
Systems Operations on AWS

Duration: 3 Days Course Code: GK4503 Delivery Method: Virtual Learning

Overview:

System Operations on AWS is designed to teach those in a Systems Administrator or Developer Operations (DevOps) role how to create automatable and repeatable deployments of networks and systems on the AWS platform. The course covers the specific AWS features and tools related to configuration and deployment, as well as common techniques used throughout the industry for configuring and deploying systems.

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Target Audience:

This course is intended for: System Administrators Software Developers, especially those in a Developer Operations (DevOps) role

Objectives:

- This course is designed to teach you how to:
 - Use standard AWS infrastructure features such as Amazon Virtual Private Cloud (VPC), Amazon Elastic Compute Cloud (EC2), Elastic Load Balancing, and Auto Scaling from the command line
 - Use AWS CloudFormation and other automation technologies to produce stacks of AWS resources that can be deployed in an automated, repeatable fashion
 - Build functioning virtual private networks with Amazon VPC from the ground up using the AWS Management Console
 - Deploy Amazon EC2 instances using command line calls and troubleshoot the most common problems with instances
 - Monitor the health of Amazon EC2 instances and other AWS services
 - Manage user identity, AWS permissions, and security in the cloud
 - Manage resource consumption in an AWS account using tools such as Amazon CloudWatch, tagging, and Trusted Advisor
 - Select and implement the best strategy for creating reusable Amazon EC2 instances
 - Configure a set of Amazon EC2 instances that launch behind a load balancer, with the system scaling up and down in response to demand
 - Edit and troubleshoot a basic AWS CloudFormation stack definition
-

Prerequisites:

We recommend that attendees of this course have the following prerequisites:

- Attended the AWS Essentials (GK4501) course
 - Background in either software development or systems administration
 - Some experience with maintaining operating systems at the command line (shell scripting in Linux environments, cmd or PowerShell in Windows)
 - Basic knowledge of networking protocols (TCP/IP, HTTP)
-

Content:

This course will cover the following concepts on each day:

Day 1

- System Operations on AWS Overview
- Networking in the Cloud
- Computing in the Cloud

Day 2

- Storage and Archiving in the Cloud
- Monitoring in the Cloud
- Managing Resource Consumption in the Cloud

Day 3

- Configuration Management in the Cloud
- Creating Scalable Deployments in the Cloud
- Creating Automated and Repeatable Deployments
