
Cisco Network Services Orchestrator (NSO) Advanced Design

Duration: 4 Days Course Code: NSO300 Delivery Method: Virtual Learning

Overview:

This course explores how to create advanced services using the NSO application framework and Python scripting with both new and existing Layer 3 Multiprotocol Label Switching (MPLS) VPN services. Students will also learn how to manage and scale these services, and how to use NSO Network Functions Virtualization (NFV) orchestration features and Cisco Elastic Services Controller (ESC) to manage Virtualized Network Functions (VNFs).

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Target Audience:

The primary audience for this course is system installers, system integrators, system administrators, network administrators, and solutions designers.

Objectives:

- At the end of this course, you will be able to:
 - Describe the NSO's transactional application framework and mapping model options
 - Describe the Reactive Fastmap design pattern and the NSO Configuration Database (CDB) subscriber in the NSO Transaction model
 - Simplify packages to remove the need for subscriber applications, scale orchestration solutions, and integrate NSO with external systems (east-west integration)
 - Describe the Cisco ESC architecture and integration with NSO, and how the NSO VNF Orchestration (VNFO) Release 2 bundle interacts with ESC for orchestration
-

Content:

Module 1:

- Cisco NSO Programmability
- NSO Application Framework
- NSO Python Scripting
- NSO Python and Template-Based Services
- Resources

Module 2: Augmenting Cisco NSO Service

- Augmenting Cisco NSO Service
- Service Lifecycle and Integration Options Overview
- Greenfield Layer 3 MPLS VPN Service
- Brownfield Layer 3 MPLS VPN Service

Module 3: Managed Services

- Managed Services Overview
- Stacked Service Design Overview
- Design-Managed Network Services
- Scaling Service Orchestration

Module 4: Cisco NSO Network Functions Virtualization (NFV) Orchestration

- ETSI MANO
- Cisco ESC
- Cisco NSO Orchestration © 2018 Cisco and/or its affiliates

Lab 1: Device Setup Using Python Script

Lab 2: Create an SVI Service Using pre_modification Service Callback

Lab 3: Create a L3VPN Service Using Dynamic ID Allocation

Lab 4: L3VPN Service Upgrade

Lab 5: Stacked Services

Lab 6: Service Action

Lab 7: ESC Integration

Lab 8: NFV for the DMZ Service
