
GDPR - Certified Information Privacy Professional and Technologist prep course

Duration: 4 Days Course Code: CIPPE-CIPT Delivery Method: Virtual Learning

Overview:

Course Description:

In this course you will gain foundational knowledge on both broad and global concepts of privacy and data protection laws and practice. You will learn common principles and approaches to privacy as well as understand the major privacy models employed around the globe. An introduction to information security concepts and information security management and governance will be covered including frameworks, controls, and identity and access management. You will also learn about online privacy as it relates to using personal information on websites and other internet-related technologies.

This course delves into the context of European data protection law: origins, institutions and legislative framework; data protection concepts, principles and application, including processing criteria, obligations, data subject rights, confidentiality and security, notification requirements, international data transfers, and supervision and enforcement; and European data protection practices related to employment, surveillance, direct marketing and outsourcing.

You will also learn the need and importance for privacy in the IT environment with impacts such as regulatory activities, security threats, advances in technology and the proliferation of social networks. This course will provide an introduction to privacy laws, regulations, and standards impacting privacy in IT and the risks inherent in the IT environment. You will also learn about the importance of personally identifiable information and methods for ensuring its protection.

The CIPP/E and CIPT designations are accredited under the internationally recognized ANSI/ISO standard 17024:2012, an acknowledgement of the quality and integrity of the programme.

This three-day programme covering the principals of information privacy, principles of data protection in Europe and principles of privacy in technology includes:

Official IAPP CIPP/E and CIPT Participant Guides

Official IAPP CIPP/E and CIPT Textbooks

Official IAPP CIPP/E and CIPT Practice Tests

IAPP CIPP/E and CIPT Certification Exam Vouchers

One-Year IAPP Membership

Your contact information must be provided to the IAPP for membership services fulfilment

All students will receive official IAPP resources as well as One Year IAPP membership.

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Target Audience:

Individuals who need a foundational understanding of information privacy and data protection in an IT environment. Those individuals interested in pursuing CIPP/E and CIPT certifications.

Content:

Day 1	Unit 1: Introduction to European Data Protection	Unit 3: Regulations and Standards Impacting Privacy in IT
Module 1: Fundamentals of Information Privacy	This unit introduces the origins and historical context for privacy in Europe, the European regulatory institutions and the legislative framework for current EU data protection law at both the EU and state level.	This unit introduces privacy laws, regulations and standards that can help IT professionals design better privacy programmes and systems to handle personal information throughout the data lifecycle.
Unit 1: Common Principles and Approaches to Privacy		
This unit includes a brief discussion about the modern history of privacy, an introduction to types of information, an overview of information risk management and a summary of modern privacy principles.	Unit 2: European Data Protection Law and Regulation	Unit 4: Privacy in Systems and Applications
Unit 2: Jurisdiction and Industries	This unit takes an in-depth look at data protection concepts, application of the law, data protection principles, legitimate processing criteria, information provision obligations, data subject rights, confidentiality and security, notification requirements, international data transfers, and supervision and enforcement.	This unit develops an understanding of the risks inherent in the IT environment and how to address them.
This unit introduces the major privacy models employed around the globe and provides an overview of privacy and data protection regulation by jurisdictions and by industry sectors.	Unit 3: Compliance with European Data Protection Law and Regulation	Unit 5: Online Privacy Issues
Unit 3: Information Security: Safeguarding Personal Information	This unit examines the employment relationship, surveillance activities, marketing activities, internet technology and communications, and outsourcing.	This unit presents information about online threats, threat prevention and the role of IT professionals to ensure proper handling of user data.
This unit presents introductions to information security, including definitions, elements, standards, and threats/vulnerabilities, as well as introductions to information security management and governance, including frameworks, controls, cryptography and identity and access management (IAM).	Day 3	Unit 6: De-identifying and Anonymising Personally Identifiable Information
Unit 4: Online Privacy: Using Personal Information on Websites and with Other Internet-related Technologies	Module 3: Privacy in Technology	This unit describes the importance of personally identifiable information and methods for ensuring its protection.
This unit discusses the web as a platform, as well as privacy considerations for sensitive online information, including policies and notices, access, security, authentication identification and data collection. Additional topics include children's online privacy, email, searches, online marketing and advertising, social media, online assurance, cloud computing, and mobile devices.	Unit 1: Understanding the Need for Privacy in the IT Environment	Unit 7: Cloud Computing
	This unit describes the impact which regulatory activities, security threats, advances in technology and the increasing proliferation of social networks have on IT departments.	This unit discusses privacy and security concerns associated with cloud services, and standards that exist to advise on their use.
Day 2	Unit 2: Core Privacy Concepts	
Module 2: European Privacy	This unit discusses how developing information lifecycle plans, data identification and classification systems, and data flow diagrams will make privacy compliance more attainable.
