Red Hat Cloud-native Microservices Development with Quarkus and Exam (DO379)

Cursusduur: 5 Dagen Cursuscode: DO379

Beschrijving:

Develop microservice-based applications with Quarkus and OpenShift.

Enterprises are moving to cloud-native microservices architectures. Quarkus is an exciting new technology that brings the reliability, familiarity, and maturity of Java Enterprise with a container-ready lightning fast deployment time. Red Hat Cloud-native Microservices Development with Quarkus (DO378) emphasizes learning architectural principles and implementing microservices based on the Red Hat Build of Quarkus and Red Hat OpenShift. You will build on application development fundamentals and focus on how to develop, monitor, test, and deploy modern microservices applications. Red Hat Certified Cloud-native Developer exam included in this offering. The Red Hat Certified Cloud-native Developer exam is included in this offering.

This course is based on OpenShift 4.14, and Red Hat Build of Quarkus 3.8.

Doelgroep:

This course is designed for Java application developers.

Doelstelling:

- Deploy microservice applications on Red Hat?OpenShift Container Platform.
- Build a microservice application with Quarkus.
- Implement unit and integration tests for microservices.
- Use the config specification to inject data into a microservice.
- Secure a microservice using OAuth.
- Implement health checks, tracing and monitoring of microservices.
- Build reactive and asynchronous applications using Quarkus.

Vereiste kennis en vaardigheden:

- Experience with Java application development or Red Hat Application Development I: Programming in Java EE (AD183)
- Be proficient in using an IDE such as Visual Studio Code
- Recommended, but not required: experience with Maven and version control.
- Recommended, but not required: experience with OpenShift or Introduction to OpenShift Applications (DO101)

Vervolgcursussen:

- DO188 Red Hat OpenShift Development I: Introduction to Containers with Podman
- DO288 Red Hat OpenShift Developer II: Building and Deploying Cloud-native Applications
- DO328 Building Resilient Microservices with Istio and Red Hat OpenShift Service Mesh
- DO400 Red Hat DevOps Pipelines and Processes: CI/CD with Jenkins, Git, and Test Driven Development

Cursusinhoud:

Introducing the Red Hat Build of Quarkus Implementing Fault Tolerance in Developing Reactive and Asynchronous Microservices Microservices Describe the components and patterns of microservice-based application architectures Describe the features of reactive architectures Implement fault tolerance in a microservice and the features of the Red Hat Build of and implement reactive services by using architecture Quarkus Quarkus. Monitoring Quarkus Microservices Developing Cloud-native Microservices with Securing Quarkus Microservices Quarkus Monitor the operation of a microservice by Secure microservice communications by using logging, metrics and distributed tracing. Implement microservices based applications by applying origin validation, requests using the Red Hat Build of Quarkus runtime authentication and authorization. and associated developer tooling. Implementing Quarkus Microservices on the **Testing Quarkus Microservices** Red Hat OpenShift Container Platform Implement unit and integration tests for Develop and deploy cloud-native applications microservices. on the Red Hat OpenShift Container Platform.

Extra informatie:

Impact on the Organization Organizations are striving to make the move from monolithic applications to applications based on microservices, as well as how to reorganize their development paradigm to reap the benefits of microservice development in a DevOps economy. With Quarkus, developers can more quickly build, test, and deploy their applications, improving application time to market. Organizations are also invested in the familiarity of Java programming frameworks as well as the stability and benefits Red Hat OpenShift Container Platform. This course teaches developers how to leverage microservice application development with Quarkus for streamlined deployment on OpenShift clusters.

Impact on the Individual

As a result of attending this course, you will understand how to develop, monitor, test, and deploy microservice-based applications using Quarkus and Red Hat OpenShift.

You should be able to demonstrate these skills: Design a microservices-based architecture for an enterprise application. Quickly build and test microservices with Quarkus and deploy on to OpenShift Container Platform. Implement fault tolerance and health checks for microservices. Secure microservices to prevent unauthorized access. Monitor and trace microservices.
