z/OS System Programmer Fundamentals

Duration: 5 Days   Course Code: ES40G   Delivery Method: Maatwerk

Overview:

This course is designed to describe the basic components that apply to all z/OS systems. It includes high level concepts that apply to the z/OS hardware platform and the z/OS software. It then provides a more detailed analysis, description and lab activities that can be applied to the system programmer role to maintain z/OS systems.
Discussion activities include: The POR, IPL process, JES implementation and operating environment, VTAM environment for TSO, ISPF, SNA and TCP/IP networking, RACF, ISPF/PDF and UNIX System Services. It defines the classic approach to data management in a z/OS system. It identifies various software products and utilities used to define, maintain, and manage catalogs and data sets in the z/OS environment. It also discusses Parmlib usage and requirements for system initialization and operation that include: System symbolics, WLM, SFM, RMF and system logger. Both single system and multi-system sysplex usage is identified. z/OS install, upgrade options, maintenance using SMP/E and I/O configuration requirements using HCD is listed and described.

Maatwerk

Global Knowledge biedt zowel standaard- als maatwerkcursussen die zijn afgestemd op uw wensen en die als besloten cursus op uw eigen locatie of onze locatie gevolgd kunnen worden.

Target Audience:

This intermediate class is intended for new System Programmers and System Administrators, who require an overall understanding of the z/OS platform, z/OS components, data management, and installation and maintenance activities used in z/OS systems.

Objectives:

- Describe the basics of z/OS architecture

-

- Identify basic components of a z/OS system

-

- Discuss what you have learned about LPARs

-

- Describe maintenance principles

-

- Identify and list the POR process

-

- Describe the IPL process

-

- Identify the basic address spaces

-

- Describe how to shut down z/OS

-

- IDCAMS utility

-

- DFSMS: DFSMSdss, DFSMShsm

-

- Data, storage, and management classes

-

- Define the hierarchical data management

- HFS file system

-

- zFS file system

-

- Define load-parameters for IPL

-

- Define symbols for use in system initialization

-

- Define a configuration for system initialization

- Implement a basic JES2 batch environment

- Identify how work can be started in z/OS and it's relationship to the job entry subsystem

-

- Describe how JES2 prepares and executes work in z/OS

-

- Explain JES2 start options

-

- Describe JES2 parameters that can be customized to support z/OS batch

-

- Identify how communications and control of JES2 can be done using the operator commands and SDSF

-

- Describe JES3 configuration and job processing phases

-

- Identify JES3 start options

-

- Describe the two networking schemes in the z/OS environment: SNA and IP

-

- Identify SNA networking resources

-

- Explain how SNA sessions are established

-

- Describe the role of TCP/IP as a physical filesystem in UNIX System Services

-

- Implement and start a local VTAM instance to provide the base for SNA applications such as TSO

-

- Implement and start TSO

-

- Start a TCPIP stack and check accompanying messages

-

- Identify the main functions of Security Server (RACF) and the role it plays in controlling user access to the system

-

- Describe the contents of RACF user, group, and resource profiles

-

-

- Define a library for procedures

-

- Identify the sysplex resources required to run WLM

-

- List the main components that comprise a WLM service definition for a system/sysplex

-

- Describe the function of WLM service definition parameters such as workloads, service goals, periods, and WLM subsystems

-

- Describe how SMF data set are created and used

-

- Explain SMF record types and how they are used

-

- Identify the three RMF monitor types

-

- Describe how the RMF monitor is used for reporting purposes

-

- Identify System Logger components and usage for:

- Sysplex configuration and CF logstreams

-

- Single system and DASD-only logstreams

-

- Describe SMF usage of logstreams

-

- Describe the differences between IOCDS and IODF

-

- Identify and list the HCD definition process sequence

-

- Describe how the HCD dialogs are used to define a configuration

-

- Discuss the purpose of Hardware Configuration Manager

-

- Describe the overall concept of SMP/E: Global, target and DLIB zones

-

- Describe what elements and SYSMODs are

-

- Describe how RACF profiles are used to authorize user access to a data set resource

-

- Identify two key members used for TCAS startup

-

- Name the components of ISPF

-

- Describe the general layout of ISPF/PDF panels

-

- Describe how UNIX System Services are used in z/OS

-

- Describe briefly the UNIX Shell and utilities and how they are accessed

-

- Describe the application services provided in UNIX System Services

-

- Describe how security is handled in UNIX System Services

-

- Describe the classical z/OS data management

- DASD init: VTOC, VTOC index

-

- ICF catalog creation: BCS, VVDS

-

- MCAT/UCAT

-

- Create an SMP/E working environment

-

- Identify the batch and ISPF interfaces to SMP/E

-

- Install a user function using RECEIVE, APPLY, and ACCEPT

-

- Explain how to remove a SYSMOD with RESTORE

-

- Describe the installation options available to install z/OS

-

- Use the attributes of z/OS elements and features to identify the contents of a z/OS product

-

- Describe the contents of the ServerPac offering and important install documentation sources

-

- List the main steps in the ServerPac build process

-

- Describe hardware and software prerequisites for performing a ServerPac installation in:

- The driving system

-

- The target system

Prerequisites:

You should:

- Have z/OS installation experience or have attended z/OS Installation (ES41A)
- Be familiar with end user activities on MVS, including knowledge of JCL, IDCAMS, the MVS address space structure, and the concept of batch scheduling using JES initiators

Content:

function
- Unit 9 - Hardware configuration definition
- Unit 10 - Software maintenance: SMP/E
- Unit 11 - Change management: ServerPac and other IBM services

- Unit 1 - What makes up a z/OS system?
- Exercise 1- Introduction to z/OS setup
- Unit 2 - System boot: POR and IPL
- Exercise 2 - Complete the IPL: Start JES, start networking
- Unit 3 - Processing user work with z/OS
- Exercise 3 - LOGON into TSO and create a new user profile
- Day 2
- Exercise 4 - Data administration
- Unit 5 - What else is needed for end user access to the system?
- Exercise 5 - Automate startup and monitor the system
- Day 3
- Exercise 6 - System logger
- Unit 7 - A closer look at IPL: IPLPARM, SYS1.PARMLIB, SYS1.PROCLIB
- Exercise 7- Define a string of DASD and ACTIVATE dynamically
- Day 4
- Exercise 8 - Install and maintain a user function
- Unit 9 - Hardware configuration definition
- Unit 10 - Software maintenance: SMP/E
- Unit 11 - Change management: ServerPac and other IBM services

- Unit 1 - What makes up a z/OS system?
- Exercise 1- Introduction to z/OS setup
- Unit 2 - System boot: POR and IPL
- Exercise 2 - Complete the IPL: Start JES, start networking
- Unit 3 - Processing user work with z/OS
- Exercise 3 - LOGON into TSO and create a new user profile
- Day 2
- Exercise 4 - Data administration
- Unit 5 - What else is needed for end user access to the system?
- Exercise 5 - Automate startup and monitor the system
- Day 3
- Exercise 6 - System logger
- Unit 7 - A closer look at IPL: IPLPARM, SYS1.PARMLIB, SYS1.PROCLIB
- Exercise 7- Define a string of DASD and ACTIVATE dynamically
- Day 4
- Exercise 8 - Install and maintain a user function
- Unit 9 - Hardware configuration definition
- Unit 10 - Software maintenance: SMP/E
- Unit 11 - Change management: ServerPac and other IBM services
