

## English Delivery Only: Configuring F5 Advanced WAF

Cursusduur: 4 Dagen    Cursuscode: F5N\_BIG-AWF-CFG    Trainingsmethode: Maatwerk

### Beschrijving:

Learn to deploy and operate F5 Advanced WAF to protect web applications from the most critical security risks as described in the OWASP Top 10 list, from bots and other automated agents, and from Denial of Service (DoS) attacks operating at the HTTP layer of the web application delivery ecosystem. Through a combination of lecture, hands-on labs, and discussion, secure applications from the majority of common attacks by the end of the first day. Take technical deep dives into mitigating web scraping, account aggregation, account creation, ad fraud, CAPTCHA defeat, card cracking, carding, cashing out, credential stuffing, and other unwanted automated application abuse as described in the OWASP automated threats list.

Observe various vulnerability mitigations in real time by playing the role of an attacker in lab exercises. Gain context for securing applications, including analysis of HTTP and the elements of both modern and traditional web applications such as file types, parameters, URLs, and login pages. Learn to recognize client and server-side technologies such as JSON and AJAX, and learn to address vulnerabilities that might be present in common application development tools such as PHP, AngularJS, and others.

Review recommended practices for reporting, security event logging, and integration with third-party web application vulnerability scanners in detail. Follow prescribed step-by-step directions for activities initially, and gradually gain proficiency so that, by the end of class, little or no instruction is needed to complete simple to more complex configurations.

### Maatwerk

Global Knowledge biedt zowel standaard- als maatwerk cursussen die zijn afgestemd op uw wensen en die als besloten cursus op uw eigen locatie of onze locatie gevolgd kunnen worden.

### Doelgroep:

This course is intended for SecOps personnel responsible for the deployment, tuning, and day-to-day maintenance of F5 Adv. WAF. Participants will obtain a functional level of expertise with F5 Advanced WAF, including comprehensive security policy and profile configuration, client assessment, and appropriate mitigation types.

### Vereiste kennis en vaardigheden:

Experience with LTM and prior WAF knowledge are not required.

#### Suggested Prework

The following free Self-Directed Training (SDT) courses, although optional, are helpful for any student with limited BIG-IP administration and configuration experience:

- Getting Started with BIG-IP
- Getting Started with Local Traffic Manager (LTM)
- Getting Started with F5 Advanced WAF

General network technology knowledge and experience are recommended before attending any F5 Global Training Services instructor-led course, including OSI model encapsulation, routing and switching, Ethernet and ARP, TCP/IP concepts, IP addressing and subnetting, NAT and private IP addressing, NAT and private IP addressing, default gateway, network firewalls, and LAN vs. WAN.

### Examens en certificering

<https://www.f5.com/learn/certification>

Exam vouchers are available at an additional cost - please ask for details.

## Cursusinhoud:

### Chapter 1: Introducing the BIG-IP System

- Initially Setting Up the BIG-IP System
- Archiving the BIG-IP Configuration
- Leveraging F5 Support Resources and Tools

### Chapter 2: Traffic Processing with BIG-IP

- Identifying BIG-IP Traffic Processing Objects
- Understanding Profiles
- Overview of Local Traffic Policies
- Visualizing the HTTP Request Flow

### Chapter 3: Overview of Web Application Processing

- Web Application Firewall: Layer 7 Protection
- Layer 7 Security Checks
- Overview of Web Communication Elements
- Overview of the HTTP Request Structure
- Examining HTTP Responses
- How F5 Advanced WAF Parses File Types, URLs, and Parameters
- Using the Fiddler HTTP Proxy

### Chapter 4: Overview of Web Application Vulnerabilities

- A Taxonomy of Attacks: The Threat Landscape

- Defining Attack Signatures
- Attack Signature Basics
- Creating User-Defined Attack Signatures
- Defining Simple and Advanced Edit Modes
- Defining Attack Signature Sets
- Defining Attack Signature Polish
- Understanding Attack Signatures and Staging
- Updating Attack Signatures
- Defining Threat Campaigns
- Deploying Threat Campaigns

### Chapter 8: Positive Security Policy Building

- Defining and Learning Security Policy Components
- Defining the Wildcard
- Defining the Entity Lifecycle
- Choosing the Learning Scheme
- How to Learn: Never (Wildcard Only)
- How to Learn: Always
- How to Learn: Selective
- Reviewing the Enforcement Readiness Period: Entities
- Viewing Learning Suggestions and

- Defining Parameter Levels
- Other Parameter Considerations

### Chapter 13: Automatic Policy Building

- Defining Templates Which Automate Learning
- Defining Policy Loosening
- Defining Policy Tightening
- Defining Learning Speed: Traffic Sampling
- Defining Track Site Changes

### Chapter 14: Integrating with Web Application Vulnerability Scanners

- Integrating Scanner Output
- Importing Vulnerabilities
- Resolving Vulnerabilities
- Using the Generic XML Scanner XSD file

### Chapter 15: Deploying Layered Policies

- Defining a Parent Policy
- Defining Inheritance
- Parent Policy Deployment Use Cases

### Chapter 16: Login Enforcement and Brute Force Mitigation

- Defining Login Pages for Flow Control
- Configuring Automatic Detection of
