

Red Hat DevOps Pipelines and Processes: CI/CD with Jenkins, Git, and Test Driven Development

Cursusduur: 4 Dagen Cursuscode: DO400 Trainingsmethode: Maatwerk

Beschrijving:

Build essential skills to implement agile and DevOps development processes and workflows.

DevOps practices have enabled organizations to undergo a digital transformation, moving from a monolithic waterfall approach to a rapidly deploying cloud-based agile process. DevOps with Jenkins, Test-Driven Development, and Git version control, improves application time-to-market and code quality.

This approach makes applications more resilient and enables organizations to quickly implement new features and respond to a quickly changing market.

This transformation requires a team of developers trained to use tools that enable them to spend more time coding and testing and less time troubleshooting.

Red Hat DevOps Pipelines and Processes: CI/CD with Jenkins, Git, and Test-Driven Development (TDD) is a practical introduction to DevOps for developers that teaches students the necessary skills and technologies for automated building and deploying of cloud-native applications. You will be able to use the concepts in this course to simplify and more efficiently integrate your application code, build reliable code with TDD, and use automated pipelines to simplify testing. You will learn how to build pipelines, design applications with a “test first” approach, and integrate application code with Git. This course is intended to illustrate the benefits of DevOps and the tools that support its implementation.

Note: Starting January 2026 this course only exists in CR (classroom) if scheduled or Closed course modalities. No RHLS-Course for this course.

Customer can get access to the e-learning course content by purchasing a RedHat RHLS Standard subscription (access to the entire RedHat E-learning offering) - Contact us

Updated Jan2026

Maatwerk

Global Knowledge biedt zowel standaard- als maatwerkcursussen die zijn afgestemd op uw wensen en die als besloten cursus op uw eigen locatie of onze locatie gevolgd kunnen worden.

Doelgroep:

This course is designed for application developers.

Doelstelling:

- | | |
|---|--|
| ■ After this course participants should be able to: | ■ Build applications with Test Driven Development |
| ■ Manage Version control with Git | ■ Handle Security scanning and code analysis of applications |
| ■ Build and execute Jenkins pipelines | ■ Monitor applications and pipelines |
| ■ Release strategies | ■ Consume and troubleshoot pipelines |

Vereiste kennis en vaardigheden:

- Experience with application development in Java, Node.js, Python, or others is required.
- Experience with application development or Red Hat Application Development I: Programming in Java EE (AD183) is recommended, but not required.
- Proficiency in using an IDE such as Red Hat® Developer Studio or VSCode
- Introduction to OpenShift Applications (DO101) is recommended, but not required.

Take Red Hat free assessment to gauge whether this offering is the best fit for your skills [Red Hat Skills Assessment](#)

Examens en certificering

■

- AD183 - Red Hat Application Development I: Programming in Java EE
- DO101 - Introduction to OpenShift Applications

Vervolg cursussen:

- DevOps Culture and Practice Enablement (DO500)
- Introduction to Containers, Kubernetes, and Red Hat OpenShift (DO180)
- Red Hat OpenShift Development I: Containerizing Applications (DO288)
- DO500 - DevOps Culture and Practice Enablement
- DO180 - Red Hat OpenShift Administration I: Operating a Production Cluster
- DO288 - Red Hat OpenShift Developer II: Building and Deploying Cloud-native Applications

Cursusinhoud:

Introduction to continuous integration and continuous deployment (CI/CD)	Build applications with test-driven development	Implement pipeline security and monitoring
Describe the principles of DevOps and the role of Jenkins.	Implement and build application features with TDD.	Manage the security and monitor the performance of pipelines.
Integrate source code with version control	Author pipelines	Consume pipelines
Manage source code changes with Git version control.	Create basic pipelines to run Jenkins jobs.	Work with (or "Use") and troubleshoot CI/CD pipelines for automated deployment and automated testing.
Test applications	Deploy applications with pipelines	
Describe the foundational principles behind comprehensive application testing and implement unit, integration, and functional testing.	Safely and automatically deploy applications to Red Hat OpenShift Container Platform.
