Service Provider IP network infrastructures. It provides a deep dive into Service Provider technologies including core architecture, services, networking, automation, quality of services, security, and network assurance.

Please note that this course is a combination of Instructor-Led and Self-Paced Study - 5 days in the classroom and approx 3 days of self study. The self-study content will be provided as part of the digital courseware that you will receive at the beginning of the course and should be part of your preparation for the exam.

Public visé:

Individuals looking to verify, troubleshoot and optimize next-generation, Service Provider IP network infrastructures.

Objectifs pédagogiques:

- After completing this course you should be able to:
 - Configure and verify MPLS L2VPN in Service Provider environments
 - Configure and verify MPLS L3VPN in Service Provider environments
 - Implement IP multicast services
 - Describe the QoS architecture and QoS benefits for SP networks
 - Implement QoS in Service Provider environments
 - Implement control plane security in Cisco devices
 - Implement management plane security in Cisco devices
 - Implement data plane security in Cisco devices
 - Describe the YANG data modeling language
 - Implement automation and assurance tools and protocols
 - Describe the role of Cisco NSO in Service Provider environments
 - Implement virtualization technologies in Service Provider environments
- Describe the Service Provider network architectures, concepts, and transport technologies
- Describe the Cisco IOS software architectures, main IOS types, and their differences
- Implement OSPF in the Service Provider network
- Implement Integrated IS-IS in the Service Provider network
- Implement BGP routing in Service Provider environments
- Implement route maps and routing policy language
- Describe IPv6 transition mechanisms used in the Service Provider networks
- Implement high-availability mechanisms in Cisco IOS XR software
- Implement traffic engineering in modern Service Provider networks for optimal resource utilization
- Describe segment routing and segment routing traffic engineering concepts
- Describe the VPN technologies used in the Service Provider environments

Pré-requis:

Attendees should meet the following prerequisites:

Test et certification

Recommended as preparation for the following exams:

- Intermediate knowledge of Cisco IOS or IOS XE
- Familiarity with Cisco IOS or IOS XE and Cisco IOS XR Software configuration
- Knowledge of IPv4 and IPv6 TCP/IP networking
- Intermediate knowledge of IP routing protocols
- Understanding of MPLS technologies
- Familiarity with VPN technologies
- CCNA - Mettre en oeuvre et administrer des solutions réseaux Cisco

■ **350-501** - Implementing and Operating Cisco® Service Provider Network Core Technologies (SPCOR) exam.

After passing the 350-501-Implementing and Operating Cisco® Service Provider Network Core Technologies (SPCOR) exam, you will automatically be awarded the Cisco Certified Specialist – Service Provider Core certification and will have completed the mandatory core element of the Cisco CCNP Service Provider Certification.

Après cette formation, nous vous conseillons le(s) module(s) suivant(s):

- SPAUI - Implementing Automation for Cisco Service Provider Solutions
 - SPRI - Implementing Cisco Service Provider Advanced Routing Solutions
 - SPVI - Implementing Cisco Service Provider VPN Services
-

Contenu:

Describing Service Provider Network Architectures (Self-Study)	Implementing Cisco MPLS Traffic Engineering	Implementing Management Plane Security
<ul style="list-style-type: none">■ Service Provider Core Architectures■ MPLS Introduction■ Unified MPLS■ Segment Routing Introduction■ Network Transport Technologies■ Ethernet OAM Overview■ ERP Overview■ RAN Introduction■ Evolved Packet Core■ 5G Networks Introduction	<ul style="list-style-type: none">■ Traffic Engineering Concepts■ Cisco MPLS TE Introduction■ Cisco MPLS TE Operation■ Constraint-Based Path Computation■ Cisco MPLS TE Tunnel Attributes■ Traffic Steering■ Cisco MPLS TE Implementation■ Protection of Cisco MPLS TE Traffic	<ul style="list-style-type: none">■ Management Plane Security Overview■ AAA Implementation■ REST API Security
Describing Cisco IOS Software Architectures	Describing Segment Routing	Implementing Data Plane Security
<ul style="list-style-type: none">■ Cisco IOS Software Introduction■ Cisco IOS XE Software Introduction■ Cisco IOS XR Architecture■ Cisco IOS XR Software Introduction■ Cisco IOS XR 64-Bit Operational Enhancements■ Cisco IOS XR Container and VM Architecture	<ul style="list-style-type: none">■ Segment Routing Concepts■ SR IGP Control Plane Overview■ Segment Types■ TI-LFA Fundamentals■ Segment Routing TE Overview■ PCE-PCC Architecture	<ul style="list-style-type: none">■ ACL Implementation■ uRPF Implementation■ RTBH Filtering Implementation
Implementing OSPF	Describing VPN Services	Introducing Network Programmability
<ul style="list-style-type: none">■ OSPF Introduction■ OSPF Routing■ OSPF Link-State Database■ OSPF Operation■ OSPF Adjacencies and Modes■ OSPF Implementation■ Multiarea OSPF■ OSPFv3 Implementation■ Basic OSPF Troubleshooting	<ul style="list-style-type: none">■ VPN Introduction■ MPLS VPN Architecture■ MPLS VPN Routing■ Interdomain MPLS VPN Solutions■ CSC Overview■ Multicast VPN Overview■ EVPN Introduction■ EVPN Terminology and Concepts	<ul style="list-style-type: none">■ Network Programmability Introduction■ Network APIs and Protocols Introduction■ YANG Introduction■ YANG Data Types■ XPath Overview■ Basic YANG Statements■ Pyang Tool
Implementing IS-IS	Configuring L2VPN Services	Implementing Automation and Assurance
<ul style="list-style-type: none">■ IS-IS Introduction■ Integrated IS-IS Routing■ IS-IS Operation■ IS-IS Link-State Database■ Integrated IS-IS for IPv6■ IS-IS Configuration for IPv4■ IS-IS Configuration for IPv6■ Basic IS-IS Troubleshooting	<ul style="list-style-type: none">■ Layer 2 VPN Introduction■ MPLS Layer 2 VPN Types■ EoMPLS Configuration■ VPLS Configuration	<ul style="list-style-type: none">■ NETCONF Overview■ RESTCONF Overview■ gNMI Overview■ Model Driven Telemetry Overview■ NetFlow Overview■ SNMP Overview
Implementing BGP	Configuring L3VPN Services	Introducing Cisco NSO
<ul style="list-style-type: none">■ BGP Introduction■ BGP in Customer Connections■ BGP Routing■ BGP Implementation■ BGP Path Selection■ Weight and Local Preference■ AS Path Prepending and MEDs■ BGP Communities■ Route Redistribution Introduction■ Redistribution Implementation■ Basic BGP Troubleshooting	<ul style="list-style-type: none">■ MPLS L3VPN Backbone Implementation■ VRF Configuration■ MP-BGP Configuration■ Basic PE-CE Routing Implementation■ OSPF as PE-CE Protocol■ BGP as PE-CE Protocol■ MPLS L3VPN Shared Services■ Internet Access in MPLS L3VPN	<ul style="list-style-type: none">■ Logical Architecture■ Components■ Orchestration Use Cases■ Packages■ Mapping Logic■ Network Element Drivers
Implementing Route Maps and RPL	Implementing Multicast	Implementing Virtualization in Service Provider Environments
	<ul style="list-style-type: none">■ Multicast Overview■ Multicast Service Model■ Multicast Protocols■ PIM-SM Introduction■ Dynamic RP Mechanisms■ PIM-SM Enhancements Overview■ Interdomain Multicast Routing■ IPv6 Multicast Implementation	<ul style="list-style-type: none">■ NFV Infrastructure■ OpenStack Introduction
	Describing QoS Architecture	Labs
		<ul style="list-style-type: none">■ Deploy Cisco IOS XR and IOS XE Basic Device Configuration■ Implement OSPF Routing■ Implement Integrated IS-IS Routing■ Implement Basic BGP Routing■ Filter BGP Prefixes Using RPL■ Implement MPLS in the Service Provider Core■ Implement Cisco MPLS Traffic Engineering (TE)■ Implement Segment Routing■ Implement Ethernet over MPLS (EoMPLS)■ Implement MPLS L3VPN■ Implement BGP Security■ Implement Remotely Triggered Black Hole

		(RTBH) Filtering
<ul style="list-style-type: none"> ■ Routing Protocol Tools Overview ■ Prefix Lists and AS Path Access Lists ■ Route Map Introduction ■ RPL Introduction ■ RPL Parameters and Parameterization ■ RPL Implementation 	<ul style="list-style-type: none"> ■ QoS Introduction ■ Models for Implementing QoS ■ QoS Trust Boundaries ■ MPLS QoS Introduction ■ Cisco MPLS TE QoS 	
Transitioning to IPv6	Implementing QoS	
<ul style="list-style-type: none"> ■ Transitioning from IPv4 to IPv6 ■ Translation Mechanisms ■ IPv6 Tunneling Mechanisms 	<ul style="list-style-type: none"> ■ QoS Mechanisms ■ QoS Implementation ■ Congestion Management ■ Congestion Avoidance Implementation ■ Traffic Policing and Shaping 	
Implementing High Availability in Networking	Implementing Control Plane Security	
<ul style="list-style-type: none"> ■ Cisco Nonstop Forwarding Overview ■ Bidirectional Forwarding Detection Support ■ Link Aggregation 	<ul style="list-style-type: none"> ■ Control Plane Protection Overview ■ LDP Security Implementation ■ IGP Control Plane Security ■ BGP Security Implementation ■ BGP FlowSpec Implementation 	
Implementing MPLS		
<ul style="list-style-type: none"> ■ MPLS Architecture ■ MPLS Applications ■ LDP Introduction ■ MPLS Forwarding Introduction ■ MPLS Forwarding Operation ■ MPLS Configuration ■ LDP Advanced Configuration ■ MPLS Monitoring ■ MPLS Troubleshooting ■ Unified MPLS Architecture 		

Autres moyens pédagogiques et de suivi:

- Compétence du formateur : Les experts qui animent la formation sont des spécialistes des matières abordées et ont au minimum cinq ans d'expérience d'animation. Nos équipes ont validé à la fois leurs connaissances techniques (certifications le cas échéant) ainsi que leur compétence pédagogique.
- Suivi d'exécution : Une feuille d'émarginement par demi-journée de présence est signée par tous les participants et le formateur.
- En fin de formation, le participant est invité à s'auto-évaluer sur l'atteinte des objectifs énoncés, et à répondre à un questionnaire de satisfaction qui sera ensuite étudié par nos équipes pédagogiques en vue de maintenir et d'améliorer la qualité de nos prestations.

Délais d'inscription :

- Vous pouvez vous inscrire sur l'une de nos sessions planifiées en inter-entreprises jusqu'à 5 jours ouvrés avant le début de la formation sous réserve de disponibilité de places et de labs le cas échéant.
- Votre place sera confirmée à la réception d'un devis ou "booking form" signé. Vous recevrez ensuite la convocation et les modalités d'accès en présentiel ou distanciel.
- Attention, si cette formation est éligible au Compte Personnel de Formation, vous devrez respecter un délai minimum et non négociable fixé à 11 jours ouvrés avant le début de la session pour vous inscrire via moncompteformation.gouv.fr.

Accueil des bénéficiaires :

- En cas de handicap : plus d'info sur globalknowledge.fr/handicap
- Le Règlement intérieur est disponible sur globalknowledge.fr/reglement
