

IAPP Foundations of Privacy and Data Protection

Cursusduur: 1 Dag Cursuscode: GDPRESS

Beschrijving:

(English below)

Wet- en regelgeving rondom dataprotectie wordt steeds complexer en iedereen binnen een organisatie heeft een zekere verantwoordelijkheid rondom privacy, of je er nou voor bent opgeleid of niet. Deze training is bedoeld mensen die baat hebben bij een goede basis op het gebied van privacy- en dataprotectie-kennis, omdat de verantwoordelijkheden en risico's voortdurend toenemen, bijvoorbeeld medewerkers op het gebied van Marketing, HR, IT en Finance.

With the ever-growing number of data protection laws and regulations, privacy responsibilities can land on almost anyone's desk with no warning or training. Foundations provides ready-to-go knowledge for staff at any level of your organization to put to work immediately, even without being fully trained privacy professionals. This introductory course allows organizations to cultivate in-house privacy knowledge in operational areas with growing privacy responsibilities, such as marketing, human resources, technology and finance. The course modules even integrate with corporate learning management systems for easy inclusion into existing training programs.

Doelgroep:

This introductory course allows organizations to cultivate in-house privacy knowledge in operational areas with growing privacy responsibilities, such as marketing, human resources, technology and finance.

Doelstelling:

- This comprehensive training course quickly teaches privacy fundamentals to groups and individuals. It provides a practical understanding of basic principles and is excellent preparation for advanced IAPP training and certification testing. It is the first step toward building the credentials needed to join the fast-growing privacy profession.
-

Examens en certificering

Cursusinhoud:

Module 1: Key Privacy Concepts

Introduces learners to the fundamental roles and concepts of privacy and data protection professionals charged with integrating sophisticated information management practices to safeguard personal data, earn customer and stakeholder trust, and meet the business and operational needs of their organizations.

Module 2: Fair Information Practices (FIPs)

Defines the FIPs, explore their origins, examine how they relate to one another to create a framework of data protection, and helps learners interpret them to solve data protection problems in regular work activity.

Module 3: The Data Life Cycle

Helps learners recognize each phase of the data life cycle, understand how each ties to relevant stakeholder needs and expectations, and identify gaps and propose improvements in data life cycle governance within their professional environments.

Module 4: Models for Data Protection Regulation

Examines the models for data protection, key differences between the main models, and their comparative advantages and disadvantages.

Module 5: Major Privacy and Data Protection Laws

Provides an overview of major privacy and data protection laws around the world to help learners better understand the evolving data protection landscape and its current state.

Module 6: Case Studies

Offers real-world examples of companies accused of failing to comply with data protection provisions, as well as success stories of those that worked effectively with regulators to protect personal data.

Module 7: Emerging Topics

Investigates key emerging topics related to data protection, defines a consistent methodology for examining and reacting to an emerging issue, and explores how to identify relevant components of a new topic, assess it and apply privacy principles.
